It is a book based on facts surrounding the achievements of great American Athletes past & present. The author's research has allowed him to form opinions about these achievements & their durability -- their ability to withstand the onslaught of the athletes of today & tomorrow. These opinions are based on an analysis which considers the physical abilities of the athletes, the rules of the games, the playing conditions, the travel conditions, the sociological factors, & of course the economic factors which prevail in today's sports world. Consider the huge increase in the size of athletes over the years--while the joints remain as vulnerable as ever. Consider rules changes like the designated hitter, & the shot clock. Consider night games, four time zones, artificial surface & expanded schedules. Consider teenage millionaires, agents, & trade unions. Records are made to be broken but some are unbreakable. They're held by guys like Cobb, Ruth, Rose, Uinitas, Chamberlain, Ryan, Ripken, Aaron & others. Order from Marshall Associates, 2019 Forest Drive East, Charlotte, NC 28211-2162; 704-365-5328.

Description:Not only the sign for zero, but also the binary number system, the ideas of metarules, algebraic transformation, recursion, hashing, mathematical logic, formal grammars, and high level language description arose first in India. Panini's grammar for Sanskrit, which is equivalent in its computing power to the most powerful computing machine, has not yet been matched for any other language, while Pingala described the binary number system. This classic book of contributions by the leading scholars in the world presents an overview of these seminal contributions to computer science. It also includes chapters on models and computation in astronomy and cognitive science.

[Down and Out in Paris and London, George Orwell](#) , 2003, 0141187360, 9780141187365. Exposing a shocking, previously hidden world to readers,

Orwell gave a human face to poverty, and in doing so, found his voice as a great writer.

It has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license and is part of the OAPEN-UK research project. The World Trade Organization (WTO) is often accused of, at best, not paying enough attention to human rights or, at worst, facilitating and perpetuating human rights abuses. This book

weighs these criticisms and examines their validity, incorporating legal arguments as well as some economic and political science perspectives. After introducing the respective WTO and human rights regimes, and discussing their legal and normative relationship to each other, the book presents a detailed analysis of the main human rights concerns relating to the WTO. These include the alleged democratic deficit within the Organization and the impact of WTO rules on the right to health, labour rights, the right to food, and on questions of poverty and development. Given that some of the most important issues within the WTO concern its impact on poor people within developing States, the book asks whether rich States have an obligation to the people of poorer States to construct a fairer trading system that better facilitates the alleviation of poverty and development. Against this background, the book examines the current Doha round proposals as well as suggestions for reform of the WTO to make it more 'human rights-friendly'.

[Dream Freedom, Sonia Levitin](#) , 2000, 0152024042, 9780152024048. Slavery still exists in some parts of the world, even in the year 2000. In Sudan, tens of thousands of men, women, and children of the Dinka and Nuba tribes are regularly captured, taken from their homes and families, and forced into hard labor. Based on a true story and real-life contemporary events, this novel tells how a group of students in Denver, Colorado, learns of the atrocities in Sudan, and how they begin to make a difference--raising money to "redeem" slaves and educating others about this dire situation. Award-winning author Sonia Levitin juxtaposes the safe and secure world of an American classroom with the severe hardship of the Dinka people, making Dream Freedom a book that will raise consciousness around the world.

5,000 years of African art reveals its true diversity for the first time. Challenging centuries of misconceptions that have obscured the sophisticated nature of African art, Garlake focuses on seven key regions--southern Africa, Nubia, Aksum, the Niger River, West Africa, Great Zimbabwe, and the East African coast--treating each in detail and setting them in their social and historical context. Garlake is long familiar with and has extensive practical experience of both the archaeology and the art history of Africa. Using the latest research and archaeological findings, he offers exciting new insights into the works native to these areas, and he also puts forth new interpretations of several key cultures and monuments. Acknowledging the universal allure of the African art object, this stunning book helps us to understand more about the ways in which this art was produced, used, and received.

