# Asia Pacific Radar Screen

## May 2007: Country Perspective

- **Markets Recover** — All four quadrants posted positive returns last month. Attractive and Contrarian quadrants were up 1.9% and 1.8%, respectively, outperforming both the Glamour quadrant (up 1.6%) and the Unattractive quadrant (up 1.3%), suggesting Value is more important.
- **Attractive/Unattractive Spread** — Our preferred return measure, the spread between average stock returns in the Attractive and Unattractive quadrants, was again positive, up 0.6% last month, which leaves the rolling 12m spread up 27.6%.
- **Top Markets** — Singapore, Hong Kong and Australia, the only markets that fall in the Attractive quadrant (reasonable valuations and strong momentum support) take the top three places – with Malaysia, which still falls in the Glamour quadrant, remaining in fourth.
- **Bottom-Ranked Markets** — India, New Zealand, and Thailand are our bottom-ranked markets, reflecting the Indian market's rather vulnerable valuations, New Zealand's improved and Thailand's somewhat weaker recent momentum.

## Asian Idols and Double Trouble

Our Asia Radar Model looks to deliver superior returns in an Asia Pacific coverage universe of ~1,500 stocks. While value and momentum strategies work separately, a combination of the two has produced better returns with lower volatility (more than a 30% p.a. quintile spread over the past five years).

Our Intersection Model takes this process a stage further — selecting stocks from “extreme corner” portfolios (e.g., extreme value + extreme momentum). This approach is of particular relevance to investors with a pure ‘value mandate’ who have traditionally found it hard to effectively utilize the Radar Combination Model. Since 1996, the quintile spread across these groups has been more than 50% p.a., even higher than for the Combination Model.

In the tables below, we highlight names from the extreme corners of our Radar quadrants: Asian Idols and Double Trouble. These are stocks in which our positive or negative quant view is in agreement with that of our fundamental sector analysts.

### How to Read the tables

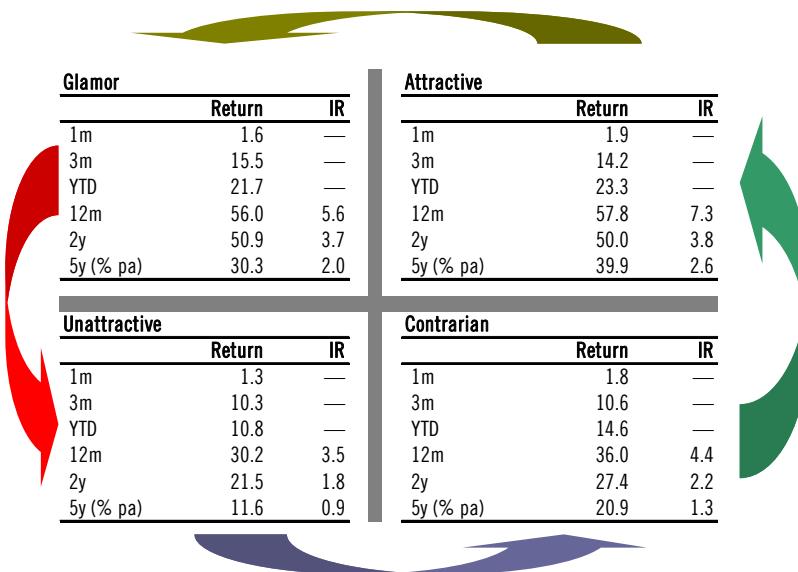

*Comp = Rank on equally weighted composite score across both the value and momentum legs; Value = Rank on the ratio of actual to theoretical fair value on P/E or P/B model; Momentum = Rank on the equally weighted averages of price momentum and earnings momentum (ERR, or earnings revisions ratio). For fuller explanation, see The Structure of Radar Screen (pg 29).*

## The Lifecycle of an Investment

Conceptually, the basic Radar Quadrant diagram also helps explain how the market's perception of a company might change over time and how this would often impact valuations and the stock price.

Radar aims to model both the fundamental "valuation" component of a stock's returns and the behavioral or "market-perception" element

**Figure 4. Quadrant Evolution**

Source: Factset, IBES, Worldscope and Citigroup Investment Research

Relating the quadrants to investor behavior helps one understand why it works...

**Contrarian:** A sound business with good earnings prospects is inexpensive but is overlooked by the investment community.

**Attractive:** Investors become aware of a stock's potential and buy it. Price momentum improves and analysts start following the stock. Earnings revisions are positive and momentum improves more. It moves into the Attractive quadrant.

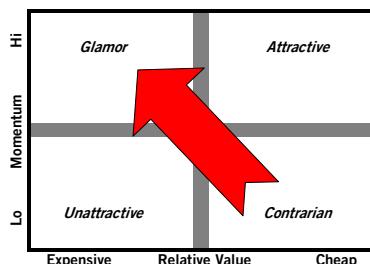

**Glamour:** Investor interest helps drive the stock price and valuation higher. The stock no longer looks inexpensive (it has got ahead of its fundamentals), yet it remains in favor and momentum remains strong. It now sits in the Glamour quadrant.

**Unattractive:** Recognizing that valuations are stretched, investors start selling and momentum deteriorates. The stock falls into the Unattractive quadrant — until fundamentals catch up, when it might again become Contrarian.

This is obviously an idealized path, and at any time fundamentals or perception can change. For example, anticipating future earnings, investors might buy a stock, and in so doing might push a stock into the "Glamour" category. However, if the company delivers earnings, valuations would improve and the stock would move back into the Attractive quadrant.

Similarly, a stock in the Contrarian category might start missing earnings and/or earnings growth estimates may fall. This would lead to justified valuations falling — and hence it may start looking expensive: i.e., it would migrate into the Unattractive quadrant.

