## BHEL: Audited results reveal higher revenues and lower excise duty than preliminary numbers

- Audited results reveal higher revenues and lower excise duty than in flash numbers
- May underperform peers on the positive delta; just as it was a bulwark against crisis of confidence
- Reiterate REDUCE based on valuation, competition, execution risk and potential underperformance as economic outlook improves

BHEL's FY2009 audited numbers beat our expectations, which were based on preliminary numbers. Audited numbers indicate (a) an upward revision in gross sales and (b) sharply lower excise duty leading to higher net revenues. We have revised our P/E-multiple-based target price to Rs1,900 from Rs1,475 based on (a) roll over to FY2011E and (b) revision in target P/E multiple to 18X from 15X earlier. We reiterate our REDUCE rating on the stock based on (a) likely underperformance versus peers in an improving economic environment, (b) emerging domestic competition, (c) execution risk based on constrained capacity, (d) sharp margin expansion from employee costs and raw material are already priced in, (e) sedate growth in the medium term- 95 GW in the XIIth plan over 80 GW in the XIth plan-unless exports and industry ramp up, (f) ordering activity appears to have seen its best FY2009E, unlikely to better this for several years and (g) High valuations - P/E of 22.5 X and 19.5 X based on FY2010E and FY2011E, respectively.

## Results surpass flash numbers with higher revenues and lower excise duty

BHEL reported FY2008 revenues of Rs262 bn (up 35\% yoy), EBITDA of Rs38 bn (up 13\% yoy and PAT of Rs31.4 bn (up 10\% yoy). Based on earlier announced flash results, we expected revenues of Rs249 bn, EBITDA of Rs35 bn and PAT of Rs30.4 bn (Exhibit 1). The EBITDA margin of $14.5 \%$ in FY2009 is higher than our estimate of $14.1 \%$ even though it reflects a yoy decline of 290 bps. Several enhanced numbers explain the gap between our expectations and audited results (a) gross sales totalled Rs281 bn versus Rs 275 bn in the flash results and (b) excise duty was sharply lower, leading to higher net revenues (excise duty came in at $6.6 \%$ of gross revenues versus $9.9 \%$ of gross revenues in FY2008). We did not expect the recent excise duty cut by the government-part of the stimulus package for the economy-to have such a significant impact.

For 4QFY09, BHEL has reported revenues of Rs105 bn (up 46\% yoy), EBITDA of Rs17 bn (up $24 \%$ yoy and PAT of Rs 13.5 bn (up $21 \%$ yoy). Based on flash results, we had expected revenues of Rs92 bn, EBITDA of Rs 14 bn and PAT of Rs 12.5 bn (Exhibit 1). The EBITDA margin of $16.1 \%$ in FY2009 is higher than our estimate of $15.2 \%$, based on the provisional results, even though it still reflects a yoy decline of 280 bps .

## BHEL could benefit less than peers from positive macro developments

We believe that economic and political stability may present more upside for peers versus BHEL. BHEL works in the public-sector-dominated power sector and was a strong defensive against crisis of confidence in private enterprise and tough financing environment. However, we believe the power sector has already seen strong activity (with completion of award process of 80 GW of XIth plan and award of about 25 GW of XIIth plan orders as well equivalent to more than $40 \%$ of the total XIIth plan capacity). Thus, the positive impact of relatively more stable economic and political environment in terms of delta from this point onwards may be limited for public-sector-dominated company such as BHEL.

## Bulk tendering of power equipment would catalyze competition for BHEL

Bulk tendering for supercritical power equipment would certainly catalyze competition for BHEL. The new government appears keen on more players in power equipment manufacturing. This idea was conceived in the previous term of the government to remove one of the long-standing constraints on the pace of generation capacity addition. BHEL would be given preference over other bidders and would have reservation over a minimum portion of the order, it would still be required to match the L-1 (lowest) bid in case its bid does not turn out to be L1. The players that may qualify for bidding apart from BHEL include L\&T in a joint venture with MHI, JSW in a venture with Toshiba, Bharat Forge with Alstom and Ansaldo with GB Engineering. Additional concerns may arise from (a) increase in number of private players allowed to qualify and (b) aggressive bids leading to eventual profitability concerns. We believe that L\&T has a better-than-average chance of winning the bulk tendering order from NTPC and DVC based on (a) the lead L\&T-MHI has in terms of setting up capacity and learning curve (already executing Krishnapatnam tender) and (b) government would also not like such large tenders of national importance to be awarded to companies with relatively thin track records in execution. The award process for these projects has been facing delays considering related to (a) confusion around criterion to be used for qualification of players, (b) tying up inputs and clearances for a large number of plants simultaneously. We highlight that the recent order of four 700 MW boilers to L\&T from Nuclear Power Corporation (NPCIL) highlights that domestic competition has arrived for BHEL.

