Regulatory developments on an even keel

Interconnect Usage Charge (IUC) review and proposed changes in licence fee/spectrum charge structure are two key issues clouding the earnings visibility in the wireless space. In this note, we elaborate these issues and analyze their likely impact on earnings. Contrary to the popular perception, our calculations suggest minimal impact. Bharti stays our top pick in the sector.

Potential termination charge cut: Long way to go, traffic patterns to catch up

TRAI is reviewing the interconnect usage charge (IUC) framework, which could lead to a cut in termination charges (currently at Rs0.3/min). We expect IUC review to be a long drawn process given enormous stakes involved. A recent TRAI note pointed out, "there is no shortcut to this exercise", drawing parallels from such a review undertaken in the past by the British regulator Ofcom, which had lasted for almost two years. A potential cut in termination charges post the review is unlikely to meaningfully impact GSM wireless earnings, in our view. Although lower termination charges would negatively impact operators that have higher proportion of the traffic as in-bound, substitution from fixed line to wireless continues to lift the outgoing traffic, thus narrowing down the incoming-outgoing deficit. The proportion of incoming to outgoing minutes for GSM, although currently >1x, should reach parity within a few quarters.

Wireless spectrum charge hike: Partial licence fee waiver to the rescue

Wireless spectrum charges (levied as percentage of Adjusted Gross Revenue) have been hiked by 100bp for allocations up to 8MHz and 200bp thereafter. If not passed-through, this could hurt EBITDA margin by ~100bp for Bharti and Idea but only ~40bp for RCOM given lower spectrum allocation/requirement in CDMA. However, for the larger incumbents, this shortfall could be more than compensated in FY10 by the partial licence fee waiver - an incentive for deeper coverage. Assuming that full 2% waiver accrues, margin accretion would be 110bp for Bharti, 150bp for Idea, and 50bp for RCOM. Net impact would therefore be neutral to positive for the listed majors.

Bharti remains our top pick

Regulatory developments are unlikely to meaningfully impact earnings. We maintain **Buy** on Bharti which remains our top pick on highest earnings visibility in the current challenging margin environment, low capex intensity, unlevered balance sheet, and relatively better-positioned tower portfolio for potential value accretion. Valuations at 7.3x EV/ EBITDA and 13.2x P/E FY10E are well supported by 25-30% earnings and EBITDA CAGR over FY08-10E. We also find the valuations attractive for RCOM given a significant discount of 25-35% v/s Bharti on EV/EBITDA and ~50% on P/E. We maintain **Buy** on RCOM based on upside to KPIs and market share post GSM scale-up. We believe that RCOM should be beneficiary of easing liquidity while concerns on leverage and margins appear overdone.

COMPARATIVE VALUATIONS (FY10)

| COMPANY | RECO | CMP | TARGET | UPSIDE | MCAP | EV | EPS | P/E | EV/ EBITDA | EV/ | ROE | ROIC |

Potential termination charge cut: Long way to go, traffic patterns to catch up

TRAI is reviewing the interconnect usage charge (IUC) framework, which could lead to a cut in termination charges (currently at Rs0.3/min). We expect IUC review to be a long drawn process given enormous stakes involved. A recent TRAI note pointed out, "there is no shortcut to this exercise", drawing parallels from such a review undertaken in the past by the British regulator Ofcom, which had lasted for almost two years. A potential cut in termination charges post the review is unlikely to meaningfully impact GSM wireless earnings, in our view. Although lower termination charges should negatively impact operators that have higher proportion of the traffic as in-bound, substitution from fixed line to wireless continues to lift the outgoing traffic, thus narrowing down the incoming-outgoing deficit. The proportion of incoming to outgoing minutes for GSM, although currently >1x, should reach parity within few quarters.

What is Interconnect Usage Charge?

Interconnect Usage Charge (IUC) refers to the charges paid by a telecom operator to other operators, mainly for use of their network. The IUC regime currently in effect was established in 2003. Key IUC components include 1) Carriage Charge, 2) Termination Charge, and 3) Access Deficit Charge. Carriage charges are levied by NLD operators for carrying access traffic and are currently under forbearance with a ceiling tariff of Rs0.65/min. Termination charges are levied by the recipient network operator to the operator who originates a call and are meant to compensate for the costs incurred by the recipient operator in a calling-party-pays (CPP) regime. Termination charges have not been revised since 2003 when they were fixed by the regulator at Rs0.3/min. The third component of IUC - Access Deficit Charge - was mainly levied to compensate PSU incumbent (BSNL) for the losses in its unviable rural operations. The regulator has been reducing the ADC charges in a phased manner, which stand reduced to nil from September 2008.

