## Global News

- U.S. stock futures rose, following the biggest weekly drop since October 2008 for the Dow Jones Industrial Average, on speculation European policy makers will announce steps to contain the debt crisis as foreign counterparts lobby for action.
- Wall Street leaders, urging coordinated action from world governments to solve the European sovereign-debt crisis, struggled themselves during four days of meetings in Washington to agree on what's needed to end it.

## Sector \& Corporate News

- Maruti Suzuki: Undeterred by ongoing stand-off with its workers at the Manesar plant, Maruti Suzuki India expressed confidence that production constraints will have no impact on supplies for the festive season sales. The company, which has so far received bookings of 1.08 lakh units for its new Swift.
- Tata Steel: Tata Steel is confident that the first phase of its 6 million tonnes per annum steel project at Kalinganagar, in Orissa, will be complete by December 2013.
- UBS: The recent loss of USD2.3bn at UBS due to an unauthorised trade has claimed its first major victim with the resignation of Group CEO Oswald J. Grübel.
- GVK Power and Infrastructure: GVK Power and Infrastructure, the flagship company of Hyderabad-based GVK group, is planning to have 7,500 MW thermal power generation capacity by 2016-17.
- SRF: Leading technical textiles-maker SRF aims to become a USD1 bn by 2013 on the back of robust growth in its business and investments.

## INITIATING COVERAGE

# Coal India Limited "BLACK DIAMOND" - the growth accelerator 

## Investment rationale

## Coal - the fuel for India's long-term growth story

Coal accounts for $\sim 52 \%$ of primary energy consumption and $\sim 66 \%$ of electricity generation in the country. Given a reserve of $\sim 61$ bnt, coal is the only fuel which can suffice the burgeoning demand of energy in the country as existing gas reserves of $\sim 51$ tcf can support another $\sim 10-15 \mathrm{GW}$ capacity. Moreover, other sources of energy like hydro and controversial nuclear power are expected to witness a moderate growth. Coal India Limited (CIL) with a coal reserve of $\sim 20$ bnt and resource of $\sim 60 \mathrm{bnt}$ stands to be a natural beneficiary and is expected to emerge as India's "growth accelerator". Coal India - a "utility natured commodity"
Our analysis of the business model and earnings revealed that CIL is a "Utility natured commodity". Given the huge demand-supply gap of coal (FY11 gap of $\sim 100 \mathrm{mt}$ expected to reach $\sim 170-200 \mathrm{mt}$ by FY17e), Coal India doesn't face any off-take risk. This coupled with a reasonable pricing (average sale price of $\sim$ USD30/tn vis-à-vis imported coal price of ~USD60-65 CIF for similar coal), would provide cushion to CIL for long-term robust earnings. CIL has posted 5/8 year CAGR EPS growth of $12 \% / 24 \%$ with a production growth of $\sim 4.5 \%$. This characterises the utility model of CIL.
While sales/tn has grown by $\sim 6 \%$, cost/tn has increased by only ~2.5\% (2001-2011), thus conveying pricing ability. With e-auction volumes at $\sim 12.5 \%$ of total sales, A/B grade coal largely linked ( $\sim 15 \%$ discount) to international price and non-power/fertiliser coal at higher price - the global commodity angle also comes into picture.

## Valuation and outlook

## Initiate Coal India with a BUY

CIL is estimated to post an EPS growth (CAGR) of $\sim 28 \%$ over FY1 1-13e. Our EPS for FY1 2 e and FY13e stands at INR24.6 and INR28.3, respectively. At the CMP of INR367, the stock trades at $13 \times$ FY13e. We have valued the stock on a DCF basis. Our value for the stock (CoE - 11\%, terminal growth - 4.5\%) stands at INR2,950bn - implying a target price of INR467, which provides $27 \%$ upside from current level. We initiate coverage on Coal India with a BUY rating.

