Dabur India (DABUR)

Consumer products

Getting into the big league. We initiate coverage on Dabur with a BUY rating and target price of Rs200 based on 26X FY2011E EPS. We estimate an EPS CAGR of 26% over FY2009-12E led by (1) new product launches in skincare, (2) likely ramp-up of brand innovations in FY2010-12E, (3) scaling-up of Uveda and Femcare brands and (4) likely mix improvement due to faster growth in skincare and shampoo.

We like Dabur for several reasons—expect 15% upside by March-2011E

We initiate coverage on Dabur with a BUY rating and target price of Rs200, implying a potential 15% upside. We estimate EPS CAGR of 26% over FY2009-12E. Our target multiple is based on a 20% premium to the last three-year average P/E of 22X. We believe Dabur deserves a premium to its historical multiple as (1) the company is entering a period of multi-year, predictable growth in skincare, shampoo and foods and (2) it is the only pure-play, listed personal care company with a strong presence across a range of personal care categories.

Improving mix and modest operating leverage leads to likely 26% PAT CAGR over FY2009-12E

We model net sales CAGR of 20% during FY2009-12E. We expect the contribution of faster growing categories (international, skin care, shampoo and foods) to improve to 45% of sales in FY2012E from 41% in FY2010E. We expect modest operating leverage over FY2010-12E (fixed costs are ~20% of sales) and estimate 26% PAT CAGR over FY2009-12E.

Categories to watch—skincare, shampoo, foods

We believe skincare, foods and shampoo hold immense potential for Dabur in the medium term. The differentiators are (1) ability to straddle the pyramid in skincare (Uveda—top end, Femcare—mid segment and Gulabari—mass market), (2) functionally differentiated herbal positioning in shampoo and (3) expansion of their fruit beverage range (hitherto restricted to fruit juices) to include fruit drinks (fruit flavored). Over FY2009-12E, we expect the skincare, shampoo and foods categories to post sales CAGR of 27%, 21% and 21%, respectively.

Key risks-limited pricing power, confused diversification and North Indian skew in sales

The key worries/risks are (1) Dabur is not a market leader in many categories, (2) its focus appears diluted—no single category accounts for more than 20% of sales, (3) the company has limited pricing power, which makes it vulnerable to input cost inflation, (4) heavy dependence on North India (35% of sales) and (5) confused diversification strategy as evidenced by soaps and retail forays.

BUY

FEBRUARY 11, 2010

INITIATING COVERAGE

Coverage view: Attractive

Price (Rs): 175

Target price (Rs): 200

BSE-30: 15922

Growth opportunity in most categories

| Category | Potential growth | Market share | Comments |
|------------------------|------------------|--------------|--|
| Baby oil and skin care | | | We assign high probability to the success of Gulabari extensions and Fem Care. While we are excited about initial success of Uveda, we are conservative about the medium- term growth due to Dabur's limited success in launching premium products |
| Consumer Health care | | | Small but profitable part of Dabur's portfolio. We model sales CAGR of 19% over the next two years driven by planned marketing efforts in urban areas and increased investments |
| Digestives and candies | | | Low growth category. Dabur sales have grown at CAGR of 7% over the last two years. Flagship brand Hajmola is synonymous with the category. We model sales CAGR of 11% over the next two years driven by the gains in distribution |
| Foods | | | We are bullish about the prospects of Burrst. The company has leadership position in the fruit juice segment and we expect it to replicate the same in fruit drinks (given that the focus is on driving in home consumption of fruit drinks) |
| Hair oil | | | Largest segment of Consumer Care Division. Primarily present in amla based hair oil. In our view, the recent entry in the high growth light hair oil market is a significant positive |
| Health supplements | | | Low growth category in the past. However, low penetration levels augur well for higher penetration-led growth |
| Home care | | | Small part of Dabur's sales mix. The segment has seen limited investments and advertising spends unlike the oral care portfolio of Balsara. We maintain conservative sales CAGR estimates of 9% between FY2010-12E |
| International Business | | | Stellar performance with sales CAGR of 32% (highest in the Dabur portfolio) over the last two years. We like Dabur's region specific product development and marketing approach and model sales CAGR of 22% over FY2010-12E |
| Shampoo | | | Presently a small player in the shampoo market. We are bullish on Dabur's prospects in this segment, given the low level of penetration and its niche herbal formulation positioning (which has no meaningful competition). We expect sales CAGR of 20% between FY2010-12E |
| Toothpaste | | | We believe that Dabur's launch of Babool gel variant at white toothpaste price point will act as a catalyst in gaining market share from other organised players. This coupled with low penetration levels augurs well for the company. We model sales CAGR of 15% between FY2010-12E |
| Toothpowder | | | The toothpowder portfolio has grown at a CAGR of 2% over the last two years. We model a sales decline of 4% CAGR over FY2010-12E as consumers continue to switch from toothpowder to toothpaste |