IUC regime change likely to be a long drawn process

While carriage and ADC have been revised from time to time during the past five years of the current IUC regime, termination charges have remained unchanged at Rs0.3/min. TRAI is currently in the process of reviewing termination charges and is likely to issue a consultation paper shortly. However, we expect this process to be a prolonged one given the complexities involved in accessing the cost structure of incumbents and enormous stakes involved.

Despite ~60% decline

~50% higher than the

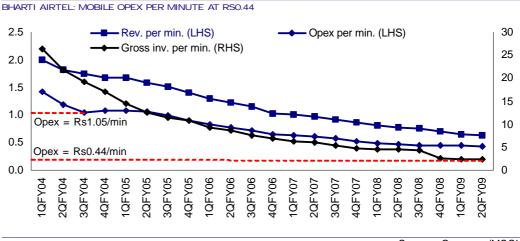

termination charge

over the past four years,

Bharti's current opex/min is

Costs have declined substantially, yet below termination charges

Given the multifold subscriber and traffic expansion over the past five years, there has been a demand for lowering the termination charges based on decline in costs coming from scale benefits. Since 3QFY04, Bharti's mobile traffic has grown by ~25x and the opex/min has declined by ~58% (even without adjusting for the rentals paid to tower segment). However, incumbents continue to believe that even the current termination charges are below cost, and therefore do not see the requirement of revising them downwards.

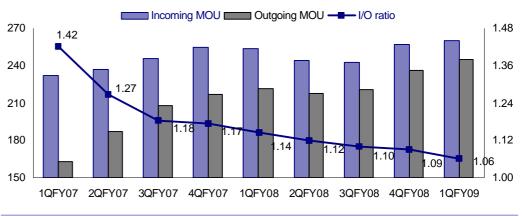

Source: Company/MOSL

GSM Industry I/O ratio continues to decline

TRAI data indicates that incoming to outgoing (I/O) ratio for the GSM industry has been consistently declining over the past several quarters. We believe this reflects continued substitution of originating traffic from fixed line to GSM wireless. Over the next few quarters, the I/O ratio is likley to reach 1.0x. We believe this would make the termination charge cut less relevant for the GSM industry as decline in revenue from incoming would be completely offset by an equivalent reduction in access costs paid for the outgoing calls.

Incoming/Outgoing ratio of the GSM wireless industry continues to decline on fixed traffic substitution. At an I/O ratio of 1.0 (likely in few quarters), there will be no impact of the potential termination charge cut on wireless incumbents GSM INCOMING/OUTGOING RATIO APPROACHING UNITY

Wireless spectrum charge hike: Partial licence fee waiver to the rescue

Wireless spectrum charges (levied as percentage of Adjusted Gross Revenue) have been hiked by 100bp for allocations up to 8MHz and 200bp thereafter. If not passed-through, this could hurt EBITDA margin by ~100bp for Bharti and Idea but only ~40bp for RCOM given lower spectrum allocation/requirement in CDMA. However, for the larger incumbents, this shortfall could be more than compensated in FY10 by the partial licence fee waiver - an incentive for deeper coverage. Assuming that full 2% waiver accrues, margin accretion would be 110bp for Bharti, 150bp for Idea, and 50bp for RCOM. Net impact would therefore be neutral to positive for the listed majors.

