Infosys Technologies (INFO)

Technology

Focus on growth, not rupee. Broad-based double digit sequential revenue growth, increase in realization, further improvement in client metrics and increased off-take for discretionary services once again reaffirm Infosys' execution and significant improvement in demand environment. We increase our FY2012E EPS estimate by 2.2% to Rs153.4 despite an adverse change in our Re/US\$ assumption. We maintain our BUY rating with end-FY2012E DCF-based target price of Rs3,400/share.

Excellent guarter; meets and, on most parameters, beats expectations

Infosys reported a strong guarter on all parameters beating our higher-than-consensus revenue, EBITDA, and net income estimate for the guarter. Double-digit (10.2%) sequential revenue growth to US\$1.5 bn beat our estimate by 0.9%. Even as EBITDA margin came in 30 bps below expectations, absolute EBITDA and net income both beat our estimate by 0.7%. More importantly, several reported operational metrics indicate likely sustenance of demand momentum - we discuss the same below.

Unequivocal verdict on the strength of demand environment

Infosys' Sep 2010 quarter revenue performance validated our thesis on the strong demand environment for offshore IT services (especially the Tier-I players). More important, however, are the underlying demand metrics, which should allay any undue fears on the strength and/or sustainability of the strong demand. Sample these -(1) growth was broad-based across verticals, geographies, and service lines, (2) strong traction in the hitherto pockets of weakness; for example, European revenues grew 15.6% qoq in constant currency, (3) strong mix in discretionary-spendled service lines (package implementation, consulting, SI), (4) robust large deal signings (transformational as well as global sourcing), (5) six F/G-500 account signings; the company has just come out of its strongest year of 'must have' account signings (24 in FY2010), and (6) robust revision in FY2011E US\$ revenue growth guidance (to 25% from 21%).

Strong growth will take care of margin challenges (Re and otherwise); reiterate BUY

Our EPS estimate for FY2012E is up 2.2% to Rs153.4, despite building in a 3.2% stronger Re versus the US\$ against our previous estimate. This has been driven by a 4.9% upward revision in our FY2012E US\$ revenue estimate. We see upside risks to even our revised revenue growth estimates (27.4%, 24.6%, and 21.3% in FY2011E, 12E, and 13E, respectively) - we reiterate our view that the Indian IT services industry is not in a demand-constrained environment. We raise our end-March 2012E DCF-based target price to Rs3,400/share and reiterate our BUY rating on the stock. Valuation at 20X FY2012E EPS appears rich but has to be viewed in the context of earnings upgrade potential.

BUY

OCTOBER 15, 2010 RESULT Coverage view: Attractive Price (Rs): 3,076 Target price (Rs): 3,400 BSE-30: 20,125

Kotak Institutional Equities Research kotak.research@kotak.com Mumbai: +91-22-6634-1100

Strong quarter on revenues

Infosys reported 10.2% sequential revenue growth to US\$1,496 mn, 0.9% higher than our expectation. Revenue performance was buoyant, whichever way one looks at it. Revenue growth was led by verticals such as retail (+20% qoq), energy and utilities (+16% qoq) and services (+19% qoq). Among geographies, Europe grew 18% qoq, and among service lines, growth was led by package implementation (+14%) and systems integration (+50% qoq). Even the telecom vertical, which continues to drag, grew 4% qoq.

Margins disappoint, just a tad

Margin performance was a tad below expectations, however. In a quarter with 10% US\$ revenue growth, 2% Re depreciation benefit, utilization improvement, and benefits from lower visa expenses/ bad debt provisions, a 170 bps qoq EBITDA margin improvement is clearly below par. This reflects the ongoing supply-side challenges facing the industry, also reflected in the 22% quarterly annualized attrition reported by Infosys (an improvement from 28% in 1QFY11, but high, nonetheless). On the positive side, Infosys did indicate sustained improvement on this front through the quarter and expects attrition to trend downwards. The company is also effecting promotions in the Dec 2010 quarter for roughly 12,000 employees out of a total of ~122,000.