... which also makes it important to understand how the key drivers at the stock level impact how the model evaluates a stock

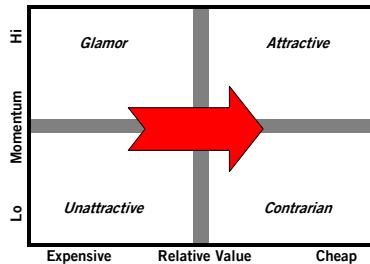

**Figure 5. Rising Prices & Stronger Momentum**

Source: Citigroup Investment Research

## Understanding the Drivers

Rising stock prices — Rising prices alone make stocks more expensive, but it also implies improving long-term price momentum and, all else being equal, stronger momentum characteristics.

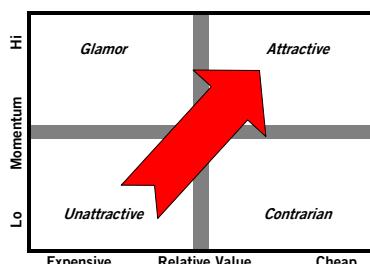

On the quadrant diagram, this equates to a diagonal shift upward and to the left.

**Figure 6. Increasing Market Cap**

Source: Citigroup Investment Research

Increasing market cap — Generally, large-cap stocks are more highly valued than small-cap stocks, if for no reason other than a liquidity premium being ascribed to these stocks.

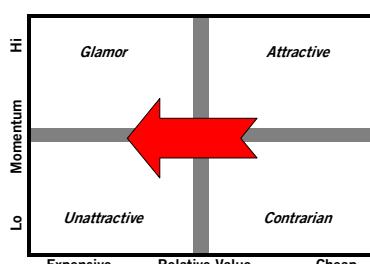

Because a secondary effect of rising stock prices is a marginal increase in capitalization, we should therefore also see a slight increase in the justifiable valuation of all stocks, which would go some way to offsetting the higher valuation.

**Figure 7. Estimate Upgrades**

Source: Citigroup Investment Research

Improving analyst forecasts — As the analyst community raises estimates, our growth estimate would also rise, thereby resulting in higher justified valuations.

At the same time, the earnings revision-ratio (ERR) would improve. This would translate into stronger momentum. The impact of the analyst community upgrading a stock would therefore be a diagonal upward shift to the right on the radar map.

**Figure 8. Rising Interest Rates**

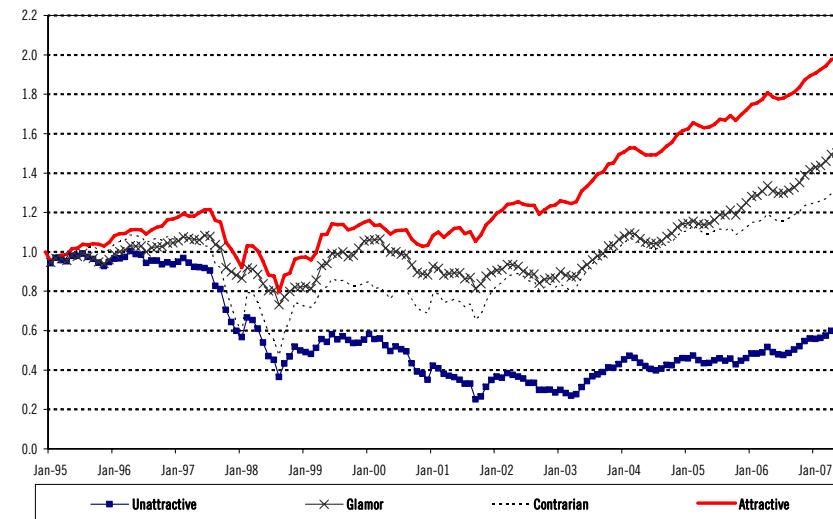

Source: Citigroup Investment Research

Rising interest rates — Higher interest rates translate into lower theoretical valuations. Hence, as interest rates rise the stock would shift to the left on the value/momentum radar quadrant.