## Valuation and Outlook

## FY12 - "Year of off-take"

In 1QFY1 1, CIL registered production/sales of 96.3/106.3mt. While production was mildly up (by $\sim 1 \mathrm{mt}$ ), sales grew by $\sim 5.4 \mathrm{mt}$ due to liquidation of coal stocks at the yards on a YoY basis. Inventory liquidation in $1 Q$ stood at 10 mt . At the end of the previous month, production and sales stood at $155 / 175 \mathrm{mt}$. On account of heavy rains, production target ( $\sim 165 \mathrm{mt}$ ) couldn't be met. The Exhibit below gives YoY comparison of the same.

Exhibit 181: Quarterly production and sales

## Coal India's production/offtake target for FY12e - 452/ 454mt

## Till August, CIL's production has been 10 mt below target

Offtake FY12e/13e-454/ 479mt

Production FY12e/13e-446/ 468mt

Source: Company, Antique
CIL has guided for production/off-take target of 452/454mt for FY12e. CIL has declared current year as "Year of Offtake" and expects to liquidate significant part of its inventory liquidation in FY12e. We note that the production growth remained stagnant in FY 11 and expect a muted growth in FY12e mainly on account of inability of CIL to expand its production capacity. The same has been on account of problems related to land acquisition and environmental concerns. Till August, CIL' s production has been below target by $\sim 10 \mathrm{mt}$ and 4 mt below last year same period, hence we believe there is some downside risk to the 452 mt production target of the company. We have taken 446 mt as production for the current year, but as inventory off-take has been good till date, our sales volume stands at 454 mt . We estimate sales/production for FY 13 e at $479 / 468 \mathrm{mt}$.

Exhibit 182: Yearly production and sales

## Valuation

We have valued CIL on a DCF basis. We have assumed a sales volume growth of $\sim 4.5 \%$ till FY18e (591 mt sales).

## What does the present CMP and our target factor in?

At the end of FY 13 e , we estimate CIL to have a cash of $\sim 1 N R 735$ bn, which implies a value of INR116/share.

At the CMP of INR367 with core EPS of INR21.6, CIL's core business is valued at $11.6 x$. At our target price of INR467, company's core business is valued at $16.2 x$.

## Valuing the reserves

We have further estimated terminal value at the end of FY18e by estimating the value of reserves. For FY12-18e, we have assumed the numbers similar as DCF valuation.

Reserves status:

- Extractable reserve: 21 bt
- Measured resources: 54bt
- Total resources (measured + indicated + inferred): 65bt $(54+10+1)$

Based on these three types of reserves and resources, we have considered three scenarios. In all the three cases, the following assumptions have been undertaken:

- Sales volume assumption: We estimate sales volume to grow at a rate of $4.5 \%$ (post FY18) till it reaches 1,000mtpa and thereafter $4 \%$ growth has been assumed till overall reserves end.
- Pricing assumption: We have assumed three scenarios from FY19, i.e., USD35/40/45 per tonne.

[^2]We believe following are the parameters which need to be watched as these have significant impact on earnings:

- Production and sales - Assumptions as above
- Wage hike - Assumed at $\sim 25 \%$ (ref. Annexure 6)
- OBR adjustment - Assumed till FY12 only (ref. Annexure 9)
- Mining tax - Not assumed in FY13e
- Coal price hike - Not assumed in FY13e (ref. Annexure 4)
- Tax rate - Estimated at $\sim 31 \%$ for FY12e/FY13e as ECL and BCCL would be making profit but they have accumulated loss in excess of INR145bn

## Sensitivity of FY12 earnings with respect to increase in production

Our sales estimates for FY 12 e stands at 454 mt . CIL's guidance is also on similar lines, however it intends a production of 452 mt and inventory liquidation of $\sim 20 \mathrm{mt}$ which can take up the sales volume to $\sim 472 \mathrm{mt}$. Sensitivity of earnings for FY 12 e with respect to its sales volume is shown in the Exhibit below:

Exhibit 195: FY12-Sales sensitivity

## COMPANY UPDATE

# Reliance Industries Limited <br> Capex recovery under scanner 

## Key highlights

Ministry evaluating the option of limiting KG-D6 capex for cost recovery
Media reports indicated that Ministry is evaluating the option of limiting RIL's capex for cost recovery in D1-D3 to just USD3.4bn, in proportion to current gas production of 37 mmcmd from these fields. RIL has so far spent USD5.7bn on the two fields and has recovered USD5.3bn as revenues till FY1 1. Media sources also indicate that the Oil Ministry's views have been backed by the Solicitor General of India.
Such a move, if implemented, to impact KG-D6 valuations
Our evaluation of KG-D6 model under reduced capex recovery indicates a valuation hit of INR68/share for KG-D6 block, if approved. The peak profit sharing multiple of $85 \%$ with government which was earlier expected in FY19e may come in FY14e itself. This may have ~INR10/share impact on RIL's FY14e earnings due to higher profit petroleum paid. We believe this may also deter RIL to make future investments in these fields, unless clarity emerges on treatment of capex incurred, impacting future growth opportunities in domestic E\&P. We have however not accounted for the impact of this move in our valuations currently as there is no formal announcement from the ministry. Marketing margin issue also raised - negligible impact on valuations
DGH has also indicated that the marketing margins charged by RIL may also be made a part of the approved gas price for the purpose of computing cost and profit petroleum. RIL has claimed that marketing margin is a charge for marketing of gas beyond the delivery point and hence not cost recoverable under the PSC. We calculate that, if this is implemented, it would have a very negligible impact on DCF valuations and RIL's earnings.

## Valuation and outlook

We revise our valuations multiple for RIL's exploration upsides to USD1.5/boe to account for regulatory issues looming on E\&P assets and consequent procedural delays. We revise RIL's refining GRM assumptions to USD9.0/bbl and USD9.2/bbl for FY12e and FY13e respectively and apply a lower EV/EBITDA multiple of $6.5 x$. We also revise our FY13e Petchem EBITDA to INR108bn. In light of the above changes, we revise our target price to INR880/share and downgrade our recommendation to HOLD from BUY.

## Valuation and outlook

We value RIL based on SOTP methodology:

- We estimate RIL's FY13e Petchem EBITDA at INR108bn and apply an EV/EBITDA multiple of 7.0x, implying a value of INR253/share for RIL.
- We revise RIL's refining GRM assumptions to USD9.0/bbl (USD9.2/bbl earlier) and USD9.2/bbl (USD9.9/bbl earlier) for FY12e and FY13e respectively. We also apply a lower EV/EBITDA multiple of $6.5 x$ (earlier 7.0 x ) which is in line with regional peers.
- We value RIL's PMT field at EV/EBITDA multiple of 7.0x.
- For KG-D6 (D1, D3 and MA fields), we have arrived at a DCF value of INR391bn (INR131/share). We assume KG-D6 gas production at an average of $\sim 48 \mathrm{mmcmd}$ for FY12-13e. We currently do not incorporate the impact of pro-rata capex recovery in our valuations.
- We apply a lower EV/boe multiple of USD1.5/boe (USD3.0/boe earlier) for RLL's other E\&P assets to account for regulatory delays in getting approvals from government. We have valued contingent resources of fields/discoveries where declaration of commerciality (DoC) has been filed. The discoveries include 9 satellite discoveries at KG-D6, R-cluster at KG-D6, NEC-25 and other discoveries at GS-01 and CYD5. The DoC for these discoveries has been submitted to the DGH for approval. We have also valued D1 and D3 fields' 3P reserves, assuming a 40\% recovery and the same USD1.5/boe multiple.
- RIL's investments in shale gas is valued at $1.0 \times \mathrm{P} / \mathrm{BV}$ and retail assets at $0.6 \times \mathrm{BV}$.
- We do not account for RIL's CBM fields and other SEZ assets in our valuations any more. They were earlier valued at INR21/share and INR22/share respectively.