Business momentum unmistakable

Infosys' 2Q earnings report presents several indicators of the strong volume momentum for the Indian IT services industry (more for the Tier-I players, in our view) –

- Fourth consecutive quarter of robust sequential volume growth (7.1% consolidated, and 7.2% for IT services in 2QFY11),
- A good 3%pts increase in constant currency FY2011E revenue growth guidance (4%pts in US\$ terms to 25% from 21% earlier), after the 4%pts raise in the previous quarter,
- Strong (but conservative, in our view) 3.4-4.4% US\$ revenue growth guidance for the seasonally weak December quarter,
- Strong client metrics number of US\$100 mn client relationships increased to 10 from 8 in the previous quarter; it has in fact grown by 4 in the past two quarters,
- Growth was led by discretionary service lines like PI, SI, and consulting indicates increasing client confidence in committing to longer-term IT investments, and
- Largely broad-based growth (with no apparent weakness except the telecom vertical, which continues to suffer from client-specific issues).

Infosys' 2QFY11 earnings report increases our confidence on the strength of demand environment for the Tier-I Indian IT services companies. It reflects in the 1.9% and 4.9% upward revision in our FY2011E and FY2012E US\$ revenue estimates, respectively. We see upside risk to our revenue estimates for TCS and Wipro as well.

FY2011E EPS guidance conservative; conservatism continues to baffle

Infosys has revised its FY2011E EPS guidance to Rs115.1-117.1 from Rs112.2- 116.7 earlier and US\$ revenue growth guidance to 24-25% from 19-21% earlier. Revised guidance is based on the assumption of operating margin decline of 130 bps and a Re/US\$ rate of 44.5 for the rest of the year (~Rs45.27 for FY2011E). The company has upped its gross hiring guidance to 40,000 from 36,000 earlier.

We have been baffled by the painfully obvious conservatism in Infosys' guidance several times. The 25% US\$ revenue growth (upper-end) guidance for FY2011E and 4.4% qoq US\$ revenue growth (upper-end) guidance for 3QFY11E implies 1.4% qoq revenue growth in the Mar 2011 quarter. Even better, the lower-ends of FY2011E and 3QFY11E guidance imply a flat March 2011 quarter and we do not even want to talk about what the upper-end of 3QFY11E revenue guidance and the lower-end of FY2011E revenue guidance imply.

Similar conservatism also reflects in the muted 0.3% revision in the upper-end of Re EPS guidance for FY2011E. A simple reverse calculation (based on guided revenue, EBITDA margin, & PAT, and assuming conservative depreciation and other income figures) suggests that the company is building in a 28%+ tax rate for 2HFY11E (see Exhibit 3).

Other details

- The company has announced a special dividend of Rs30/share to celebrate its 30th year of operation (in addition to a normal dividend of Rs10/share).
- Attrition continues to be high, though the trend suggests improvement. Quarterly annualized attrition was 22% versus 29% in 1QFY11.
- Offshore realization declined (in constant currency terms) for the 8th consecutive quarter.
- Subsidiary performance improved substantially qoq; Australia, China, and consulting were strong, in particular.

Shree Cement (SRCM)

Cement

Leveraged to petcoke? We recently met the management of Shree Cement to get a better perspective of their evolving business structure. The company is investing progressively to build a sizeable power portfolio and faces risks to earnings from higher pet coke prices—coke is currently is the key fuel source for Shree Cement's cement and power businesses. We reiterate our BUY rating on SRCM with a revised target price of Rs2,400/share taking cognizance of the increase in petcoke prices.

Pet coke prices raise concerns, but technology investments offer flexibility

The recent spike in pet coke prices has raised concerns on the fuel security for SRCM given its increased dependence on the fuel for the expanded power capacities. We note that while rising prices of fuel do not augur well for earnings of SRCM, investment in CFB boilers give SRCM the flexibility to switch to alternative fuels (see Exhibit 7). We concede that dependence on market-price for both fuel and power tariffs increases the risk to earnings, however, we like SRCM's strategy of investing in power capacities to (1) de-risk the earnings from the cyclical nature of the cement business, (2) capitalize on tax benefits available to captive power plants, and (3) benefit from lucrative merchant tariffs in the short-term market,.

In this note, we discuss the economics of pet coke versus other fuels in detail. We note that 5% higher pet coke prices in FY2011E could impact SRCM's valuation by ~7% (See Exhibit 2).

Capacity addition targets on track, capex of Rs12 bn incurred in FY2010

SRCM has incurred a capex of Rs12 bn in FY2010 (Rs5.4 bn in FY2009), out of which, Rs6.1 bn was spent on power capacities while the balance Rs5.7 bn was spent on cement business. We believe power will continue to drive the near-term capex of SRCM as the company plans to add another 350 MW by end-FY2012E. During the year, SRCM added ~90 MW of generating capacity including a 46 MW of waste heat recovery plant. SRCM also commissioned 2 grinding units aggregating 3 mtpa during FY2010, taking its total installed cement capacity to 10.2 mtpa.

