

[Open Source in Finance Forum](#) is the sole conference dedicated to Open Source in Fintech. We have a **[fantastic lineup](#)**, so **[register today](#)** and join us in NYC on December 8th! (**[FINOS Members join for free!](#)** Get your discount code by emailing **osff@finos.org**)

Why Attend: **Technologists**

FINOS hosts 50+ open source and open standard projects in its **[landscape](#)**, so we've packed three tracks with technology you start using the very next day after OSFF. This year we're launching, in partnership with our sister foundation **[OpenJS](#)**, the **[OpenJS in Finance track](#)** with world renowned speaker from the JS world, a dedicated **[FDC3 & Interoperability track](#)** in reflection of massive growth of the standard, and finally then a **[Hot Topics Track](#)** that addresses everything from supply chain security & SBOMs, to multi & hybrid cloud, to data visualization for the visually impaired.

Why Attend: **OSPOs and Developer Enablement**

This year was the year of the Open Source Program Office (OSPO) in Financial services, with 20+ firms rolling out OSPOs across the buy-side and sell side. But there's still a long tail of institutions that are embarking on the journey. So whether you have formed an OSPO already or you work in the Legal / Compliance department and are trying to grapple with your open source journey, you would not want to miss our **[Open Source Readiness track](#)**. Plus, for financial institutions only, we are also **organizing a financial OSPO Roundtable**, so please reach out to **james.mcleod@finos.org** if you'd like to get an invite..

Why Attend: **Business & Compliance**

Open source goes way beyond code, and the business across sell-side, buy-side, regulators, and all the other constituents is quickly realizing how open collaboration is enabling better interoperability (**[FDC3](#)** anyone?), data standardization (heard about **[Legend](#)**?) and cost savings in key areas like regulation (did you know we had a **[Liquidity Coverage Ratio](#)** implementation?). Make sure not to miss our **[Regulation track](#)** (with FINRA speaking)!

Why Attend: **FINOS projects in action at Project Expo**

If you haven't heard, we've invited members and non-members **to show our community how they are using FINOS projects in production**. We'll have several demos and booths around FDC3, the CDM (Common Domain Model), Timebase, Symphony, and more! An amazing way to expand the "business" understanding of the FINOS landscape and build new connections through our projects.
