Princeton University Archives

v. 2.2 2015 June 30

About: The purpose of this optional step is to create a forensic disk image of digital media acquired by the Library. A forensic disk image will allow Library staff to 1) regenerate a bit-for-bit copy of a drive or disk and 2) mount the drive or disk as a read-only filesystem, from which staff can explore or extract data. **Important: not all media warrants imaging.** As a general practice, the Library creates disk images for internal hard drives, floppy disks, zip disks, and DVD's, but does not create them for external hard drives, USB drives, and CD's.

- 1. Click on Guymager from the side Desktop ribbon.
- Right click on the desired device and select Acquire image.
- 3. The Acquire image dialog box will appear. In the File Format section:
 - Select the Expert Witness Format.
 - In the **Examiner** field, type your name.
 - In the Description field, enter the accession number and disk number. <u>For example:</u> "AR.2015.001_Disk001"
 - In the Notes field, enter the information you previously transcribed from the disk label into AT field User Defined Text 3.
- 4. In the **Destination** section:
 - Under Image Directory field, click the ellipsis to browse to the accession's images folder.
 - Under Image filename, enter the Accession
 Number followed by an underscore and the disk number. For example: "AR_2015_001_Disk001"
- 5. In the **Hash calculation / verification** section, ensure that the following boxes are checked:
 - "Calculate SHA-256"
 - "Verify image after acquisition (takes twice as long)"
- 6. Click Start.
- While the imaging is taking place, a dialog box will appear that reports on the image's progress and speed.

- 9. Close Guymager. Safely unmount and disconnect the drive or device. If you have more disks in the accession, return to the **Running a Virus Scan** step. If you have no more disks, proceed below.
- 10. Make an appropriate entry in the AT accession record noting the results of the imaging process. See separate log entry documentation for language to use.