## Regional Overview

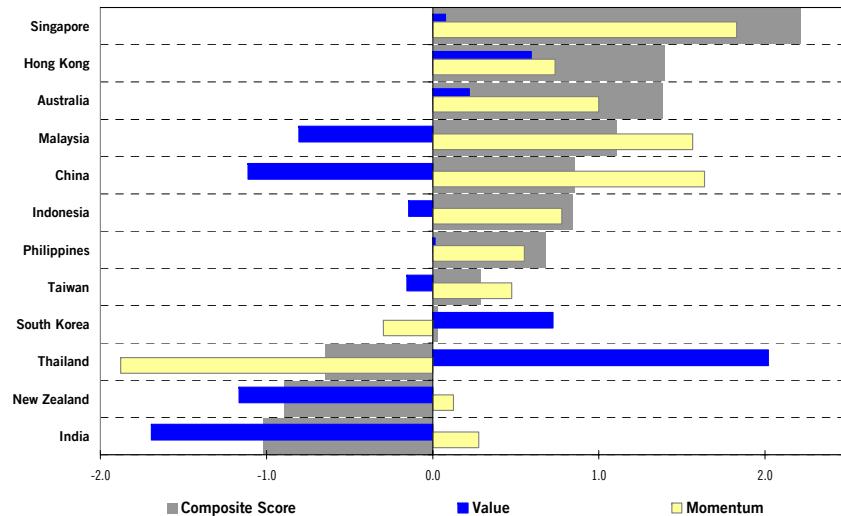

- Markets Recover** — All four quadrants posted positive returns last month. Attractive and Contrarian quadrants were up 1.9% and 1.8%, respectively, outperforming both the Glamour quadrant (up 1.6%) and the Unattractive quadrant (up 1.3%).
- Attractive/Unattractive Spread** — Our preferred return measure, the spread between average stock returns in the Attractive and Unattractive quadrants, was again positive, up 0.6% last month, which leaves the rolling 12m spread up 27.6%.
- Top Markets** — This month, the top rankings have a more rational flavor and are less momentum dominated, with Singapore taking over the top spot from Hong Kong. Hong Kong and Australia, the only other markets that fall in the Attractive quadrant (reasonable valuations and strong momentum support) take the other two spots in the top three – with Malaysia, which still falls in the Glamour quadrant, remaining in fourth.
- Bottom-Ranked Markets** — India, New Zealand, and Thailand are our bottom-ranked markets, reflecting the Indian market's rather vulnerable valuations, New Zealand's improved and Thailand's declining momentum characteristics.

## Korea - Contrarian

- Still Contrarian** — Momentum improves further in Korea but not enough to materially impact its ranking - Korea remains in the Contrarian quadrant and ninth in the ranking.
- Radar performance**— The Attractive quadrant outperformed all others over the month, returning 3.6%; the Attractive/Unattractive spread was positive, delivering another 0.9% bringing the last 12m return to 36.1%.
- Korea stock picks** – SK Corp, Korea Exchange Bank and Dongkuk Steel Mill all rank well on the model this month. Hanjin Shipping moved down into the Contrarian quadrant as relative momentum deteriorates.
- Unattractive** — Names that rank poorly this month include CJ Corp, Hyundai Autonet and Hotel Shilla.

## Taiwan – Glamour

- Glamour** – Taiwan moves up two places in the rankings, on the back of materially improving momentum caused by earnings revisions. It is still in the bottom half of markets on the composite ranking but moves into the Glamour quadrant as a result.
- Radar Performance** – Names in the Glamour quadrant actually outperformed the others last month, returning 1.5%. Yet again the Attractive/Unattractive spread was positive – up 0.8% over the month, 7.8% over the past 3 months and 26.8% over the past year.
- Top picks** — China Steel Corp and Teco Electric & Machinery are new entrants to the list of stars in Taiwan where they join China Dev Financial Corp and Tung Ho Steel Ent Corp.
- Bottom picks** — While our analysts like both Sinopec Financial and AU Optronics, both remain firmly in the Unattractive quadrant and feature (again) on our list of most unattractive names.

## Hong Kong - Attractive

- Outlook** — Hong Kong falls one place to rank second on the composite score this month due to weakening momentum. Hong Kong maintains its attractiveness on a relative value basis.
- Radar Performance** — The Attractive Quadrant again performed the best last month returning 3.5%. The Attractive/Unattractive quadrant spread has now been positive every month since January 2006 and added a further 2% last month bringing the performance over the last 12 months to 26%.
- Stock Picks** — Citic Pacific continues to be a Quant star (this is a stock which the fundamental analysts like as well) and is joined this month by Hang Lung and Jardine Strategic.
- Bottom picks** — PCCW is a Quant dog for this month, though it is rated a Buy by fundamental analysis and thus could be a contrarian play. Johnson Electric continues to be on the dog's list and has weakened further in terms of relative value.

## China - Glamour

- Glamour** – Improving earnings revisions momentum has triggered a rise in China's ranking and it has leapfrogged Thailand and Indonesia to move into the top half and end up in fifth place. Nothing much has changed from a relative value perspective though; valuations still appear rather stretched.
- Performance** — The best-performing names last month were the low-momentum cheap names in the Contrarian quadrant (up 2.5%). Our preferred return measure; the Attractive/Unattractive spread, was positive at 0.8% and the Attractive quadrant has returned 88.8% over the last 2 years.
- Stock Picks** — China Petroleum, Huaneng Power and China Shipping still rank highly on the quant model, while Suntech Power Holdings, China Eastern Airlines 'H' and Qingling Motors all score poorly. China Petroleum is ranked a Sell by our fundamental analyst and thus could be a contrarian play.

## Thailand - Contrarian

- Contrarian** — Thailand remains in the Contrarian quadrant but fading momentum sees it fall down the rankings and it is now third from the bottom.
- Earning Revisions** — Much of this decline is due to deteriorating earnings momentum – and earnings revisions remain a useful indicator to watch within the Thai market.
- Radar Performance** — The Unattractive and Contrarian quadrants both performed well, rising 3.0% and 2.9%, respectively, while the Glamour and Attractive quadrants returned 1.9% and 1.2%, respectively.
- Top Picks** — Stocks that still rank highly on both relative value and momentum include Thoresen Thai Agencies, Thai Plastic & Chem, and Cal-Comp Elec Thailand.

## Singapore - Attractive

- Numer One** — Singapore rises to top our rankings this month following improvement in earnings revisions and long-term price momentum. An improvement in relative value saw it move out of the Glamour quadrant last month, and this remains the case this month as well.
- Model Performance** — Radar continues to perform well in Singapore with the spread between average returns in the Attractive and Unattractive being positive again, which brings 12-month outperformance to 29.3%.
- Top Picks** — Golden Agri-Resources, United Ind Corp and Wing Tai are our top picks for this month. Meanwhile Singapore Airlines, which we have liked for some time, falls out of the extreme corner list although it remains in the Attractive quadrant.
- Bottom Picks** — Chartered Semi Manufacturing, Hyflux and WBL Corp are quant dogs for this month.