RIL's SOTP valuation

| Valuation of RIL on FY13e financials | Methodology | Multiple | EBITDA (INRbn) | $\begin{array}{r} \text { EV } \\ \text { (INRbn) } \end{array}$ | Value/share (INR) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Valuation of Petchem business | EV/EBITDA | 7.0 | 108 | 753 | 253 |

> RIL's E\&P asset valuation which was until now finding support from the USD7.2bn BP deal may not lend a hand

Govt. peak profit petroleum share of $85 \%$ to come much earlier than anticipated, if capex recovery is limited

## Ministry may enforce pro-rata cost recovery for RIL's KG-D6 field

- Media reports indicated that Ministry may limit RIL's capex for cost recovery in D1. D3 to just USD3.4bn, in proportion to current gas production from these fields.
- Such a move will however be contingent on the production sharing agreement with the government and/or D1-D3 production over the life of the asset.
- The Initial field development plan (FDP) of the D1, D3 fields was approved in Nov-04 with an estimated capex of USD2.5bn and approved production rate of 40 mmcmd from 14 producing wells up to 34 producing wells with corresponding facilities.
- Later, an Addendum to the Initial development plan was approved with a revised capex of USD8.8bn and an approved production rate of 80 mmcmd by Apr-2012 from 31 producing wells.
- Gas production from D1-D3 fields has however fallen to 37 mmcmd during FY12 compared to projected production of 62 mmcmd as per the FDP.
- Ministry has attributed the fall in output to non-fulfillment of RIL's commitment to drill 22 wells in the field.
- RIL has so far spent USD5.7bn on the two fields and has recovered USD5.3bn as revenues till FY1 1.

Profit sharing agreement for KG-D6 field
Recovery factor Consortium's profit share (\%)

| If Less than | $1.5 x$ | 90 |
| :--- | :--- | :--- |
| If Less than | $2.0 x$ | 84 |
| If Less than | $2.5 x$ | 72 |
| If greater than | $2.5 x$ | 15 |

Source: Industry
Under the KG-D6 PSC terms, RIL and consortium's profit share from the field reduces to $15 \%$ once it has recovered 2.5 x of its investments. We believe that such a move, if implemented, will reduce RIL's share of profit from these fields to $15 \%$ (from $90 \%$ currently) by FY14e itself instead of FY 19 e expected earlier. Thus pro-rata cost recovery is estimated to have a negative impact of INR68/share on the DCF value of D1-D3 fields.

RIL's profit share from D1-D3 field under the two scenarios

## COMPANY VISIT

## Atul Limited

## A potent concoction

We visited one of the facilities of Atul Limited at Valsad, Gujarat on Sep 23, 2011. Following are the key takeaways:

## Diversified business model

Atul Limited (Atul) is one of the oldest players in the chemicals Industry and has a broad-based product profile with products spanning across: Aromatics, Bulk chemicals \& intermediates, Colors, Pharmaceuticals \& intermediates, Crop protection/ Agrochemicals, Polymers and others. Apart from a diversified products profile, Atul has also built a well-spread revenues mix both on a geographical as well as industry basis. Its products now cater to aerospace, agriculture, automobile, construction, flavor \& fragrance, paint \& coatings, paper, personal care, pharmaceutical, textile and tyre industries.

## Positive trend in operations

In 90s, due to changing business and technological dynamics as well as altered environmental landscape, chemical business globally underwent huge structural changes. At the same time inefficiencies had also crept into Atul's operations and the same resulted in lackluster performance and a surging debt. However, over past decade the company has taken sustained steps to streamline its operations on all fronts. This has had discernible fallout, and in the last five years its revenues have posted a CAGR of $13 \%$, operating profits posting a CAGR of $19 \%$.

## Marked improvement in capital ratios

A focus on RoCE (product range wise) has resulted in three major business lines constituting almost 2/3rd of its revenues reporting RoCE in excess of $33 \%$ in FY 11 despite strong competition in most of these businesses. While other lines of business are commoditised and ail from lower returns, efforts are on to increase the operational as well as capital ratios in them. This has the potential to positively impact Atul's already improving capital ratios quite favourably. The company has managed to consistently reduce leverage over the year and improve margins as well as capital return ratios. This has also enabled it emerge as a free cash flow generating company.

[^4]
## Background and Business Model

Atul Limited was incorporated in 1947 and over the years has evolved as a player with strong presence in manufacturing \& marketing of chemicals. Its business line can be broadly classified into two main lines i.e Life sciences and Performance \& other chemicals. Within these, the main product ranges are Aromatics, Bulk chemicals \& intermediates, Colors, Pharmaceuticals \& intermediates, Crop protection/Agrochemicals, Polymers and others.