Strategy

Alpha Bet

INDIA

FEBRUARY 10, 2010 NEW RELEASE BSE-30: 15,922

Reading the alphabet soup. We initiate four long-short trades—(1) Long Tata Steel, Short Hindalco, (2) Long JPA, Short ACC, (3) Long ONGC, Short Cairn and (4) Long HDFC Bank, Short Axis Bank. We expect our recommended trades to deliver a gross relative return of 8-10% over the next three months.

Trade #1: Long Tata Steel, Short Hindalco

We recommend buying Tata Steel stock as the stock has fallen 14% over the past 15 days without any real change in the fundamentals of the company. Steel prices are largely unchanged over this period. On the other hand, aluminum prices have corrected 10% over the past 30 days and we do not rule out further correction. Current global aluminum prices at US\$2,023/ton are well below our FY2011E assumption of US\$2,200/ton, which poses large downside risks to our FY2011E earnings estimates of Hindalco.

Trade #2: Long JPA, Short ACC

We recommend a Long JPA, Short ACC trade to take advantage of (1) JPA's more attractive valuations relative to ACC's, (2) lower impact of likely decline in cement prices on earnings and fair valuation of JPA due to its diversified portfolio of assets versus ACC's reliance on cement only and (3) strong growth in cement volumes of JPA in the next two quarters that may provide a hedge against likely decline in cement prices; ACC's cement volumes will likely remain stable over the next two quarters.

Trade #3: Long ONGC, Short Cairn India

We recommend a Long ONGC, Short Cairn trade to derive relative out-performance from (1) likely decline in crude oil prices in 2QCY10 from 1QCY10 levels, which would be a temporary negative for Cairn stock; second quarter of a calendar year is typically the weakest quarter for global oil demand, (2) potential negative impact of cess on crude oil on valuations of Cairn; the street may be gradually starting to factor this potential negative development and (3) possible positive developments for ONGC from partial deregulation of the oil sector.

Trade #4: Long HDFC Bank, Short Axis Bank

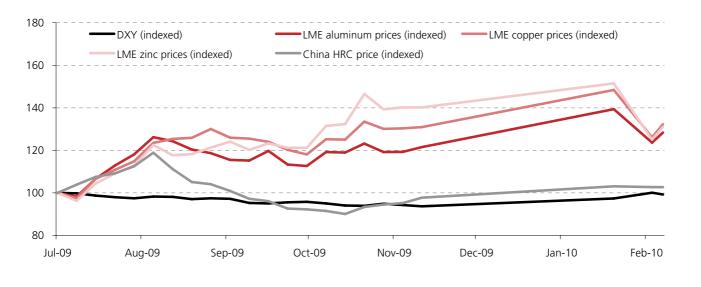

We expect HDFC Bank (HDFCB) to outperform Axis Bank in the short term due to (1) likely strong growth in HDFC's loan book and strong 4QFY10E results, (2) HDFC's higher CASA ratio compared to Axis's that may result in higher margin and earnings growth in an environment of higher interest rates and (3) low concerns about HDFC Bank's loan book versus possible issues in Axis's larger corporate exposure.

Quarterly CASA ratio for Axis Bank and HDFC Bank (%)

Source: Company, Kotak Institutional Equities

HDFC Bank (HDFCB)

Banks/Financial Institutions

Best bank stock in the current environment. We believe that banks with strong retail and CASA deposit franchisees are best placed at times of rising rates. HDFC Bank has been the best bank in terms of CASA growth and asset quality over the past few quarters. We believe above-industry loan growth (20%+), 4%+ margins and lower provisioning should drive 30% PAT growth over the next 6-8 quarters. We upgrade our recommendation on HDFC Bank to BUY (from ADD earlier).

