

Import Data into ORA

Step 1: Select one or more files containing table data:

/Users/matthewjennejohn/Dropbox (BYU Law)/Projects/Project Picasso/Data/Delaware Litigation Network/DE 2006 for ORA.xlsx

Parse each file into a separate meta-network  Has header row

Step 2: Configure the columns according to the data they contain:

Columns Row Filter

<b>DATE FILED</b> column contains: Dates Date pattern MM/dd/yyyy	<b>DOCKET NUMBER</b> column contains: General	<b>COURT</b> column contains: General	<b>JUDGE</b> column contains: Node IDs, delimited Nodeset Class: Agent Nodeset ID: Agent Delimiters: / <input type="checkbox"/> space <input type="checkbox"/> tab	<b>ATTORNEY</b> column contains: Node IDs, delimited Nodeset Class: Agent Nodeset ID: Agent Delimiters: / <input type="checkbox"/> space <input type="checkbox"/> tab	<b>STRENGTH</b> column contains: General	<b>LINKTYPE</b> column contains: General
---	--	--	--	---	---	---

Step 3: Define networks and attributes based on the columns:

Networks Networks and Labels Networks combined names Attributes

Source Node ID Judge	Link Value Strength	Network ID Agent x Agent	Link Type LinkType
-------------------------	------------------------	-----------------------------	-----------------------