Presently, the major revenue contributors are Aromatics, Colors, Crop Protection \& Polymers. Over the years, Atul has not only been able to withstand cyclical economic downturns but also has been able to build upon its competitive advantages and secured market leadership in some of its product segments domestically as well as globally.

Its client profile ranges from aerospace, agriculture, automobile, construction, flavor \& fragrance, paint \& coatings, paper, personal care, pharmaceutical, textile and tyre. Its domestic revenues: exports ratio was 1.3 x in FY 11 , thus enabling it to have a diversity on geographical, client-wise as well as product range front. The company has always focused on business line and manage to eke out efficiencies from all aspects of business dynamics quite effectively.

It has manufacturing facilities in Valsad \& Ankleshwar, Gujarat and Tarapur, Maharashtra, backed by an employee base of $\sim 2,500$ and manufactures over 700 products serving over 2,500 clients worldwide. To cater to global customers, it has also built up bases in China, Germany, UK \& USA through a $100 \%$ subsidiary. Atul was early in tapping exports markets and the efforts have borne fruit as it now constitutes a large part of its revenues stream on a consistent basis.

In 90s, due to changing business and technological dynamics and altered environmental landscape, chemical business globally underwent huge structural changes. At the same time inefficiencies had also crept into Atul's operations and the same resulted in lackluster performance and a surging debt. However, over past decade the company has taken sustained steps to streamline its operations on all fronts. This has had discernible fallout and in the last five years its revenues have posted a CAGR of $13 \%$, operating profits posting a CAGR of 19\%.

## Revenue mix \& growth

FY11 geographical distribution of revenues

FY11 revenue break-up

Source: Company, Antique
Source: Company, Antique
The apparent business driver is the focus on RoCE (product range wise) and the same has resulted in three business lines constituting almost 2/3rd of its revenues reporting RoCE in excess of $33 \%$ in FY1 1. This is despite strong competition in most of these businesses. Its other lines of business are almost commoditised in nature and efforts are on to increase the operational metrics and any scale up in the same has the potential to impact Atul's already improving capital ratios quite favourably.

The company has exhibited a noticeable improvement in its EBIDTA margins over the past five years despite the steady uptrend in raw material prices. While exports could have provided some natural hedge, the improving efficiency of operations and product ranges have also helped.

RoE \& RoCE profile

Costing trend

## Product Groups

As mentioned, company's two business segments, i.e., 'Life Science Chemicals' and 'Performance \& Other Chemicals' have been distributed into seven diverse product groups so that respective product team can focus on their individual businesses which would ultimately help in improving operational efficiency. These product groups are: Aromatics, Bulk chemicals \& intermediates, Colors, Pharmaceuticals \& intermediates, Crop protection/Agrochemicals, Polymers and others.

## 1. Life Science Chemicals

## Crop Protection

Under the segment, Atul manufactures herbicides, fungicides and products are used by agriculture industry to protect their crops. It has a portfolio of 64 products which is distributed by 15,000 retail outlets. The major two product categories are 2,4 D group which has a 12\% market share and Indoxacarb with a market share of 7\%. In FY1 1, sales increased by $26 \%$ to INR3bn and recorded an RoCE of $45 \%$. It is estimated that the world market for crop protection is USD44bn and Indian market currently accounts for USD1 bn of the same. As population increases, the need to increase output \& yield of crops would ensure sustained demand for crop protection chemical which would eventually benefit players like Atul. Currently there are 60 major companies which dominate the world market place and about 10 in India.

The company has plans to increase its presence in this business as it is generates high RoCE despite the competitive pressures. Efforts are on to expand herbicide capacity, nurture branded business and also try to tap products which are coming offpatent. It is also exploring avenues of contract manufacturing through strategic alliance. However, competition from various quarters like low priced Chinese players, MNC generic players as new local entrants/ low priced suppliers could pose problems going ahead.