centuries' worth of angling lore and wisdom about trout feeding behavior. Photographic sequence shows in detail how trout take a fly. Examination of flies includes the importance of wings and what they are made of, hooks, soft-hackled flies, and skipping, dapping, and dry-fly techniques. Even after centuries of observation, anglers are still trying to solve the mysteries of that magical instant when a trout takes a fly. *The Rise*, based on recent scientific research into trout feeding behavior and the author's extraordinary photographic studies, provides many new clues. With unprecedented photographic clarity, Schullery reveals the subtleties of the trout's feeding behavior, analyzes the rise forms that puzzle us, and offers startling and reassuring insights into the lessons of rejection. Schullery challenges modern "common knowledge"; reconsiders neglected flies, ideas, and tactics; and faces some of fly fishing's toughest questions with wit, patience, and the happy conviction that the questions are more important than the answers anyway. [Early Software Reliability Prediction: A Fuzzy Logic Approach, Ajeet Pandey, Neeraj Kumar Goyal](#), 2013, 8132211758, 9788132211754. The development of software system with acceptable level of reliability and quality within available time frame and budget becomes a challenging objective. This objective could be achieved to some extent through early prediction of number of faults present in the software, which reduces the cost of development as it provides an opportunity to make early corrections during development process. The book presents an early software reliability prediction model that will help to grow the reliability of the software systems by monitoring it in each development phase, i.e. from requirement phase to testing phase. Different approaches are discussed in this book to tackle this challenging issue. An important approach presented in this book is a model to classify the modules into two categories (a) fault-prone and (b) not fault-prone. The methods presented in this book for assessing expected number of faults present in the software, assessing expected number of faults present at the end of each phase and classification of software modules in fault-prone or no fault-prone category are easy to understand, develop and use for any practitioner. The practitioners are expected to gain more information about their development process and product reliability, which can help to optimize the resources used.

[Truthmakers: The Contemporary Debate, Helen Beebee, Julian Dodd](#) , 2005, 0199283567, 9780199283569. The concept of truthmaking is attracting much attention in contemporary metaphysics. Helen Beebee and Julian Dodd have assembled a distinguished team to contribute brand new essays on the topic: they ask, among other things, how the truthmaker principle should be formulated, whether it is well motivated, whether it genuinely has the explanatory roles claimed for it, and whether more modest principles might serve just as well. This volume will be the starting point for future discussion and research.

[El Cid, God's Own Champion: The True Story of the Knight of Vivar, James Fitzhenry](#) , 2008, 097963010X, 9780979630101. This book is an inspiring biography about an extraordinary Catholic knight chosen by God to save his nation from Islamic aggression. Known by the honorary title of El Cid, Rodrigo Diaz is an epic hero who is relevant to our time. Exiled by his king, insulted and maligned by those who should have supported him, he selflessly fought against seemingly insurmountable odds to save Christian Spain. Commanding the respect even of his enemies, upon his death a Muslim historian acclaimed him a "miracle among the great miracles of the Almighty." The Cid is an example of what can be achieved through devotion to duty, prayer, and trust in God.

[Oxford American Mini Handbook of Hypertension, Paul J. Scheel, Michael Choi, Michael J. Choi](#) , 2010, 0195390563, 9780195390568. Hypertension (chronically elevated arterial blood pressure) is one of the most common disorders worldwide. In the U.S., hypertension affects 1 in 4, or upwards of 50 million adults with only 70% being aware of their diagnosis. Hypertension is tightly linked with cardiovascular risk and fatal outcomes. One of the dangers of hypertension is its asymptomatic nature, as untreated hypertension can result in increased cardiac output, heart volume, and damage to arteries and vessel walls. This succinct pocket volume aims to provide primary care practitioners and other healthcare professionals with essential, evidence-based guidance on the diagnosis and management of hypertension. Written by noted experts in the field, with a foreword by the former president of the American Society of Hypertension, this volume is focused on providing key insights into choosing the appropriate treatment regimen for each patient, as well as direction on proper patient monitoring for safety and effectiveness of various interventions. To that end, the volume features numerous tools, such as forms, charts, graphs, and algorithms to assist the busy clinician in providing the best care for their patients with hypertension.