## Sedate growth in the medium term unless exports and industry ramp-up

We highlight that the company expects about 95 GW of execution in the XIIth plan (Exhibit 1) versus about 80 GW in the XIth plan. We highlight that this implies sedate yoy growth of below $5 \%$ in the domestic power segment over the medium term unless exports and the industry segment ramps up significantly. Near-term growth (i.e. over next three years), however, would be strong, led by a ramp-up of the pace of execution to meet XIth plan targets. We highlight that both exports as well as industry are relatively smaller segments as (a) BHEL achieved physical exports order worth Rs32.7 bn (about 5.5\% of total order booking in the year) and (b) BHEL achieved industry segment order inflows of Rs 102.5 bn (about 17\% of total order inflows for the year. A substantial ramp up in exports may also be limited by technology alliances which may limit export opportunity to relatively smaller countries.

We highlight that based on plant-wise order tracking we believe that a total coal-based capacity of 25.8 GW for Xllth plan has already been ordered versus likely total coal-based capacity of about 58 GW . Thus only about 31 GW or so of coal-based thermal power capacity may need to be ordered incrementally.

## Order inflows of Rs500 bn each year possible but no new peaks in the next few years

We believe that FY2009E may have seen the peak of ordering activity for next several years unless exports ramp-up significantly. We highlight that in spite of substantial progress made in XIlth plan ordering activity, we believe that BHEL's guidance of Rs500 bn of ordering over next 2-3 years may be achievable based on the following sector-wise contributions:
a) Balance order for coal-based capacity. Assuming (a) high 70\% market share from balance 31 GW of ordering remaining for XIIth plan, (b) rate of about Rs $27 \mathrm{mn} / \mathrm{MW}$ and (c) likely to be split over three years, we believe that BHEL would have annual order booking of Rs 195 bn.
b) Spares business. We estimate spares orders worth Rs31 bn in FY2010E, ramping to about Rs42 bn in FY2012E
c) Exports. Export orders may be worth about Rs50 bn each year (versus about Rs32.7 bn in FY2009E
d) Industry segment. Industry orders of about Rs120 bn versus 102 bn in FY2009E (assuming 15\% growth)
e) Other segments of capacity addition. Order booking from gas-based, hydro and nuclear power plants - About Rs65 bn of order booking each year for next three years. These estimates are based on (a) contribution from gas-based - 60\% market share in a gas-based capacity of 8.7 GW at a rate of Rs $15 \mathrm{mn} / \mathrm{MW}$, (b) contribution from hydrobased - 60\% market share in hydro power capacity of 22 GW at a rate of Rs $10 \mathrm{mn} / \mathrm{MW}$ (40\% may already have been ordered) and (c) contribution from nuclear-based - 70\% market share in nuclear power capacity of 7.2 GW at a rate of Rs10 mn/MW (30\% may already have been ordered).

## Key risks: Execution delays-expanded capacities would come into play by FY2010E-end only

We believe BHEL may face execution-related challenges due to capacity constraints in FY2010E based on the slow pace of capacity addition. BHEL would commission expanded capacities in December 2009 and thus its effective capacity in FY2010E remains at about 10 GW. This is borne out by almost flat yoy depreciation figures - BHEL has had an increase of only Rs0.2 bn in quarterly depreciation between 3QFY09 and 3QFY07, implying an increase of only Rs0.8 bn in annual depreciation. Considering BHEL has resources at its hand and has commitments to deliver to its customers (and Indian power sector in a larger picture) we would have liked faster pace of capacity addition by BHEL.

BHEL has signed a relatively sedate MOU target revenue of Rs320 bn (gross revenues under stretch target), equivalent to about Rs295 bn of net revenues in FY2010E. This implies a growth of $18.3 \%$ in net revenues (including adjustment for lower excise duty in FY2010E versus FY2009E from government stimulus program). We highlight that BHEL achieved gross revenues of Rs281 bn close to its FY2009E stretch target of Rs270 bn.

## We reiterate our REDUCE rating based on valuation, competition, execution risk and potential for underperformance as economic outlook improves

We have changed our earnings estimates for FY2010E and FY2011E to Rs92 (from Rs88.3) and Rs107 (from Rs104.5) respectively based on slightly higher execution expectations versus earlier expectations (Exhibit 8). We have revised our P/E multiple based target price to Rs1,900 from Rs1,475 earlier based on (a) roll over to FY2011E earnings estimates and (b) increase in target P/E multiple to 18 X from 15X earlier in line with expansion in market multiples.