## Malaysia - Glamour

- Untouched** — Malaysia remains at fourth on the composite ranking this month. Malaysian equities display strong long-term price momentum – though this has lately started to taper off - but below average valuations.
- Model Performance** — Glamour quadrant was the best-performing quadrant last month returning 2.7% followed by the Contrarian quadrant – at 2.5%. The momentum-side of the equation continues to be relevant in Malaysia with Earnings revisions proving particularly helpful at differentiating stocks. The radar composite model struggled in Malaysia with the Attractive/Unattractive spread losing 0.6% last month.
- Stocks ranking poorly on relative value and momentum in Malaysia include EON Capital, Astro All Asia Networks, and Sunrise.
- Top picks in Malaysia are Tenaga Nasional, Lion Diversified Holdings and WTK.

## India - Glamour

- Deteriorating Momentum** — While India remains in the Glamour quadrant it now drops to the bottom of the rankings on declining momentum support and is just shy of falling into the Unattractive quadrant. Valuations continue to appear expensive relative to the region.
- Radar performance** — Radar model struggled in India, remaining flat for the month, though over 12 months it has returned 26.6%.
- Top picks** — ONGC is a new entrant to the Quant stars list in India, along with State Bank of India and JSW Steel.
- Bottom picks** — Stocks that rank poorly on our relative value/momentum Radar model are Siemens India, Voltas and Matrix Laboratories.

## Australia - Attractive

- Still Third** — Again our third-ranked market, Australia continues to deliver above-average scores on both relative value and momentum.
- Strong Performance** — Our favored measure of performance, the return spread between the Attractive and Unattractive quadrants, was again positive last month (up 0.7%) while the rolling 12-month performance now stands at 37.3%.
- Stock picks** — Australian names that feature on our stars list this month are Suncorp-Metway, Stockland Australia and Centro Props.
- Bottom picks** — Newcrest Mining, Lihir Gold and Iluka Res are names that are ranked lowly by our model.

## The Structure of Radar Screen

There are two components to Asia Pacific Radar Screen: valuation and momentum. The following sections cover the basics of each. For more details please see Refining the Radar, 15 April 2006.

**Figure 46. Radar — Combining Value and Momentum Legs**

Source: CIR

### Factors impacting valuation:

- 1) Earnings growth
- 2) Market capitalization
- 3) Cost of debt

### Valuation

To measure the valuation of a stock we look at its actual P/E compared to an estimate of its fair value P/E. The fair value P/E is derived from three inputs.

**Earnings growth** — Higher earnings growth, both actual and expected, leads to a higher fair value P/E. Other things equal, stronger earnings growth will result in a cheaper valuation for a stock.

**Market capitalization** — Higher market capitalization results in a valuation premium on a stock — a higher fair value P/E. This can be interpreted as a combination of liquidity and index inclusion effects and lower firm-level risk.

**Cost of debt** — Firms with a higher cost of debt tend to have lower valuations.

To determine the relative value of a stock we subtract the fair value estimate P/E from the latest actual P/E. Stocks are ranked based on this difference. A stock with an actual P/E higher than its fair value P/E would receive a poor ranking for valuation, and vice versa.

### Components of momentum:

- 1) Price momentum
- 2) Earnings estimate revisions

### Momentum

A particular stock may appear inexpensive, but it may stay cheap. We look for stocks not only with good valuations but also those with evidence of momentum. We measure momentum in two ways.

**Price momentum** — This is a risk-adjusted price change measure estimated for 12 months. Strong, consistent price gains result in the highest price momentum.

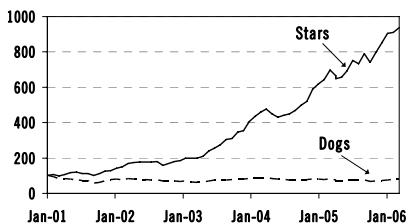

**Earnings revisions** — This is the net proportion of analysts who are upgrading their view on forward earnings. A large number of analysts revising earnings expectations upwards relative to those revising earnings downwards results in a stronger measure of earnings revisions.

Composite momentum is simply an average of these two components, price momentum and earnings revisions.

## Stock Quadrants

Each stock in our universe receives two ranks: one for valuation and one for momentum. Each of these ranks ranges from 0 to 1; the closer to 1 the more attractive the stock is. Based on these ranks, we can plot the position of stocks within a country or a sector on a scatter plot of valuation and momentum.

**Figure 47. Cumulative Returns of Stars and Dogs**

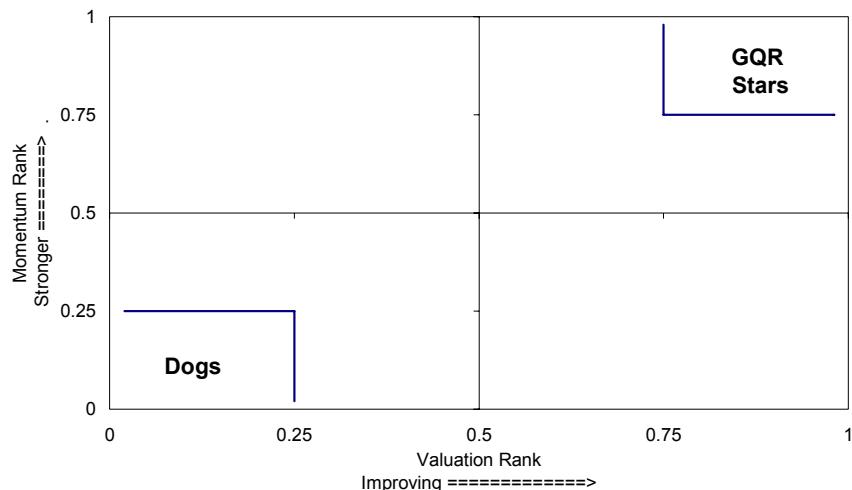

Source: Citigroup Investment Research

## GQR Stars and Dogs

We focus on stocks in the extreme upper right-hand corner – this region contains stocks with high ranks for both valuation and momentum. Stocks falling in this quadrant are the GQR Stars.