Maintain BUY with a target price of Rs2,400/share

We reiterate our BUY rating on SRCM with a revised target price of Rs2,400 (previously Rs2,550) as we take into account higher pet coke prices. We rate SRCM as one of our preferred picks in the cement sector as we believe that current valuations are much below the replacement cost. Our SOTP based valuation includes (1) Rs2,066/share for cement business based on 5.5X FY2012E EBITDA and (2) Rs334/share for external power sales based on March 2012 based DCF to equity. We note that CMP implies an EV/EBITDA of 4.6X on FY2012E cement EBITDA. Our valuations do not include the proposed 300 MW capacity, which could further add ~Rs170/share to our target price.

Economics of pet coke versus other alternatives

SRCM chose pet coke as a primary source of fuel as the surplus domestic production of pet coke gave SRCM access to a high quality fuel with sufficient availability at competitive prices. However, the worsening domestic demand-supply scenario has led to a steady increase in the prices of pet coke over the years, leading to an increased dependence on imports.

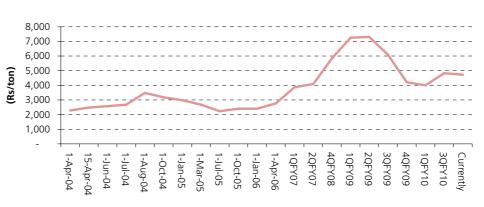

Pet coke is a bye-product of oil refining and can be used as an alternate to coal. The GCV of pet coke is on an average ~7,000 kcal/kg compared to the average GCV of average South African coal at 6,000 kcal/kg. We note that pet coke prices in India have been steadily rising and are currently at ~Rs4,700/ton. SRCM imported ~50% of its pet coke requirement in FY2010. Exhibit 4 highlights the increased dependence on imported pet coke during FY2010.

2QFY11E earnings - expect a significantly weak quarter

We estimate SRCM's revenues and PAT to decline by 18.2% and 71% sequentially, primarily on account of (1) the decline in cement prices in North by ~Rs10/bag during the quarter, (2) higher input cost on account of increasing pet coke prices and (3) sequential decline in power revenues due to weakness in short-term rates of power.

Economy

Inflation

September WPI inflation: Primary articles inflation accelerates. WPI inflation for September came in at 8.62%, marginally higher than consensus expectations of 8.5%. The pressure came from primary articles where the index jumped by 1.53% over the month. The July number on the old base was revised to 10.31% from the prior release of 9.97%.

Primary articles inflation shows no signs of abating

Primary articles inflation accelerated to 17.5% from 15.8% on the back of higher food and nonfood article prices. Primary food inflation has belied all expectations of easing and has continued to remain stubbornly high. The food index rose by 1.6% m/m, with the y/y rate rising to 15.7% from 14.6% last month. The stickiness in the food index, however, is stemming from 'milk', 'eggs, meat and fish' category. In recent years, India is likely to have witnessed a shift in consumption towards protein sources from cereals as income levels move up. As a result, demand for these food items is likely to have outstripped their supply, resulting in unrelenting price pressures. On the other hand, prices of cereals have moved lower, possibly reflecting the expectations of a bumper Kharif output. Going forward, food prices may not moderate as significantly as is being anticipated as global food prices have been firming up. On the non-food primary articles side, fibers, particularly cotton and raw silk, are witnessing acute price pressures, with prices of fibers jumping by 9.8% m/m taking the annual inflation rate to 27.6%.

Non-food manufacturing inflation sticky; fuel prices moderate

Non-food manufacturing inflation, which is indicative of demand side pressures in the economy, was unchanged from last month at 5% y/y. Although inflation in non-food manufacturing has come down from its peak of 5.9% in April, prices may not correct significantly from these levels as global liquidity continue to push up commodity prices. In September, all the sub-indices of the manufactured products (excluding food) increased marginally, with the exception of 'leather & leather products' and 'non-metallic mineral products'.

RBI to continue to tighten, likely to stay hawkish on inflation in November 2 meeting

IIP growth fell sharply in August to 5.6% from 15.2% in the previous month. However, this is mainly a result of sharp volatility in capital goods production. However, in the last monetary policy communiqué, RBI had indicated that inflation dynamics are likely to determine future policy trends. With Headline WPI inflation at 8.62%, the real policy interest rate still remains negative and needs to correct if the economy has to soft land.