## We reiterate our REDUCE rating on the stock based on:

a) High valuations. BHEL trades at high P/E valuations of 22.5 X and 19.5 X based on FY2010E and FY2011E, respectively, and at EV/EBITDA of 15X and 12.5X FY2010E and FY2011E, respectively. Such high valuation limit upside from current levels.
b) Emerging domestic competition. We believe that apart from imports-based competition, domestic competition is ramping-up for BHEL and will pressure margins and market share in the medium term.
c) Execution risk based on constrained capacity. While BHEL has a very strong backlog, the focus is on ability to execute that backlog. BHEL faces risk of missing on execution expectations based on slow pace of capacity addition.
d) Potential for underperformance as economic outlook improves. We highlight that BHEL has outperformed quite significantly in the recent past in a crisis environment because of its public sector ecosystem. However as the economic outlook improves, BHEL may underperform versus peers for whom the improvement in environment imply uptick in business fundamentals itself. Thus BHEL may lag in terms of stock performance.
e) Margin expansion from employee expenses and raw material are priced in. We highlight that our estimates build in a very sharp margin expansion of about 450 bps in FY2010E over FY2009 on account of lower employee-wage-provision-related expenses as well as benefit of lower commodity prices. Negative surprise on this relatively aggressive base case could originate from delay in realization of benefit from lower commodity prices.

## Cairn India: All set for 'first oil'

- Steady progress on Rajasthan development; train one ready for commencement of
production
- Weak 5QFY09 results due to (1) lower realizations and (2) lower production volumes
- Maintain BUY with 12-month DCF-based target price of Rs225

Cairn India reported 5QFY09 consolidated net revenues at Rs1.8bn (-14\% qoq and $43 \%$ yoy) and EBITDA at Rs794 mn ( $-16 \%$ qoq and $-64 \%$ yoy) versus our estimate of Rs835 mn. The qoq decline in EBITDA was due to (1) significantly lower crude price realization at US\$47/bbl (US\$56.4/bbl in 4QFY09), (2) lower production at 15,811 boe/d ($5 \% \mathrm{qoq}$ ) and (3) higher exploration costs at Rs627 mn (+67\% qoq). We note that the current results are not material and we would focus more on issues pertaining to production of crude from Cairn's Rajasthan block where the bulk of Cairn's valuation resides. The development in Rajasthan is on track with the first train ( $30,000 \mathrm{~b} / \mathrm{d}$ ) complete and ready to start production. We have changed our earnings model to reflect change in the financial year end to March 31 from December 31. Our earnings estimates for FY201012 E are Rs9.2, Rs31.2 and Rs35.6. We retain our BUY rating with a 12-month DCF-based target price of Rs225. Key downside potential stems from lower-than-expected crude price.

## Update on pertinent issues

Commencement of production. The management maintained that it is on track for commencement of production with the completion of first train with a production capacity of 30,000 b/d with the initial dispatch of oil by trucks. The subsequent second, third and fourth trains with capacities of $50,000 \mathrm{~b} / \mathrm{d}, 50,000 \mathrm{~b} / \mathrm{d}$ and $75,000 \mathrm{~b} / \mathrm{d}$ will start in 4QCY09, 1 HCY10 and CY2011 with crude transportation by pipeline. The company is drilling 18 wells out of which 4 are ready for commencement of production. However, the management did not give details about the actual start of production from the field in view of the pending issues (uptake and pricing).

Pricing of crude. The management maintained that the pricing negotiations are expected to be concluded soon. The management had previously indicated that the crude from Rajasthan block will be benchmarked to Bonny Light and the pricing is expected to be at $10-15 \%$ discount to Dated Brent. This is in line with our current assumption of US\$8/bbl discount to dated Brent.

Uptake of crude. MRPL, HPCL and IOCL have been nominated for uptake of initial quantity of crude from Cairn's Rajasthan block. The management did not share details of the quantity agreed to be taken by the government-appointed nominees; however, it reiterated that there is no risk related to uptake of initial quantity of crude. The management highlighted that it is negotiating for uptake of additional volumes from existing nominees; the government is also evaluating the option of appointing other nominees for uptake of crude.

