

Summary

On July 14th, 2015, at 17:55, I get these two results in my app Carthago alternating after each other, approx.. 10 times. After that, it stabilizes to scenario A.

A

B

5-ZGX-02 (Dirk van Hasseltssteeg 13 in B)

7-ZFB-05 (correct in both)

2-ZGX-64 (Eerste Weteringplantsoen 22 in B)

5-ZDR-50 (Missing in A)

7-ZFB-05 (correct in both)

2-ZFG-98 (Valschermkade 21 in A)

Below, you see the summary of the corresponding results of the webservice calls to your API, which I logged during the testing.

In green, the correct results. In yellow, the incorrect ones. The addresses in yellow are not even in the neighbourhood of the green ones.