## Pharma \& Intermediates

Presently, this division is the smallest and contributes only $6 \%$ to the total revenues of the company. However, despite its size it recorded RoCE of $28 \%$ in FY11. Atul has a product portfolio of 30 products which is used by 80 clients in industries such as healthcare, Paper and aerospace.

## 2. Performance \& Other Chemicals

## Aromatics

Major product under the Aromatics division is p-cresol, and its downstream products: such as p-Anisic, Aldehyde, p-Anisic Alcohol, p-Cresidine and its byproducts: sodium sulphite \& manganese sulphate. Presently Atul has 21 products under its Aromatic porffolio and the same caters to personal care, pharmaceuticals and flavor \& fragrance industries. By nature, these industries are relatively insulated from economic cycles as their demand does not fluctuate drastically as compared to other industries. This product range is one of the largest as well as the most profitable for Atul as it reported revenues of INR3.5bn in FY11, with a RoCE of $40 \%$. Exports at INR1.3bn have exhibited a growth of $22 \%$ during the same period. As this division would have substantial exposure to overseas revenues, currency movement is the perpetual overhang. The company has a very impressive share within the product category with $p$-cresol enjoying a global market share of $35 \%$ p-AA $65 \%$, p-AA $140 \%$ and p-Cd $30 \%$. However, company is now witnessing competition from Chinese and European manufacturers.

## Bulk Chemicals \& Others

This Product group spans: Sodium Hydroxide, Chlorine, Sulphuric Acid, Oleum, Sulphur Trioxide, Chlorosulphonic Acid \& Resorcinol. However, the division mainly supplies chemicals to other division and recorded sales of INR980m during FY1 1. Apart from Oleum, which is primarily used for captive consumption, company has a domestic market share of $36 \%$ in the Resorcinol segment. It is estimated that the global market for resorcinol is USD275m and that of India currently stands at USD14m. Resorcinol is used in the automobile industry and hence its fortune has a direct correlation to the growth of this industry. As company expands its manufacturing capacities in Aromatics, Colors, Crop Protection, Pharmaceuticals \& intermediates and polymers, it is expected that captive consumption of bulk chemicals would grow. However, demand and prices of bulk chemical are cyclical in nature as $60 \%$ of the division's business is commodity based and driven by uncertain trends.

## Colors

This product group caters to multiple industries and contributes about $21 \%$ to the total revenues of the company and reported revenues of INR3.25bn. This segment had been reporting consistent losses over past few years, however, over last couple of years Atul has been able to successfully turnaround the operations through various restructuring initiatives and is now reporting profits at the operating level. Primary user industry of colors segment is the textile sector and as the sector grows, this segment is expected to perform well. Like textiles, automobiles, Paper dyes, HP pigments has a large market share in VAT dyes. This segment can be said to be laggard for the company as it ails from low RoCE and profitability. Efforts are on to reduce operational and fixed cost so that the profitability can be enhanced. The gameplan is to increase Vat dyes global market share through tapping overseas markets and maintain leadership in some of the product ranges.

Any improvement in this business segment has the potential to boost the overall capital ratios of the company as the segment accounts for a substantial part of revenues.

## Polymers

Polymers have been one of the best performing segments during FY1 1, as revenues exhibited a $65 \%$ growth of INR3.6bn. This group primarily comprises epoxy resins and hardeners and formulations and has a product portfolio of 80 and 220 formulations catering to industries like aerospace, automobile, construction, defense, electronics, footwear, handicraft, marine, Paint \& coatings, paper \& wind energy industries. As of date, world market for epoxy resins and hardeners is USD2Obn and that of India stands at USD300m. During the previous fiscal, company has been able to substantially improve their performance at the operating level with a lower capital base which meant an improvement in RoCE by 900bps to $33 \%$.