We do not think that the RBI will be able to relax before inflation is firmly in a lower zone. For October, inflation could continue to stay sticky in the region of 8.3-8.5% and start to moderate significantly from around November owing to favorable base effects. Going forward, upside risks to inflation could come from rise in the global metals and other input prices on account of additional liquidity that could be pumped into the system via unconventional measures in the US. For December, we now expect Headline WPI inflation to be at around 7.0-7.25%, lower than our earlier estimate of 7.8%. This is made possible by the sudden sharp appreciation of the rupee, likely to provide a benefit on the manufactured goods side. Further, food grains and fruits and vegetables inflation has shown the sharpest decline in the last few months.

End-FY2011E inflation is expected to fall to a range of 6.0-6.5%, down from our earlier estimate of 7.0%. Overall, a combination of demand side and cost push factors continues to exert pressures on headline WPI while asset prices have once again started to move higher. We expect RBI to stay hawkish on inflation and increase policy interest rates by 25 bps at both the upper and lower ends of the interest rate corridor on November 2, 2010.

Energy

India

Gasoline-powered deregulation. We expect the ₹0.70-0.72/liter gasoline price hike by BPCL and IOCL to provide further credibility to the deregulation process. The second price hike after the June 25 deregulation announcement should allay investor concerns about the ability of OMCs to increase retail prices at high crude oil prices. We expect the subsidy-sharing to be finalized by end-FY2011E and would ignore media speculation in the interim period. We maintain our positive view on the downstream companies. We upgrade BPCL to BUY, maintain BUY on HPCL and ADD on IOCL.

Deregulation is here to stay

We expect the ₹0.70-72/liter gasoline price hike by BPCL and IOCL to further enhance investor confidence in the deregulation process. The recent price increase will likely allay investor concerns about the credibility of the deregulation process at high crude prices. We note that gasoline prices have been increased by ₹4.5/liter since the announcement of deregulation on June 25, 2010. We note that the under-recovery on gasoline (pre-increase) is ₹2.1/liter at current level of crude prices (US\$83.5/bbl Dated Brent for the week ended October 15, 2010). We have assumed that gasoline prices will be market-linked from 3QFY11E in our earnings model.

Don't be swayed by speculation on subsidy-sharing mechanism

We caution investors against media speculation on the potential subsidy-sharing mechanisms for FY2011E. We would not be surprised if the government does not provide any compensation to the downstream companies in 2QFY11E and would not extrapolate the amount, if any, to assess compensation for FY2011E. We believe that it is too early for the government to finalize the subsidy-sharing for FY2011E given the sharp volatility in several key variables—(1) crude oil prices, (2) global product prices and (3) exchange rates. We also note the government's plans to divest stakes in IOCL and ONGC by March 2011 and expect the government to create the right investment environment before their divestment. We work on the philosophy that the government would provide sufficient compensation to the downstream companies to ensure that their FY2011E and FY2012E net under-recoveries are similar to FY2010 levels (₹56 bn).

Recent correction in stock prices provides opportunity to buy

We would recommend that investors take advantage of the recent correction in stock prices of downstream companies driven by (1) sharp increase in crude oil prices and (2) media speculation about an unfavorable subsidy-sharing arrangement. We view the announcement of a hike in gasoline prices as positive for the sector as it will (1) reduce the under-recoveries in the system and (2) show that the policy-makers and downstream companies are serious about deregulation of auto fuel prices. We upgrade BPCL to BUY and see significant potential upside to our 12-month fair valuation for the three stocks—₹855 for BPCL, ₹625 for HPCL and ₹480 for IOCL. Finally, our blue-sky scenario of full deregulation (government compensates entire subsidy loss on cooking fuels) shows 39-72% potential upside from current levels.

Diesel deregulation in practice will likely follow soon

Diesel prices have been left unchanged but we expect the same to be deregulated in 4QFY11E on a likely easing of inflationary concerns. We compute under-recovery of ₹1.5/liter on diesel at crude oil price of US\$83.5 in the week ended October 15, 2010. We believe diesel deregulation is critical to address the subsidy issue given that it is the largest product by volumes (60% of total sales of regulated products). We see the pragmatic approach towards deregulation of gasoline providing greater confidence in timely implementation of diesel deregulation.