Company data and valuation summary HDFC Bank

Upgrade to BUY notwithstanding expensive valuations

While valuations for stock remain expensive at 19XFY2011E PER and 3XFY2011E, we believe that likely strong earnings growth of 28-30% over the next couple of years coming from core operational earnings, improving asset quality and better than industry growth is likely to sustain these high valuations. The stock has underperformed by 3% over the past three months and outperformed marginally over the past month. Given the strong economic outlook, against the backdrop of high government deficit, we expect interest rate environment to remain challenging. HDFC Bank is one of the best banks to own in such an environment given its strong core liability franchise; upgrade our recommendation to BUY.

Trades at a premium to peers supported by good operational performance

We are extremely impressed by HDFC Bank's recent operational performance—excelling on all key parameters. Margins improved sequentially by 10 bps to 4.3%, driven by strong traction in CASA deposits (up 38% yoy and CASA percentage now is 51%). We expect margins could further improve if interest rates rise as HDFC Bank's high CASA franchisee would ensure lower deposit costs. The pace of new NPL formation has peaked, which is likely to result in lower absolute NPLs (only bank to report absolute lower NPLs, both at gross and net level over last couple of quarters) and credit provisioning requirement going forward. The quality of earnings has improved vastly as earnings are being driven by core performance with negligible treasury contribution.

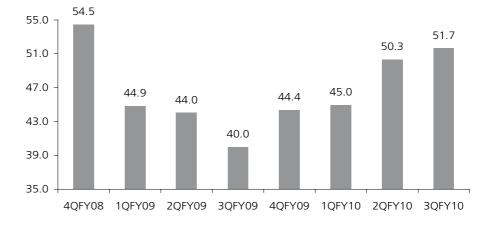

Superior CASA franchise to ensure strong margins in a rising rate environment

HDFC Bank has always had a strong edge in its strong CASA franchise. Over the past few quarters, CASA deposit growth has been spectacular for the bank; savings deposits grew by 41% yoy to Rs467 bn and current deposits grew by 34% yoy to Rs333 bn as of December 2009—this is the best in the industry. The reported CASA ratio has increased to 51%, while the core CASA ratio was at 49%, up from 40% last year. With interest rates set to rise, the power of the CASA franchisee is likely to be reflected in superior margins and a steady loan growth. We expect margins to improve by 20 bps in FY2011E over FY2010E (as per our model). This is despite a likely increase of 15 bps in deposit costs due to daily average working for savings deposits.

Management wants to grow faster than the industry

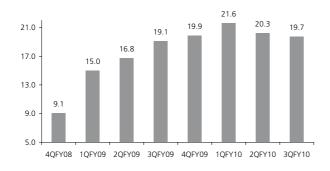

The management has highlighted its strategy of growing loans by 3-5%, higher than industry growth. In FY2010E, HDFC Bank is likely to grow its loans by about 20% and we expect 25% growth in FY2011E. The bank has been gaining market share in the secured retail products segment as most other banks had slowed down. Buyback of mortgages from HDFC will also drive incremental loan growth in this segment. Further, HDFC Bank has a limited presence in project lending and has largely focused on working capital-related business in the past. With a pick-up in economic activity, the management now finds sufficient opportunities to grow at a rapid pace on the low base for project-related activities as well. We believe the proportion of mortgages and project-related loans will increase over time although retail and working capital loans will continue to dominate its loan book.

NPLs have peaked—expect positive traction

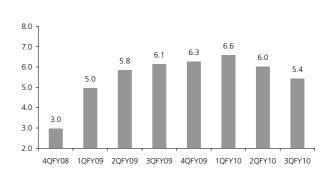

The bank has managed its asset quality in the best possible manner—keeping its net NPLs at 0.4%-0.6% and gross below 2%. Incremental delinquencies are already declining and absolute NPLs (both gross and net) are declining over the past couple of quarters. Delinquency rates have declined from 2.1% in 1HFY10 to 1.2% in 3QFY10. The total restructured assets for HDFC Bank were just at 0.4% of the loan book.