## Divisional Revenues and RoCE

| Product | Revenues | (INRm) |
| :--- | ---: | ---: | RoCE (\%)

Source: Company, Antique

## Financials

During financial year March'11, Atul recorded sales growth of $29 \%$ to INR15.6bn which was driven by $28 \%$ growth in the Life sciences chemicals segment and $30 \%$ growth in Performance \& other chemicals. The growth was led by a volume improvement of $\sim 16 \%$, and the rest was backed by value growth. Operating margins improved by $12 \%$, largely on account of its ability to increase prices on key product categories which ultimately led to a $37 \%$ growth in operating profits and $63 \%$ growth in the bottom line. All of above enabled the company to post RoE of $17.1 \%$ and RoCE of $17.8 \%$; a marked improvement from $11.8 \%$ and $12.7 \%$ recorded during the previous year. However, important point to note is its ability to generate substantial cash flow from operations which has helped them strengthen their balance sheet and improve their financial ratios.

As company was earlier burdened with high debt and operational inefficiency, major part of the profits were being eaten away by high interest cost and operating expenses. Interest as a percentage of revenues stood at $10 \%$ in FYO and has now eased to $1.7 \%$.

Over the last five years, the company has been able to stream line its operations and improve its operating metrics quite commendably. Its OPM improved from $8.3 \%$ in FYO7 to $12 \%$ in FY 11 , despite raw material inflation, which resulted in it as a percentage of revenues increasing from $56 \%$ in FY 07 to $57 \%$ in FY 11 . This conveys the improvement in operational and manufacturing efficiencies of the company. The improvement in PAT margins was from $2.5 \%$ to $5.7 \%$ during the similar period.

The company has also been able to improve its net working capital days considerably (from 105 days in FY 07 to 68 days in FY 11 ), despite a sharp scale up in revenues. This has enabled Atul to scale down its leverage ratio quite commendably. Also, as its capex is quite low, it has automatically translated into string cash flows and the company has all the makings of emerging as a free cash flow generating company over a sustained period of time. Ability to generate substantial cash flow from operations has meant that Atul has been able to improve its debt/equity ratio from 1.24x in FY07 to 0.58 x as of FY 11 and debt/EBITDA ratio from 4.7 x to 1.7 x which has also given them the ability to finance capex from internal sources rather than leveraging their balance sheet for funds. Return on equity and capital employed which stood at $8 \%$ and $8.1 \%$ in FYO7 has now improved to $17.1 \%$ and $17.8 \%$, respectively.

Source: Company, Antique
Source: Company, Antique

## Financing for capex

Source: Company, Antique
The company has one of the best dividend track records amongst its peers as save for FYOO, it has consistently paid dividends since it commenced operations in 1952. While the dividend/share has been stable, the payout ratio has been on a downtrend i.e $45 \%$ in FYO to $17 \%$ as of FY 11 .

## Quarterly results

During 1QFY12, Atul witnessed sales growth of $25 \%$ to INR4, 149 m from INR3,328m recorded during the corresponding period of previous year. Increase in sales was mainly contributed by $34 \%$ growth in the Life sciences category; whereas Performance and other chemicals grew by $22 \%$. 4QFY 11 onwards, company has changed its segmental reporting notes. Even on a sequential basis, Life Science Chemicals has shown substantial improvement compared to Performance and other Chemicals. As per new note, Life science and chemicals segment comprises of API inters, API, Herbicides, fungicides and tissue culture products. During the quarter, company saw their raw material cost jump by $40 \%$ which impacted their operating margins by 31 bps . As most of company's raw materials are based on crude oil prices, any adverse movement in the price of oil has the ability to dent their margins.

## Valuation and outlook

Currently, Atul trades at a trailing PE of 6.9x and EV/EBITDA multiple of 4.7x. For FY12e, company expects their sales to reach INR21-22bn. Our back of the envelop estimates convey that they will be able to maintain an OPM of 13-13.5\%. Based on low capex, reducing leverage and increasing OPM, the company has all the potential to emerge as a USDIbn revenues company with an OPM of $15 \%$ and a RoCE in excess of $25 \%$ in three years.

## Other data

The company holds investments in two listed entities i.e Novartis India Ltd. ( 0.38 m shares) and Wyeth Ltd.( 1.36 m shares) as of last reporting. The market value of these is estimated to be valued at INR1.67bn. While these are being carried at historical cost and there has been no indications of any divestment of the same, it is noteworthy that proceeds of any divestment can be put to good use by the company as its main line businesses are now increasing their RoCE.