Similarly, the extreme lower left-hand quadrant-of-quadrants contains stocks with extremely low ranks for both valuation and momentum. Stocks falling in this region make up the Dogs.

**Figure 48. The GQR Stars and Dogs on a Valuation/Momentum Scatter Plot**

Source: Citigroup Investment Research

Each of the Stars and Dogs lists has approximately 70 stocks on it.

## Asian Idols and Double Trouble

As a further refinement of our Stars and Dogs methodology, we look for stocks where our quantitative view is in-line with the fundamental rating from the analyst. GQR Stars, which are also rated a Buy by CIR's fundamental analysts, are termed the Asian Idols. The Dogs, which are also rated a Sell by CIR's fundamental analysts, are termed the Double Trouble list.

These are generally much shorter lists, generally each with less than 20 names. Backtests suggest that this highly focused strategy has delivered strong, achievable returns.

## The Screener Tool

Asia Pacific Radar Screen covers some 1,500 stocks

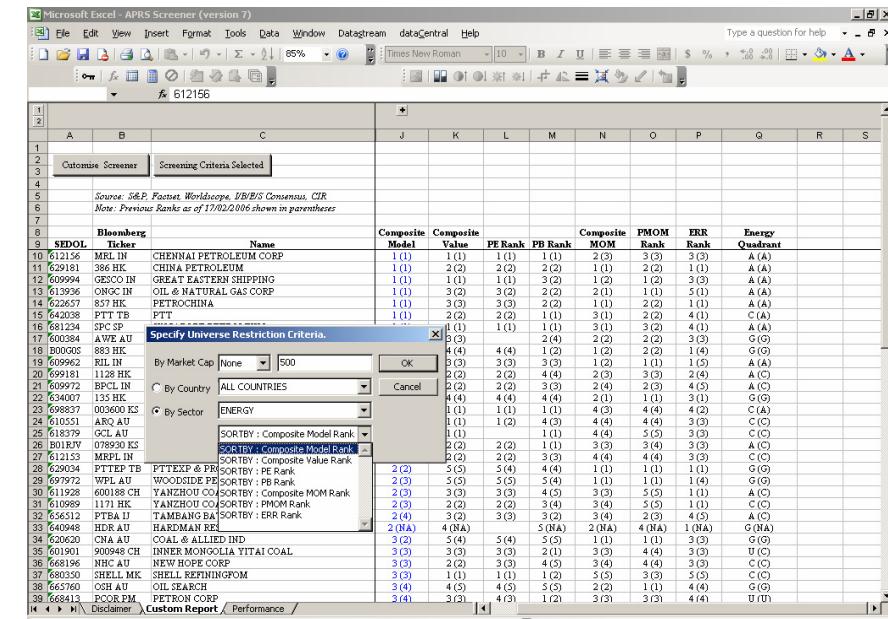

Asia Pacific Radar now encompasses some 1,500 stocks (versus 1,100 before) across the region: no printed document can include so many names. Hence, we offer a screening tool – updated every two weeks.

## Using and Interpreting the Screener Output

Using the Excel selection tool, a universe may be selected (a country or a sector), along with any market cap criteria desired.

The screening tool generates a ranking across the selected universe, sorted by the chosen factor. In addition, the "Performance" sheet is updated providing an insight into how well the Radar model performs within the selected universe.

**Figure 49. Using the Screener to Select an Energy Universe**

Source: FactSet; IBES; Worldscope; CIR, FactSet; IBES; Worldscope; CIR.

## Interpreting the Screener Output

The screener generates a snapshot showing the universe ranked on the chosen part of the Radar model. The ranks are based on the quintile score: i.e. companies that fall in the top 20% of companies on that measure receive a “1”, while companies that fall in the bottom 20% receive a “5”. In each case the ranking one month ago is shown in brackets. The component parts of the model are:

- **Composite Model Rank** – an equally weighted composite score across both the value and momentum legs
- **Composite Value Rank** – the value score: for all companies for which there is a P/E score, this is based on the ratio of actual to fair value on the P/E model, otherwise the ratio of actual to fair value on the P/Book model is used. The rankings of the companies on both sub-models are also shown independently
- **Composite Momentum Rank** – an equally weighted average of the price momentum, and earnings momentum legs: again the scores for the subcomponent models are shown
- **Quadrant membership** – where the stock falls in a Radar Quadrant Chart relative to the chosen universe. Stocks that fall in the top-right hand “**Attractive**” quadrant are labeled “A”; those in the top left-hand “**Glamour**” quadrant are labeled “G”; those in the bottom right-hand “**Contrarian**” quadrant are labeled “C” and those in the bottom left-hand “**Unattractive**” quadrant are labeled “U”

**Figure 50. Example of Part of the Screening Tool Output**

Source: FactSet; IBES; Worldscope; CIR.

In addition to the data which relates directly to the Value/Momentum model (described above), there are a number of hidden columns that contain more descriptive data. Clicking the “+” icon above column ‘J’ reveals this data. These columns show:

- Country and sector membership for the stock;
- The current stock price;
- The companies market cap (in millions of US\$);
- The CIR fundamental analysts rating, if the stock is covered; and
- The CIR fundamental analysts' target price for covered stocks.