Declining delinquency rates would result in a much lower provisioning requirement over the next few quarters and this could support earnings significantly. Historically, the bank has been providing about 200 bps of loan loss provisioning, which we expect will decline now, also aided by the fact that loan book composition is changing towards more secure assets.

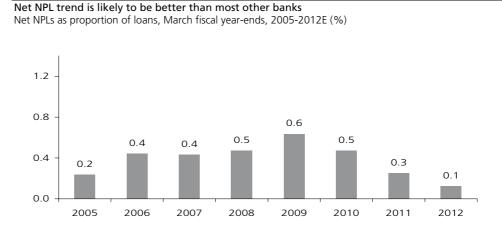

Net NPLs are declining even faster Net NPLs, March fiscal year-ends, 4QFY08 – 3QFY10 (Rs bn)

Cost/income leverage is currently playing out

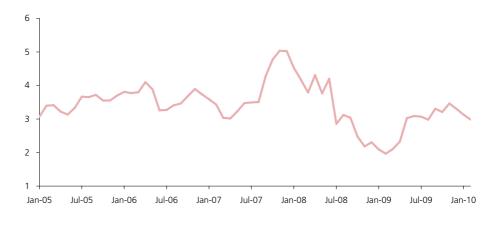

Post the CBoP merger, the management's strategy of right sizing its operations and redeploying manpower more effectively appears to be paying dividends. Better efficiencies in other operations are also contributing to lower cost-income ratio over the past few quarters. Costs are likely to rise on the back of increasing wage and rental costs, however, we expect cost-income ratios to be maintained at near 47% as income growth is also likely to gather momentum. We expect this trend of better productivity gains to continue for the next few quarters and drive earnings growth for HDFC Bank.

Banks/Financial Institutions

India

RBI's 'base rate' proposal likely to increase transparency and reduce return fluctuations. RBI's draft circular on base rates for banks seeks to replace the prevailing BPLR system. We see a better credit pricing environment led by key recommendations, primarily (1) greater transparency in pricing of loans, (2) less leeway for banks to lend below their benchmark rates and (3) greater deregulation of interest rates. We believe this is likely to reduce fluctuations in the reported NIM of banks over a period of time.

RBI seeks to alter the credit pricing environment.

RBI's draft guidelines on replacing the existing benchmark prime lending rate (BPLR) with the base rate system has suggested measures to improve the monetary transmission mechanism in the country and make credit pricing more transparent.. Key likely implications

- Market rates to respond faster to monetary policy. We believe the base rate concept would result in swifter changes in market interest rates and banks would be forced to review their interest rates quickly while lowering- and while increasing lending rates.
- Reduce competitive pressures to grow balance sheet—positive for public banks. We believe many banks resort to offering lower interest rates in order to grow their balance sheets at quarter/year ends. The base rate system would mean that banks will not be able to offer loans below their overall costs, which include deposit costs, negative carry on SLR and CRR, operating costs and credit costs and also targeted returns. Thus, the competitive pressures to increase balance sheets are likely to reduce and credit pricing, especially for top rated companies, is likely to be rational in the market place.
- Private banks may see a sharper reduction in their base rate from their current PLR. We believe private banks are likely to see a sharper reduction in the base rate from the current PLR as their PLRs are higher than public banks. In the medium term, this could result in private banks (primarily Axis and HDFC Bank) having lower base rates than many smaller public banks (mainly on account of their higher CASA ratios). However, these banks can charge a higher differential over their base rate thereby earning higher their targeted RoEs.
- ➤ Await clarity from RBI / bankers. The base rate system is likely to enhance transparency, however, we await more clarity on certain assumptions like (1) perception of credit quality may be different for various banks and could change arbitrarily at times—this could result in large pricing differences; banks do not have sufficient credit history to workout the optimum credit spreads in a scientific manner, (2) differentiating on many costs might be difficult, especially for public banks and their MIS systems might be tested for this, (3) the role of trading gains and fee income in order to achieve the targeted RoEs is not clear.

