

Experiment: Iteration 1

- Pair up: one will be tester, one programmer
- Sit back to back so you face away from each other
- Tester gets a drawing which needs to be replicated
- Tester tells the programmer what to draw, all at one time.
- Programmer draws the shapes based on what the tester explained.
 - No talking during 'coding'!
- Tester "tests" the drawing, reports "bugs" on index cards
- Programmer fixes the "bugs"
- How long did it take? Will the customer be happy?

Experiment: Iteration 2

- Collaborate!
- Tester tells programmer what to draw, watches the programmer draw, answers questions, points out 'defects' for programmer to fix immediately
 - (Don't show the programmer the drawing, that makes it too easy, we're trying to simulate real coding)
- How long did it take? Will the customer be happy?

Thanks to the members of the agile-games group and Kane Mar for ideas & pictures for this game