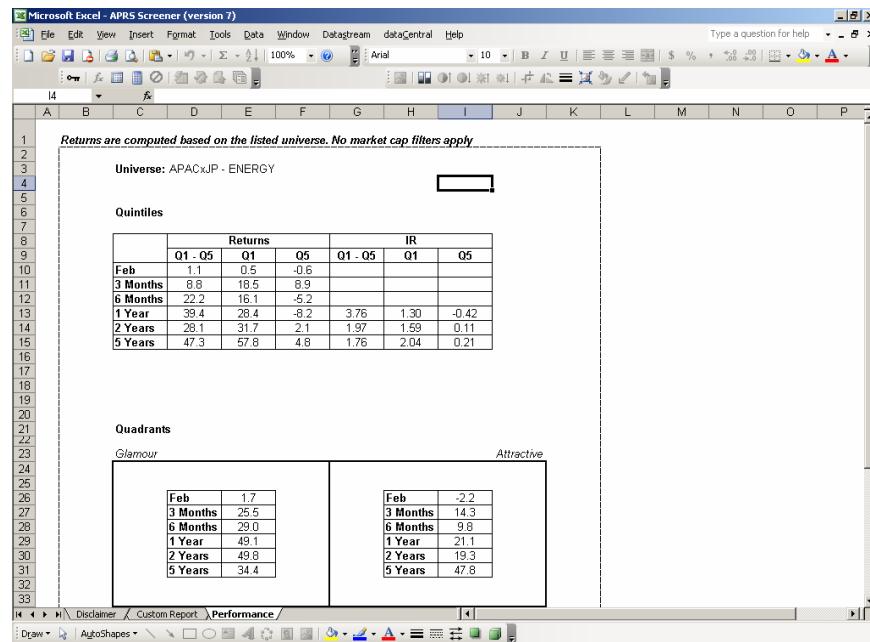

### Performance data

Finally, on the separate sheet labeled “Performance”, updated back-test results across the chosen universe (excluding any size-filters) are shown. All results are pre-transaction cost.

The first part of this performance summary shows the spread on the combination model: i.e., the performance of stocks in the top 20% vs. performance of stocks in the bottom 20% on the combination rank within the universe – along with the geometrically chained monthly performance spread.

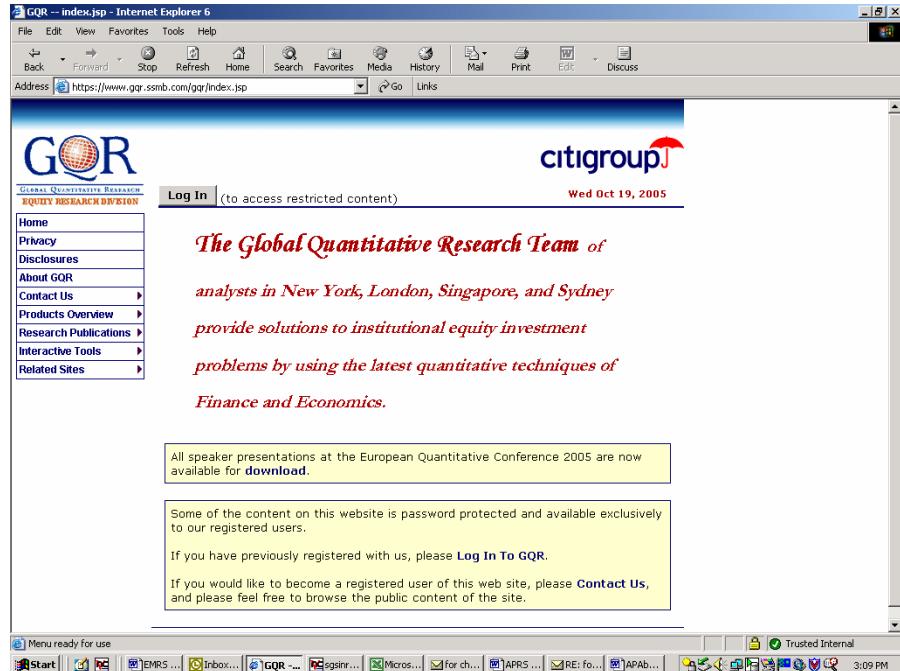

Figure 93 shows how the intersection model works in this universe, providing a summary performance of stocks that fall in: the Attractive top-right hand corner (labeled “A”), those in the Glamour top left-hand quadrant (“G”), those in the Contrarian bottom right-hand quadrant (“C”), and those in the bottom Unattractive left-hand quadrant (“U”).

Citigroup Global Markets Inc. or an affiliate received compensation in the past 12 months from AMP Ltd, ANZ Banking Group Ltd, China Communications Construction, Commonwealth Bank of Aust. Ltd, Dr. Reddy's, Esprit, Flextronics, Grasim Industries, Hindalco Industries, Hindustan Zinc, HYFLUX LTD., Insurance Australia Group Ltd, Li & Fung, Macquarie Bank Ltd, Melco PBL Entertainment (Macau), Mengniu Dairy, QBE Insurance Group Ltd, SHANGRI-LA ASIA LTD., Shinhan Financial, SK Telecom, Stockland, Suncorp-Metway Ltd, Telstra Corporation Ltd, Toll Holdings Ltd, Valad Property Group and Westpac Banking Corporation.

Analysts' compensation is determined based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates ("the Firm"). Like all Firm employees, analysts receive compensation that is impacted by overall firm profitability, which includes revenues from, among other business units, the Private Client Division, Institutional Sales and Trading, and Investment Banking.

