

Tres Hornos: Earthen Ovens and Foodways of the Southwest

> RONALD RAEL JUN SUNSERI STEPHANIE SYJUCO

## ANTHRO 196/HUM 295 COLLABORATIVE RESEARCH SEMINAR

Collaborative Research Seminars allow you to work closely with faculty members, graduate students, and undergraduate students across disciplines in seminar-style cohorts and more focused groups. The semester concludes with a presentation, exhibt, or final conference. Courses are open to all majors/disciplines.

Selected students receive a research award; \$500 for undergraduates and \$1,300 for grad students.

Apply online by November 5, 2021, at: https://forms.gle/Pjh9X6CKaLG514Px8

Spring 2022 Th 2:00-4:00pm 2 units GRAD 4 units UNDERGRAD THIS COURSE centers on the design, construction, sustainable use, and experimental variables in archaeological feature visibility of a broadly used food technology, earthen ovens. Known as the horno in the US Southwest, this colonial introduction is the focus of our seminar, experimenting with construction techniques and using them to cook a variety of indigenous and introduced foods. Collaboratively-built hornos will be touchstones for exploring how cultural and historical tradition intersects with contemporary practice via 3D clay fabrication techniques and through the creative lens of installation, land art, and social practice. An attached small-scale garden project will provide a physical connection to ethnobotanical histories. Undergraduate and graduate students from across the univeristy will work together to explore how the friction between empire and indigeneity can create both anxious and productive outcomes. Seminar participants will also participate in hands-on experiences building and cooking and examining archaeological artifacts, among other learning modalities, to think about how colonial food practices shape(ed) contemporary ways of making, cooking, growing, and community building.