Cess. The management maintained that there had been no further development on the cess issue. We currently assume that Cairn will not bear any cess on the portion of crude oil $(70 \%)$ produced by it from the Rajasthan block. Our 12-month fair value of the stock comes to Rs209 if we assume that Cairn will have to bear cess at Rs927/ton and it drops to Rs189 if we assume cess at Rs2,575/ton (Exhibit 3)

As per media reports, the petroleum secretary has stated that Cairn India is liable to pay cess on its share of crude oil production from the RJ-ON-90/1 oilfield, reiterating the government's stance that all the contractors are bound to pay cess in the ratio of their participating interests as per the Oil Industry Development Act, 1974. This stance of the ministry has also been vetted by the ministry of law and justice.

Development of Kameshwari discoveries. The management stated that it is in the process of finalizing the FDP for the discoveries and will be submitting it to its consortium partner, ONGC, for its approval within a month. We note that the DGH had already given the 'declaration of commerciality' to Cairn's three Kameshwari (2,3 and 6) discoveries in January 2009. These discoveries made in May 2007 in the Northern Appraisal Area along with another oil and gas discovery near Raageshwari field in December 2008 in the southern part of the current development area highlight the upside potential to reserves in Cairn's prolific RJ-ON-90/1 block.

Resource potential in Barmer hill formation. The management maintained its estimate of potential oil in place of $\sim 400 \mathrm{mn}$ bbls the Barmer hill formation. The management also stated that analogous fields have been developed with an ultimate recovery of 7-20\% under primary and secondary recovery schemes. We have been highlighting scope for inclusion of resources in Barmer Hill in reserves once Cairn is in a position to extract crude oil from this zone.

## Details of 5QFY09 results

In-line EBITDA; decline in revenues qoq due to lower production and crude
realization. Cairn India reported consolidated net revenues for the quarter ended March 31,2009 at Rs 1.8 bn ( $-14 \%$ qoq and $-43 \%$ yoy) and EBITDA at Rs 794 mn ( $-16 \%$ qoq and $-64 \%$ yoy). The qoq decline in EBITDA reflects (1) lower crude price realization at US\$47/ bbl (US\$56.4/bbl in 4QFY09), (2) lower production at 15,811 boe/d (-5\% qoq) and (3) higher exploration costs at Rs627 mn (+67\% qoq).

Cairn's 5QFY09 production was at 15,811 boe/d (working interest-basis) versus 16,591 boe/d in 4QFY09. At CB-OS-2, gas production declined $10 \%$ qoq and oil production increased $3 \%$ qoq. Gas production has declined significantly due to the declining phase of the fields past plateau production. At Ravva, oil production declined by $1 \%$ qoq and gas production declined by $13 \%$ qoq.

The exploration expenses were higher at Rs627 mn (+67\% qoq) due to drilling of two wells in the quarter-(1) one well in GV-ONN-2002/1, which turned out to be dry and (2) one well in RJ-ONN-2003/1.

Jindal Steel and Power: Steel business reports weak earnings; power continues to deliver. Downgrade to ADD with target of Rs1,820

- 4QFY09 steel business margins fall sharply due to possible inventory write-downs
- Power business continues to deliver with PAT of Rs6.51 bn (up $13 \%$ qoq)
- Maintain earnings forecasts, raise target to Rs1,820. Downgrade to ADD from BUY

4QFY09 standalone net profit at Rs3.6 bn—ahead of our estimate of Rs2.4 bn mainly on account of higher other income due to reversal of foreign exchange losses, lower interest costs and tax rates. 4QFY09 steel business results were negatively impacted by a possible write-down of inventory valuation for raw materials, which was offset by increased contribution from the power business. The merchant power business reported net earnings of Rs6.51 bn, which was higher by $13 \%$ qoq. Average power tariff realizations were at Rs6.5 per unit and are stable. We have marginally revised our earnings estimates for the steel business while we maintain our estimates for the power business. We raise our TP to Rs1,820/share on account of higher multiple for the steel business. We lower our rating to ADD from BUY earlier as we see limited catalysts for near-term upsides. The second phase of power expansion of 2400 MW is underway but would take 2-3 years to deliver and incremental valuation upside would only be gradual.

## 4QFY09 net profit ahead of expectations due to non-operation factors

JSP reported 4QFY09 net profit at Rs3.6 bn, ahead of our expectation of Rs 2.4 bn. Net earnings were ahead of our expectations mainly on account of significantly higher other income which may have been due to possible write-back of foreign exchange losses, lower interest cost and lower tax rates. On a segmental basis, the steel business reported lowest ever PBIT in recent years of Rs0.26 bn (down 96\% yoy and 95\% qoq). The sharp drop in profitability could be on account of a write down of raw material inventory of coking coal. We would have more details post the management conference call today.

Sharply lower results from the steel business were compensated by a sharp increase in profitability in the power segment, which reported a PBIT of Rs2.4 bn (up 111\% yoy and 89\% qoq). Power segment PBIT margins also improved to 83.3\% (66.7\% yoy and 61.8\% qoq).