The Firm is a market maker in the publicly traded equity securities of AU Optronics, Bank of East Asia, BHP Billiton Ltd, Chartered Semiconductor, Cheung Kong, China Life Insurance, China Mobile, Chunghwa Telecom, CITIC Pacific, CLP Holdings, CNOOC, DBS Group, Dr. Reddy's, Flextronics, Focus Media, Foster's Group Ltd, Hang Lung Properties, Henderson Land, Hong Kong & China Gas, Hongkong Electric, Hutchison Whampoa, Hysan Development, i-CABLE Communications Ltd, ICICI Bank, Infosys Technologies, Jardine Matheson, Johnson Electric, KEPCO, Keppel, Kookmin Bank, KT Corp., Lenovo Group, Lihir Gold Ltd, Melco PBL Entertainment (Macau), New World Development, Newcrest Mining Ltd, NOL, PetroChina, POSCO, Rio Tinto Ltd, Ryder System Inc, Satyam Computers Services, Shun Tak, Sina Corp., SingTel, Sino Land, Sinopec, SK Telecom, SPIL, Sun Hung Kai Properties, Swire, Telstra Corporation Ltd, TSMC, UMC, UOB, Westfield Group and Wipro.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citigroup Investment Research product ("the Product"), please contact Citigroup Investment Research, 388 Greenwich Street, 29th Floor, New York, NY, 10013, Attention: Legal/Compliance. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at [www.citigroupgeo.com](http://www.citigroupgeo.com). Private Client Division clients should refer to [www.smithbarney.com/research](http://www.smithbarney.com/research). Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

### Guide to Fundamental Research Investment Ratings:

Citigroup Investment Research's stock recommendations include a risk rating and an investment rating.

**Risk ratings**, which take into account both price volatility and fundamental criteria, are: Low (L), Medium (M), High (H), and Speculative (S).

**Investment ratings** are a function of Citigroup Investment Research's expectation of total return (forecast price appreciation and dividend yield within the next 12 months) and risk rating.

For securities in developed markets (US, UK, Europe, Japan, and Australia/New Zealand), investment ratings are: Buy (1) (expected total return of 10% or more for Low-Risk stocks, 15% or more for Medium-Risk stocks, 20% or more for High-Risk stocks, and 35% or more for Speculative stocks); Hold (2) (0%-10% for Low-Risk stocks, 0%-15% for Medium-Risk stocks, 0%-20% for High-Risk stocks, and 0%-35% for Speculative stocks); and Sell (3) (negative total return).

For securities in emerging markets (Asia Pacific, Emerging Europe/Middle East/Africa, and Latin America), investment ratings are: Buy (1) (expected total return of 15% or more for Low-Risk stocks, 20% or more for Medium-Risk stocks, 30% or more for High-Risk stocks, and 40% or more for Speculative stocks); Hold (2) (5%-15% for Low-Risk stocks, 10%-20% for Medium-Risk stocks, 15%-30% for High-Risk stocks, and 20%-40% for Speculative stocks); and Sell (3) (5% or less for Low-Risk stocks, 10% or less for Medium-Risk stocks, 15% or less for High-Risk stocks, and 20% or less for Speculative stocks).

Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

---

### Guide to Corporate Bond Research Credit Opinions and Investment Ratings:

Citigroup Investment Research's corporate bond research issuer publications include a fundamental credit opinion of Improving, Stable or Deteriorating and a complementary risk rating of Low (L), Medium (M), High (H) or Speculative (S) regarding the credit risk of the company featured in the report. The fundamental credit opinion reflects the CIR analyst's opinion of the direction of credit fundamentals of the issuer without respect to securities market vagaries. The fundamental credit opinion is not geared to, but should be viewed in the context of debt ratings issued by major public debt ratings companies such as Moody's Investors Service, Standard and Poor's, and Fitch Ratings. CBR risk ratings are approximately equivalent to the following matrix: Low Risk Triple A to Low Double A; Low to Medium Risk High Single A through High Triple B; Medium to High Risk Mid Triple B through High Double B; High to Speculative Risk Mid Double B and Below. The risk rating element illustrates the analyst's opinion of the relative likelihood of loss of principal when a fixed income security issued by a company is held to maturity, based upon both fundamental and market risk factors. Certain reports published by Citigroup Investment Research will also include investment ratings on specific issues of companies under coverage which have been assigned fundamental credit opinions and risk ratings. Investment ratings are a function of Citigroup Investment Research's expectations for total return, relative return (to publicly available Citigroup bond indices performance), and risk rating. These investment ratings are: Buy/Overweight the bond is expected to outperform the relevant Citigroup bond market sector index (Broad Investment Grade, High Yield Market or Emerging Market), performances of which are updated monthly and can be viewed at <http://www.sd.ny.ssmb.com/> using the "Indexes" tab; Hold/Neutral Weight the bond is expected to perform in line with the relevant Citigroup bond market sector index; or Sell/Underweight the bond is expected to underperform the relevant sector of the Citigroup indexes.

### Guide to Quantitative Research Investment Ratings:

Citigroup Investment Research Quantitative Research World Radar Screen recommendations are based on a globally consistent framework to measure relative value and momentum for a large number of stocks across global developed and emerging markets. Relative value and momentum rankings are equally weighted to produce a global attractiveness score for each stock. The scores are then ranked and put into deciles. A stock with a decile rating of 1 denotes an attractiveness score in the top 10% of the universe (most attractive). A stock with a decile rating of 10 denotes an attractiveness score in the bottom 10% of the universe (least attractive).

Citigroup Investment Research Quantitative Decision Tree model recommendations are based on a predetermined set of factors to rate the relative attractiveness of stocks. These factors are detailed in the text of the report. Each month, the Decision Tree model forecasts whether stocks are attractive or unattractive relative to other stocks in the same sector (based on the Russell 1000 sector classifications).

