

NERVE FUNCTION

Many things can impair your nervous system and interfere with its function.

Cranial Involvement	Cervical Involvement	Thoracic Involvement	Lumbar Involvement	Sacral Involvement	The effects of nervous system dysfunction can be caused by several areas of the spine. Do you know anyone experiencing:

♦ PLEXUS The major Plexuses serve as "junction boxes" to collect and distribute nerve impulses from the central nervous system.
* The cranial nerves are part of the brain stem, which extends down into the cervical spine.
Due to the complexity of the nervous system, only the most basic anatomical and physiological relationships are shown.