## Power business contributes strongly to FY2009 earnings

FY2009 net profit at 15.3 bn was up 24\% yoy mainly on account of (1) increase in steel sales and (2) improved realizations on a yoy basis. We note that increased contribution from the power business also led to increase in earnings. Power segment EBIT grew 65\% yoy while steel EBIT grew 12\% yoy.

## Annual steel business results

4QFY09 steel revenue at Rs17.8 bn grew 17\% yoy on account of increase in sales volumes. However, EBIT margin dropped sharply to $1.4 \%$ for the quarter mainly on account of (1) a large 15\% drop in average realizations and (2) large inventory write downs.

## Power business result—Average realizations stable at $\sim$ Rs6.5/unit

JSP's wholly owned subsidiary Jindal Power (JPL) reported 4QFY09 net sales at Rs11.5 bn (Rs11.6 bn in 3QFY09) and PAT at Rs6.51 bn (13\% qoq growth over Rs5. 75 bn in 3QFY09). We estimate the power plant to have sold about 1.76 bn units during 4QFY09 ( 1.75 bn units in 3QFY09) realizing an average tariff of Rs6.5/unit. We expect merchant tariffs to soften over the next few quarters with increased generation from gas-based power plants and state utilities reducing the purchase of high-cost power after the elections.

## Marginal revision in earnings

We have marginally revised our estimates for the steel business. We estimate consolidated EPS at Rs172.4 and Rs196.2 for FY2010E and FY2011E respectively (versus our earlier estimate of Rs171.6 and Rs195.4). Our earnings estimates for the power business remains unchanged.

Increased steel business valuation on higher target multiple We have increased our target EV/EBITDA multiple to 6X from 5X previously to factor in bottom-cycle earnings. Besides, we have rolled over our valuation to FY2011 basis. We now value the steel business of JSP at Rs812/share (versus our earlier estimate of Rs394/share). The increase in our valuation of the steel business is mainly due to the increase in target multiple and roll-over to FY2011E earnings.

## Power business valued at Rs1,009/share

We value the power business using DCF-equity at Rs $1,009 /$ share. Our valuation includes Rs775/share for the operational 1,000 MW power plant and Rs234/share as the value enhancement likely from the 2,400 MW power project being developed. We assume average merchant tariff of Rs5/unit for sale of 800 MW till FY2013E and reduce it to sustainable tariff of Rs3/unit after FY2013. We assume JPL will continue to sell 200 MW to CSEB and industrial estate at Rs2.80/unit. Our valuation of the power business (including the $2,400 \mathrm{MW}$ project under development) implies a P/E of 9.8 X on FY2010E. We note the reported earnings of JPL are depressed in the near-term due to high depreciation rate ( $\sim 14 \%$ ) being charged by the company. We will fine-tune our estimates for the power business after management shares the exact cost structure of the operating power plant.

Raise target price to Rs1,820. Lower rating to ADD from BUY earlier We raise our target price to Rs1,820 from Rs1,400 earlier factoring in higher valuation multiples for the steel business. We value the power business at Rs1,009 based on DCF-equit method which has remained unchanged. We lower our rating to ADD from BUY earlier as we believe there are few positive catalyst which could for near-term upsides. The second phase of power expansion of 2400 MW is underway but would take 2-3 years to deliver and incremental valuation upside would only be gradual.

Federal Bank: Reports steady performance, retain BUY rating

- 4QFY09 PAT impacted by sharp decline in loan-deposit ratio and higher effective tax rate
- Uncertainty on plans to acquire Catholic Syrian Bank and low near-term RoE could impact near-term stock performance
- Retain BUY rating with a target price of Rs280

Federal Bank's profitability in 4QFY09 was impacted by two factors (1) higher deposit growth compared to loans and (2) higher effective tax rate on account of certain adverse court rulings on past IT cases. We believe that the NIM of the company should likely improve during the course of the year as the loan demand improves and high cost liabilities reprice at lower interest rates. We have revised our estimates downwards post the results-8\% in FY2010E and 3\% in FY2011E. The stock has appreciated 101\% over the past three months on the back of the improved risk appetite and the reasonably strong financial performance of the company. It currently trades at 0.9XPBR FY2010E. We highlight two concerns that could impact the near-term stock performance: (1) near-term RoE of the company could be around 12-13\% given the equity raising of Rs21.4 bn ( $49 \%$ of FY2010E net worth) made in 4QFY08, (2) uncertainty regarding the company's plans to acquire Catholic Syrian Bank. We retain our BUY rating and FY2010E -based target price of Rs280.