Citigroup Investment Research Quantitative European Value & Momentum Screen recommendations are based on a European consistent framework to measure relative value and momentum for a large number of stocks across the European Market. Relative value and momentum rankings are equally weighted to produce a European attractiveness score for each stock. The scores are then ranked and put into deciles. A stock with a decile rating of 1 denotes an attractiveness score in the top 10% of the universe (most attractive). A stock with a decile rating of 10 denotes an attractiveness score in the bottom 10% of the universe (least attractive).

Citigroup Investment Research Asia Quantitative Radar Screen and Emerging Markets Radar Screen model recommendations are based on a regionally consistent framework to measure relative value and momentum for a large number of stocks across regional developed and emerging markets. Relative value and momentum rankings are equally weighted to produce a global attractiveness score for each stock. The scores are then ranked and put into quintiles. A stock with a quintile rating of 1 denotes an attractiveness score in the top 20% of the universe (most attractive). A stock with a quintile rating of 5 denotes an attractiveness score in the bottom 20% of the universe (least attractive).

Citigroup Investment Research Quantitative Australian Stock Selection Screen rankings are based on a consistent framework to measure relative value and earnings momentum for a large number of stocks across the Australian market. Relative value and earnings momentum rankings are weighted to produce a rank within a relevant universe for each stock. The rankings are then put into deciles. A stock with a decile rating of 1 denotes an attractiveness score in the top 10% of the universe (most attractive). A stock with a decile rating of 10 denotes an attractiveness score in the bottom 10% of the universe (least attractive).

Citigroup Investment Research Quantitative Research Australian Scoring Stocks model recommendations are based on a predetermined set of factors to rate the relative attractiveness of stocks. These factors are detailed in the text of the report. Each month, the Australian Scoring Stocks model calculates whether stocks are attractive or unattractive relative to other stocks in the same universe (the S&P/ASX 100) and records the 5 most attractive buys and 5 most attractive sells on the basis of the criteria described in the report.

---

For purposes of NASD/NYSE ratings-distribution-disclosure rules, a Citigroup Investment Research Quantitative World Radar Screen and European Value & Momentum Screen recommendation of (1), (2) or (3) most closely corresponds to a buy recommendation; a recommendation from this product group of (4), (5), (6) or (7) most closely corresponds to a hold recommendation; and a recommendation of (8), (9) or (10) most closely corresponds to a sell recommendation.

For purposes of NASD/NYSE ratings distribution disclosure rules, a Citigroup Investment Research Asia Quantitative Radar Screen or Quantitative Emerging Markets Radar Screen recommendation of (1) most closely corresponds to a buy recommendation; a Citigroup Investment Research Asia Quantitative Radar Screen or Quantitative Emerging Markets Radar Screen recommendation of (2), (3), (4) most closely corresponds to a hold recommendation; and a recommendation of (5) most closely corresponds to a sell recommendation.

For purposes of NASD/NYSE ratings-distribution-disclosure rules, a Citigroup Investment Research Quantitative Research Decision Tree model recommendation of "attractive" most closely corresponds to a buy recommendation. All other stocks in the sector are considered to be "unattractive" which most closely corresponds to a sell recommendation.

Recommendations are based on the relative attractiveness of a stock, they can not be directly equated to buy, hold and sell categories. Accordingly, your decision to buy or sell a security should be based on your personal investment objectives and only after evaluating the stock's expected relative performance.

For purposes of NASD/NYSE ratings-distribution-disclosure rules, a Citigroup Investment Research Quantitative Australian Stock Selection Screen model ranking in the top third of the universe most closely corresponds, subject to market conditions, to a buy recommendation. A ranking in the bottom third of the universe, subject to market conditions, most closely corresponds to a sell recommendation. All other stocks in the universe correspond to a hold recommendation. However, because Citigroup Investment Research Quantitative Australian Stock Selection Screen model rankings are based on the relative attractiveness of a stock as compared to other stocks in the same universe, they can not be directly equated to buy, hold and sell categories. Accordingly, your decision to buy or sell a security should be based on your personal investment objectives and only after evaluating the stock's expected absolute performance.

For purposes of NASD/NYSE ratings-distribution-disclosure rules, membership of the Citigroup Investment Research Quantitative Australian Scoring Stocks Model buy portfolio most closely corresponds to a buy recommendation; membership of the Citigroup Investment Research Quantitative Australian Scoring Stocks Model sell portfolio most closely corresponds to a sell recommendation. However, because Citigroup Investment Research Quantitative Australian Scoring Stocks Model recommendations are based on the relative attractiveness of a stock, they can not be directly equated to buy, hold and sell categories. Accordingly, your decision to buy or sell a security should be based on your personal investment objectives and only after evaluating the stock's expected absolute performance.

---

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the subject company(ies) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

---

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to,

discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citigroup Investment Research does not set a predetermined frequency for publication, if the Product is a fundamental research report, it is the intention of Citigroup Investment Research to provide research coverage of the/those issuer(s) mentioned therein, including in response to news affecting this issuer, subject to applicable quiet periods and capacity constraints. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus.

---

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details.

Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Unless specified to the contrary, within EU Member States, the Product is made available by Citigroup Global Markets Limited, which is regulated by Financial Services Authority. Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citigroup Investment Research's Products can be found at [www.citigroupgeo.com](http://www.citigroupgeo.com). Compensation of equity research analysts is determined by equity research management and Citigroup's senior management and is not linked to specific transactions or recommendations. The Product may have been distributed simultaneously, in multiple formats, to the Firm's worldwide institutional and retail customers. The Product is not to be construed as providing investment services in any jurisdiction where the provision of

such services would be illegal. Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. Advice in the Product has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs.