Higher spectrum charge from 4QFY09

Wireless operators would be required to pay higher spectrum charges as a percentage of their adjusted gross revenue (AGR) from 4QFY09. The current and revised spectrum charges are outlined in the table below:

| | CURRENT | WEF 4QFY09 |
|--------------------|---------|-----------------------|
| Up to 4.4/2.5* MHz | 2 | 3 |
| Up to 6.2/5* MHz | 3 | 4 |
| Up to 8MHz | 4 | 5 |
| Up to 10MHz | 4 | 6 |
| Up to 12.5MHz | 5 | 7 |
| Up to 15MHz | 6 | 8 |
| Beyond 15MHz | - | 9 |
| * CDMA | | Source: TRAI/DoT/MOSL |

Based on 2QFY09 AGR data, spectrum charge hike would negatively impact EBITDA margin by 40-100bp. Estimated earnings impact is lowest for RCOM at 1.4%, followed by Bharti at 3.5%. Lower impact for RCOM is due to lower spectrum requirement and allocation in CDMA. Earnings impact on Idea is calculated at ~14%, much higher than Bharti and RCOM due to lower net margin and absence of non-wireless revenue. Idea's 2QFY09 net margin had been depressed and is likely to bounce back on lower interest costs post equity infusion at the parent level by Telekom Malaysia International (TMI) and at subsidiary level by Providence. Based on a normalized PBT margin of ~11% (v/s 6.7% in 2QFY09), we calculate earnings impact at ~11%.

SPECTRUM CHARGE (% OF AGR)

| | BHARTI | IDEA | RCOM |
|--|--------|--------|--------|
| Adjusted Gross Revenue (AGR) - Access Business | 60,252 | 18,448 | 22,902 |
| Spectrum Charge (Current) | 2,696 | 984 | 446 |
| As % of AGR | 4.5 | 5.3 | 1.9 |
| Spectrum Charge (likely after increase) | 3,587 | 1,203 | 675 |
| As % of AGR | 6.0 | 6.5 | 2.9 |
| Increase in Spectrum Charge | 891 | 219 | 229 |
| Consolidated Revenue | 90,203 | 22,993 | 56,449 |
| Consolidated PBT | 25,586 | 1,540 | 16,189 |
| Increase as % of Consolidated Revenue | 1.0 | 1.0 | 0.4 |
| Increase as % of PBT | 3.5 | 14.2 | 1.4 |

EBITDA margin impact of 100bp on Bharti and Idea, and 40bp on RCOM

Higher coverage to offset the impact for large incumbents on licence fee waiver

The government has announced an incentive in terms of 2% licence fee waiver to the wireless operators that cover more than 95% of developmental blocks in a non-metro service area. The reduced licence fee would be applicable from FY10. The definition of developmental blocks would be as per the Census of India, 2001. We expect the incumbents be eligible for the waiver in most circles given their deep coverage.

USOF LICENCE FEE: 2% WAIVER ELIGIBILITY

| Percentage coverage of | Applicable USOF | Appli | cable Annual Licer | nce fee | | | |
|-----------------------------|-----------------|----------------------------------|---------------------|--------------|--|--|--|
| total number of development | levy (% of AGR) | inclusive of USOF levy (% of AGR | | | | | |
| blocks in service area | | Category | of service area (ex | cept metros) | | | |
| | | "A" | "B" | "C" | | | |
| Up to 95% | 5% (no change) | 10 | 8 | 6 | | | |
| More than 95% | 3% | 8 | 6 | 4 | | | |
| | | | Sou | rce: DoT/MOS | | | |

Assuming that full 2% waiver accrues for wireless revenue in the non-metro service areas, we estimate earnings accretion of 3.9% for Bharti, 21.9% for Idea, and 1.6% for RCOM. The impact would be highest for Idea given lower net margin and lowest for RCOM led by higher net margin and lower ratio of wireless AGR/consolidated revenues.

| | BHARTI | IDEA | RCOM |
|--|--------|---------|-----------|
| Adjusted Gross Revenue (AGR) - Access Business | 60,252 | 18,448 | 18,448 |
| AGR from Metros (not eligible for the waiver) | 10,376 | 1,547 | 5,293 |
| AGR from Non-metro areas | 49,877 | 16,901 | 13,155 |
| Fee waiver assuming benefit in 100% of territory (2% of AGR) | 998 | 338 | 263 |
| Consolidated Revenue | 90,203 | 22,993 | 56,449 |
| Consolidated PBT | 25,586 | 1,540 | 16,189 |
| Increase as % of Consolidated Revenue | 1.1 | 1.5 | 0.5 |
| Increase as % of PBT | 3.9 | 21.9 | 1.6 |
| | | Source: | TRAI/MOSL |

We expect all wireless majors to be eligible for the 2% waiver in most circles

110bp for Bharti, 150bp for Idea and 50bp for RCOM