Net interest income growth was lower than expected. NII of Federal Bank in 4QFY09 was Rs3.2 bn-a growth of $16 \%$ yoy and $10 \%$ lower than estimates. The lower-thanexpected growth in NII was on account of the incremental loan growth (of Rs8 bn) being much lower than the incremental deposit growth (of Rs49 bn) in 4QFY09. Consequently, the loan-deposit ratio of the company has come off to $69.5 \%$ as of March 2009 from 79\% in December 2008.

The management indicated that this slower growth in loans was a conscious strategy given the uncertain macro environment. The lower loan-deposit ratio provides the company with leeway to fund its loan growth by reducing its investment portfolio and might be positive for NIM in the event of a pick-up in loan demand. The company has undertaken measures to reduce its funding costs by lowering deposit rates across maturities and hopes to maintain a NIM of 4\% in FY2010E compared to the 4.28\% reported in FY2009.

Asset quality remains healthy. The gross NPL ratio of the company stood at $2.6 \%$ with a provision coverage ratio of $88 \%$ at the end of FY2009, which is healthy and provides significant cushion in the event of an economic downturn. Federal Bank's reported gross NPLs as of March 2009 were Rs5.9 bn down from the Rs6.3 bn as of December 2008. Similarly, the reported net NPLs also declined to Rs681 mn as of March 2009 from Rs706 mn in December 2008.

Federal Bank has restructured Rs6.3 bn of loans (as of March 2009) and these accounted for $2.8 \%$ of its net loans. Out of the Rs6.3 bn of loan assets restructured, Rs380 mn were sub-standard assets. The company has Rs3.5 bn of loan assets (as of March 2009) that are being considered for restructuring. The management hopes to maintain gross NPL ratio in the range of $2-3 \%$ as of March 2010E. We factor a gross NPL ratio of $4.5 \%$ for March 2010E in our estimates assuming a slippage ratio of 3.8\%.

Adverse court rulings on past IT disputes led to higher effective tax rate. The effective tax rate of Federal Bank was a high 51\% in 4QFY09 and 36.9\% for FY2009another reason for the lower-than-expected PAT. The company has been paying a lower tax rate of $22-28 \%$ over the past five years benefiting from the exemptions under section 36 (1) (viii) of IT Act and having an aggressive NPL write-off policy. The reason for this higher tax rate was the adverse court rulings on two past income tax disputes.
Consequently, the company had to make the additional tax payments in the current quarter and led to a higher effective tax rate in the quarter.

Uncertainty on merger with Catholic Syrian Bank. Newspaper reports suggest that Federal Bank is looking to acquire Catholic Syrian Bank-the Kerala-based bank with 363 branches and a deposit base of around Rs53 bn (FY2008) (about 20\% of Federal Bank deposits) and PAT of Rs367 mn (FY2008) (10\% of Federal Bank's PAT). Financial details on the proposed deal are not yet known and the implementation of the merger plan may be a challenge for Federal Bank given the different systems/processes of Catholic Syrian Bank.

## Jaiprakash Associates: Securitization of receivables improves funding ability for power business

- JPVL has securitized future receivables resulting in net cash inflow of Rs7 bn
- Execution of projects across business segments continues to remain strong
- Retain ADD rating with revised target price of Rs190/share

Jaiprakash Power Ventures (JPVL), 81\% subsidiary of Jaiprakash Associates (JPA) has securitized future receivables resulting in a net cash inflow of Rs7 bn that increases the funding abilities for future projects. JPA continues to explore value-accretive opportunities and has received Lol for two power projects (3,300 MW) to be developed in Uttar Pradesh. We retain our ADD rating on the stock with a revised target price of Rs190/share (Rs140 previously). Our revised target price incorporates the benefit of rolling-over the valuations to FY2011E. We expect strong growth in construction and cement business to drive earnings during FY2009-11E. We estimate EPS of Rs7.8 for FY2010E and Rs11.7 for FY2011E. Upside to our earnings and valuations could arise across business segments-(1) higher-than-projected volumes growth in cement with installed capacity currently at 13.5 $m n t p a$, (2) faster execution in construction and (3) faster launches in real estate.

