

**ABOUT FIBONACCI LEVELS:**

Fibonacci levels are basically **Support and Resistance levels** generated using 5-day's chart (i.e) **5 day's High, Low and Close**. Hence they are more accurate than Pivot levels which are generated using Previous day's High, Low and Close.

Generally stocks look **bullish above the Previous day's High** and **bearish below Previous day's Low**. So **Previous Day's high is the minor resistance (MIR)** for the scrip and the **Previous Day's low is the minor support (MIS)** for the scrip.

Stocks look **strong above the 5-day's High** and **weak below 5-day's Low**. So **Previous 5-day's high is the major resistance (MR)** for the scrip and the **5-day's low is the major support (MS)** for the scrip.

So,

MR INDICATES MAJOR RESISTANCE- 5 DAY'S HIGH

MS INDICATES MAJOR SUPPORT- 5 DAY'S LOW

MIR INDICATES MINOR RESISTANCE- PREVIOUS DAY'S HIGH

MIS INDICATES MINOR SUPPORT- PREVIOUS DAY'S LOW

SCRIP LOOKS **BULLISH** ABOVE PREVIOUS DAY'S HIGH

SCRIP LOOKS **STRONG** ABOVE 5 DAY'S HIGH

SCRIP LOOKS **BEARISH** BELOW PREVIOUS DAY'S LOW

SCRIP LOOKS **WEAK** BELOW 5 DAY'S LOW

LTP is the Last Traded Price for the scrip

HOW TO USE IT:

For eg. For Aban OffShore October Futures **LTP** is **3480** .**MS** is **3235** which is the **major support** below which the stock is extremely weak and **MR** is **3579** which is the **major resistance** above which the stock is extremely strong.

Suppose the stock currently trades at **3510**,above **3512** long position can be built for the **first target** of **3579** and if it cuts 3579 it can go up to the **second target** of **3645** and the **stoploss** can be placed at **3473**. Since the trend is sideways it becomes **bullish** after it cuts **3505(MIR)** and becomes extremely **strong** after it cuts **3579(MR)** levels.