ATTRACTIVE

FEBRUARY 11, 2010 UPDATE BSE-30: 15,922

Highlights of the draft guidelines

(1) Banks to declare their base rates after factoring the base costs which are common to all categories of borrowers. This rate is expected to include the following elements: (a) interest rate on total deposit costs (b) adjustment for negative carry on CRR and SLR, (c) un-allocatable operating expenses and (d) target RoE.

(2) The individual borrower rates are supposed to include the specific operating expenses, credit risk premium and premium to account for the tenure of the loans.

(3) The new system of credit pricing would be applicable for all new loans and all loans that would come up for renewal. However, banks and borrowers are given the leeway to renegotiate their terms of agreement if they decide.

(4) Interest rate regulations on loans less than Rs0.2 mn have also been proposed to be deregulated, wherein the ceiling currently is BPLR. RBI is likely to provide more clarity on export credit and few other priority sector loans where the rates are currently fixed.

(5) Banks would need to review their base rates at least once a quarter and widely disseminate this information. The final proposals are expected to be issued after receiving feedback from market participants.

Automobiles

India

Auto tracker: Period under review—January 2010. Passenger vehicle sales touched all-time highs at over 160,000 units for January. Maruti is operating close to its stretch capacity utilization of 115%. Ashok Leyland saw its volumes bounce back 36% from December and seems to be on track to do over 25,000 units in 4QFY10E. CV volumes are expected to hit close to peak levels in the quarter on pre-buy. 2-wheeler volumes were up 10% for the industry from December, in line with seasonal trends.

Mahindra achieves a 7% share of scooter market in 10 months; plans expansion into motorcycles

2-wheeler sales increased 9% sequentially in January, in line with seasonal trends. Hero Honda's volumes were up 4% sequentially and came in slightly stronger than expected. Bajaj's domestic motorcycle volumes also grew at a stronger-than-expected 22% rate from December. HMSI volumes were stable at 110,000 units in January and the company seems to have started shipping its 110cc bikes to dealers. Mahindra Two-wheelers Ltd volumes crossed 10,000 units for the month and share is now at 7% levels. The company plans to expand its product portfolio to motorcycles. Hero Honda's motorcycle share declined 900 bps yoy and 310 bps sequentially while Bajaj gained 13% points of share yoy against some very easy comparisons.

Domestic passenger car sales grew 27% mom as Maruti replenished low dealer inventory

Industry car sales grew 34% yoy. Volumes were up 27% mom, in line with past seasonal trends. Maruti saw its share decline 500 bps on a yoy and sequential basis as the company's domestic volumes grew 21%. Tata Motors saw strong sequential sales growth of 60% in the passenger car segment on the back of new products. Tata Motors gained 210 bps of share on a yoy basis, with bulk of the share gains coming from the mid-size segment, where the company launched the Manza.

CV industry volumes grow 10% sequentially while Ashok Leyland sequential growth at 36%

Industry CV sales were up 10% from December and seems to be reflecting pre-buy demand. We expect CV volumes to pick up further in the seasonally strong 4Q and we could see volume runrate touch the highs seen in FY2007-08. Tata Motors' CV market share declined to below 60% in January. In the LCV market, Tata Motors' market share is down to the 55% range from over 60% share in 1HFY10. New alternate products from the likes of Mahindra seem to be taking share away from the Ace and this trend could continue going forward.

3QFY10 earnings mixed with divergent trends on margins; volume-wise, all eyes are on the budget

We started to see raw material cost pressures building up on most companies and margins starting to trend down. Maruti, Hero Honda and Bajaj bucked the margin trend on the back of operating leverage, nevertheless, we expect commodity costs to bite deeper into margins depending on the timing of contracts. As a result, we continue to believe earnings growth in FY2011E would trail volume growth given margin pressures. On the subject of volume growth, all eyes are on the budget, with respect to excise duty rates. We believe a 2% point increase is largely expected. We don't expect to see difficulty in passing on the increase but this could impact demand at the margin. We remain selective and prefer Bajaj Auto over Hero Honda in the 2-wheeler universe. We see a lot more headwinds for Maruti—excise increase, competition, weak export markets and appreciating yen—and prefer M&M instead. We like CV manufacturers as we expect CV sales to remain strong on good industrial production trends, emission-related pre-buy and low penetration in the LCV space.