## Securitization of receivables for Vishnuprayag likely to help augment cash flow for future projects <br> JPA has securitized the future receivables of the Vishnuprayag project recently which has resulted in (1) increased equity-funding capabilities of the company and (2) reduced the debt repayment obligations in the near-term. JPVL (holding company for Vishnuprayag project) realized net Rs7 bn after refinancing the existing debt. The debt is now rescheduled for payment over a 14-year period. <br> JPVL reported revenues of Rs3.7 bn, operating profit of Rs3.3 bn and net income of Rs1.8 bn for FY2009. Profits for the year were boosted by income from sale of VERs for Rs567 mn . However, loss on foreign exchange to the tune of Rs288 mn and higher operating and maintenance expenses resulted in a marginal yoy decline in net profits.

## Power-thermal projects achieve key milestones, Karcham Wangtoo ahead of schedule

Our DCF-equity valuation of JPA's power project portfolio at Rs76/share (Rs66/share previously) implies a P/B of 1.8 X and is net of the equity investment still to be made in the projects. Our valuation includes projects which are (1) currently under operation (700 MW), (2) have achieved critical milestones and progress in development/construction (4,845 MW). As per management, the construction work on Karcham-Wangtoo project is running ahead of schedule and the project is likely to commission six months ahead of schedule (in FY2012). JPA has also made significant progress in thermal power projects--(1) Jaypee Nigries (1,320 MW pithead-based power project), has achieved financial closure and (2) equipment order has been placed for Bina ( 500 MW ). Both these projects plan to sell about 50\% power on merchant basis. JPA has also received Lols for developing 2X660 MW Karchana and 3X660 MW Bara thermal power projects in Uttar Pradesh.

## Cement-capacity addition in sync with long-term plan, upside risk to volume estimates

We use a 6X EV/EBITDA multiple on FY2011E to value JPA's cement business at Rs75/share (Rs52/share previously based on 5X EV/EBITDA). We have increased the multiple to be in line with the current peer valuations. Large cap cement stocks are currently trading at 6.8 X EBITDA while our target prices for large cap cement companies imply an average 6.3X EBITDA on FY2011E. Our valuation of the cement business implies EV/ton of US $\$ 143$ on FY2011E production and US\$95 on FY2011E capacity.

We note there could be upside to our cement valuation as we have assumed a significantly slower volumes growth compared to management guidance. We factor in volumes of 10 mn tons ( $+31 \%$ yoy) in FY2010E and 12.8 mn tons ( $+28 \%$ yoy) in FY2011E compared to management's guidance of 13 mn tons of cement in FY2010. During FY2009, JPA commissioned cement capacities at Dalla ( 2.5 mn tpa ) and Sidhi ( 2 mn tpa ) taking the overall installed capacity to 13.5 mn tpa.

## Construction-benefiting from project execution across business segments

We value the construction business at 6X FY2011E EBITDA (5X EBITDA previously) in line with the current valuation of construction stocks under coverage (IVRCL, Nagarjuna Construction trading at 6-7X EBITDA on FY2011E). We expect JPA's construction division to report strong revenue growth over the next two years as the execution of Yamuna Expressway and Karcham-Wangtoo gain momentum. We expect the construction division to also undertake the civil works at the thermal power plants -project—Bina ( 500 MW ) where the BTG order has been placed to BHEL and Jaypee Nigries ( $1,320 \mathrm{MW}$ ) where financial closure has been achieved and equipment orders are being finalized.

## Real estate-taking the lead in moderating prices, project launches continue for mid-income housing

We roll forward our model to FY2011E, which results in an increase in NAV to Rs55/share from Rs46/share. We also note that JPA has recently launched 'AMAN', a new township project on the Yamuna expressway over an area of 70 acres at a basic pricing of Rs2,100/ sq. ft.

Management indicated that JPA has-(1) sold 2.9 mn sq. ft in Jaypee Greens at an average price of Rs5,500/sq. ft and has customer advances of Rs9.5 bn; (2) sold 5.3 mn sq . ft in Wish Town at an average price of Rs5,100/sq. ft and has customer advances of Rs10 bn. We estimate consolidated revenues of Rs10.4 bn in FY2010E and Rs15.9 bn in FY2011E. We estimate sales volumes of 2.6 mn sq. ft in FY2010E and 2.3 mn sq . ft in FY2011E, largely coming from the Noida project.

Retain ADD rating with revised target price of Rs190/share (Rs140/share previously). Our SOTP-based target price includes: (1) cement business valued at 6X EV/EBITDA on FY2011E— Rs90 bn (Rs63 bn previously); (2) construction business valued at 6X EV/ EBITDA on FY2011E—Rs73 bn (Rs48 bn previously); (3) one-year forward NAV of the real estate business at Rs66 bn (Rs55 bn previously) and (4) DCF-equity of power projects at Rs91 bn (Rs79 bn previously). JPA also has a net debt of Rs98 bn for financing its cement, construction and roads businesses. Upside to our earnings and valuations could arise across business segments-(1) higher-than-projected volume growth in cement with installed capacity currently at 13.5 mn tpa, (2) faster execution in construction and (3) faster launches in real estate.

