Sunday, December 7, 2014
12:00pm – 2pm

Gilbert Residence, 203 South Huron Street, Ypsilanti, MI 48197
(734) 482-9498, <http://www.gilbertresidence.com/>

The last century of farming practices has taught us that forcing out the most produce possible at any cost has a long term drawback – decreased soil and crop quality. Today, our fruits and vegetables have only a fraction of the nutrients they had even 100 years ago, and without these essential nutrients, our health is inevitably impacted, and chronic illnesses continue to rise...

How can we return nutrient dense food, or food with high levels of bionutrients, to our markets, gardens, and farms?
