Bandar Seri Iskandar,
31750 Tronoh,
Perak Darul Ridzuan

MOHAMAD ABD. HAFIZ No KP 880824 - 01 - 5415
22 years old, malay, male

Problems:

Post-trauma (25/5/2011): Jumped down from a cliff into a shallow area at the beach, sustained:

- 1) Burst fracture at level C6
sustained bilateral lower limb weakness + numbness since incident
- 2) Post Operation day 20 (9/6) of anterior plating of C6 spine with strut bone grafting
Finding:
Burst fracture at C6
EBL 400ml
- 3) Skin lesion - ?infection / ?allergic reaction to EES
- 4) UTI
Urine C+S - pseudomonas aeruginosa
On ciprofloxacin

currently patient on soft collar. There had wound over the buttock and right heel and needed for EOD dressing with coloplast patch and douderm patch. He was under rehabilitation tea, OCT and physiotherapy review.

Rehabilitation goal:

To prevent deconditioning
To prevent complications of prolonged immobility
for carer training
reduce carer burden

Kindly to concern the rehabilitation facility and patient need.

Thank you.
