

Page not found (404)

No pet found matching the query

Request Method: GET

Request URL: http://127.0.0.1:8000/pet/slug

Raised by: pet.views.PetDetailView

Using the URLconf defined in `pet_memorial.urls`, Django tried these URL patterns, in this order:

1. `admin/`
2. `[name='home']`
3. `pet/ <slug:slug> [name='pet_details']`

The current path, `pet/slug`, matched the last one.

You're seeing this error because you have `DEBUG = True` in your Django settings file. Change that to `False`, and Django will display a standard 404 page.