Other definitions
Coverage view. The coverage view represents each analyst's overall fundamental outlook on the Sector. The coverage view will consist of one of the following designations: Attractive (A), Neutral (N), Cautious (C).

Other ratings/identifiers
NR = Not Rated. The investment rating and target price, if any, have been suspended temporarily. Such suspension is in compliance with applicable regulation(s) and/or Kotak Securities policies in circumstances when Kotak Securities or its affiliates is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.
CS = Coverage Suspended. Kotak Securities has suspended coverage of this company.
NC = Not Covered. Kotak Securities does not cover this company.
RS = Rating Suspended. Kotak Securities Research has suspended the investment rating and price target, if any, for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. NA = Not Available or Not Applicable. The information is not available for display or is not applicable.
$\mathbf{N M}=$ Not Meaningful. The information is not meaningful and is therefore excluded.

Copyright 2009 Kotak Institutional Equities (Kotak Securities Limited). All rights reserved.
Kotak Securities Limited and its affiliates are a full-service, integrated investment banking, investment management, brokerage and financing group. We along with our affiliates are leading underwriter of securities and participants in virtually all securities trading markets in India. We and our affiliates have investment banking and other business relationships with a significant percentage of the companies covered by our Investment Research Department. Our research professionals provide important input into our investment banking and other business selection processes. Investors should assume that Kotak Securities Limited and/or its affiliates are seeking or will seek investment banking or other business from the company or companies that are the subject of this material and that the research professionals who were involved in preparing this material may participate in the solicitation of such business. Our research professionals are paid in part based on the profitability of Kotak Securities Limited, which include earnings from investment banking and other business. Kotak Securities Limited generally prohibits its analysts, persons reporting to analysts, and members of their households from maintaining a financial interest in the securities or derivatives of any companies that the analysts cover. Additionally, Kotak Securities Limited generally prohibits its analysts and persons reporting to analysts from serving as an officer, director, or advisory board member of any companies that the analysts cover. Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed herein, and our proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein. In reviewing these materials, you should be aware that any or all of the foregoing, among other things, may give rise to real or potential conflicts of interest. Additionally, other important information regarding our relationships with the company or companies that are the subject of this material is provided herein.

This material should not be construed as an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. We are not soliciting any action based on this material. It is for the general information of clients of Kotak Securities Limited. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Before acting on any advice or recommendation in this material, clients should consider whether it is suitable for their particular circumstances and, if necessary, seek professional advice. The price and value of the investments referred to in this material and the income from them may go down as well as up, and investors may realize losses on any investments. Past performance is not a guide for future performance, future returns are not guaranteed and a loss of original capital may occur. Kotak Securities Limited does not provide tax advise to its clients, and all investors are strongly advised to consult with their tax advisers regarding any potential investment.
Certain transactions -including those involving futures, options, and other derivatives as well as non-investment-grade securities - give rise to substantial risk and are not suitable for all investors. The material is based on information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied on as such. Opinions expressed are our current opinions as of the date appearing on this material only. We endeavor to update on a reasonable basis the information discussed in this material, but regulatory, compliance, or other reasons may prevent us from doing so. We and our affiliates, officers, directors, and employees, including persons involved in the preparation or issuance of this material, may from time to time have "long" or "short" positions in, act as principal in, and buy or sell the securities or derivatives thereof of companies mentioned herein. For the purpose of calculating whether Kotak Securities Limited and its affiliates holds beneficially owns or controls, including the right to vote for directors, $1 \%$ of more of the equity shares of the subject issuer of a research report, the holdings does not include accounts managed by Kotak Mahindra Mutual Fund.Kotak Securities Limited and its non US affiliates may, to the extent permissible under applicable laws, have acted on or used this research to the extent that it relates to non US issuers, prior to or immediately following its publication. Foreign currency denominated securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of or income derived from the investment. In addition, investors in securities such as ADRs, the value of which are influenced by foreign currencies affectively assume currency risk. In addition options involve risks and are not suitable for all investors. Please ensure that you have read and understood the current derivatives risk disclosure document before entering into any derivative transactions.
This report has not been prepared by Kotak Mahindra Inc. (KMInc). However KMInc has reviewed the report and, in so far as it includes current or historical information, it is believed to be reliable, although its accuracy and completeness cannot be guaranteed. Any reference to Kotak Securities Limited shall also be deemed to mean and include Kotak Mahindra Inc.
