

CNC FIXTURING

COMPOSITE FINISH NAILS & BRADS FOR CNC FIXTURING

RED HAWK 18GA AND 15GA FINISH NAILS ARE IDEAL FOR USE WITH CNC MACHINES FOR CUTTING, CARVING, DRILLING, AND MACHINING THROUGH ALL SORTS OF MATERIALS WITHOUT DAMAGING ROUTER BITS, DRILL STEEL OR SAW BLADES. NAIL YOUR MATERIAL DOWN ON YOUR SPOIL BOARD AND START. RED HAWK COMPOSITE NAILS WILL HOLD DOWN YOUR WORK. STACK YOUR MATERIALS AND INCREASE YOUR PRODUCTION OUTPUT; RED HAWK IS YOUR BEST SHOP ASSISTANT.

FEATURES:

- 100% steel and metal free
- Eliminates the need for clamping tools and screws
- No removal necessary
- Router bit safe
- Can be painted and stained

BENEFITS:

- Red Hawk composite fasteners will not rust, corrode or stain woodworking projects.
- Red Hawk composite fasteners hold 2X stronger than similar sized steel nails; a 3/8" penetration into your substrate will provide maximum holding power
- No clamping set up or waiting around. Just nail it and start.
- Red Hawk composite fasteners can be machined like the material it is driven into and will not damage sanding belts, blades, or bits.
- Red Hawk composite nails eliminate the fear of accidentally nicking steel fasteners during the cutting cycle.

INCENTIVES:

- Composite nails have zero adverse effect on final product appearance or performance.
- Production facilities will save capital investment dollars by reducing production downtime and from additional wear and tear on sanding belts, saw blades and router bits.
- Creating a **steel-free** zone within a wood products facility safely increases productivity and net output which increases net profit.
