Real Estate

'Tug of war' nearing critical stage

Since the beginning of 2QFY08, developers and buyers of residential property have been engaged in a tug-of-war. While buyers are holding back their purchase decisions due to low affordability and expectations of price correction, developers are unwilling to bring down list prices. This has resulted in significant slowdown in property transactions. In the next 6-12 months, we expect buyers to gain an upper hand. Tight liquidity, weak end-demand at current prices, and aggressive product launches by large pan India players would force the incumbent real estate developers to give in.

Incumbents in residential vertical at a disadvantage

Incumbents in the residential vertical are at a disadvantage. They are already committed to several projects, with varying sales levels. They fear that price reductions in a particular project could (1) have a ripple effect on their other projects within the city, and (2) antagonize existing investors/buyers in the project (leading to cancellations or uncertainty regarding cash flows from pre-sales). We believe that financially strong players such as DLF, which have low exposure to the residential vertical, are at an advantage. They can aggressively price new residential offerings across cities to stimulate pent-up demand.

Developers' reluctance to reduce prices delaying recovery

Most developers are holding on to list prices despite fall in transactions. This has resulted in transactions declining to a trickle and the property cycle coming to a standstill, leading to increased debt, higher inventory and more debtors. Market participants are of the opinion that demand is unlikely to rebound unless real estate prices moderate. The developers' reluctance to lower prices is delaying the process of recovery and also enhancing their risk profile.

Outlook and view

In our last update, we had noted that the 'risk-reward was favorable for long-term investors', as the NAV valuations for real estate companies appeared attractive post the sharp correction. Notwithstanding the recent bounce back, industry fundamentals over the last few months have continued to worsen. While cheap valuations could provide a floor on the downside, in the absence of any fundamental revival in the real estate market, valuations alone cannot continue to be the catalyst. We believe companies which currently have low exposure towards residential vertical such as DLF, HDIL and IBREL are at an advantage compared to companies with large exposure towards residential such as Unitech, Parsvnath, Omaxe, Sobha, etc.

'Tug of war' nearing critical stage

Since the beginning of 2QFY08, developers and buyers of residential property have been engaged in a tug-of-war. While buyers are holding back their purchase decisions due to low affordability and expectations of price correction, developers are unwilling to bring down list prices. This has resulted in significant slowdown in property transactions. In the next 6-12 months, we expect buyers to gain an upper hand. Tight liquidity, weak end-demand at current prices, and aggressive product launches by large pan India players would force the incumbent real estate developers to give in.

Developers are hoping for a recovery in real estate transactions around the festive period (October 2008 – January 2009). Our interactions with property agents suggest that consumers are holding back their purchase decisions and are unlikely to turn buyers unless prices correct meaningfully. We expect price moderation in the residential real estate vertical around 4QFY09. Once prices have corrected, we believe demand would improve, given that the scenario of overall acute housing shortage remains.

Source: Company/Motilal Oswal Securities

Credit tightening to impact demand with a lag, prices to moderate by 4QFY09

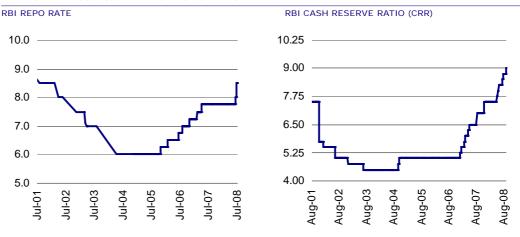

The sharp increase in property prices in the last few years and the recent rise in mortgage rates along with faltering consumer confidence has adversely impacted the affordability factor. As a result, there has been a sharp decline in effective demand. Getting mortgage financing has become difficult, as banks have made the terms of the loans much stricter, lowered the approved percentage of financing, and require more collateral against loans.

The declining internal cash generation for real estate companies has been accompanied by a progressive drying up of funding options. Stringent Reserve Bank of India (RBI)

norms for bank loans to real estate and higher interest rates have made bank borrowings less attractive. Restrictions on external commercial borrowings (ECBs) and classification of preference shares as debt (announced in May 2007) have cut down two other funding sources. Furthermore, foreign direct investment (FDI) norms do not allow real estate investments below a certain size and value. Compounding the effect, the recent fall in equity markets has derailed the plans of many real estate companies to access the domestic or international market for equity issues.

RBI HAS BEEN AGGRESSIVE IN INCREASING RATES

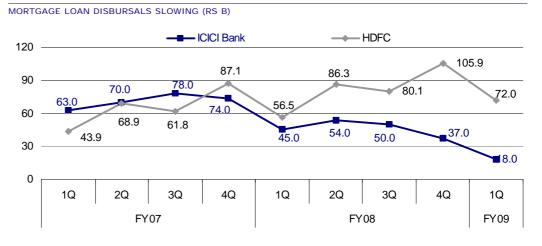

Since April 2008, RBI has increased CRR by 125bp and repo rates by 150bp, signaling higher interest rates to counter inflation

Source: RBI

Demand for RE is inversely related to interest rates; we expect rising interest rates to further impact demand with a lag. Since April 2008, RBI has increased CRR by 125bp and repo rates by 150bp, signaling higher interest rates to counter inflation. Subsequently, banks have increased their lending rates by 50-100bp in 2QFY09.

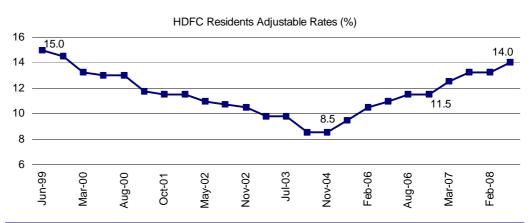

Mortgage loan disbursals registered sharp decline in 1QFY09

MORTGAGE RATES HAVE MOVED UP BY 600BP SINCE NOVEMBER 2004

Mortgate rates have moved up by 600bp since November 2004

Source: HDFC

Unfavorable real estate and financial market conditions have coincided with a sharp increase in the scale and size of projects executed and planned over the past two years. As a result, many builders—mainly small and medium-sized ones—are operationally stretched, besides being financially leveraged. In such a scenario, companies with adverse leverage ratios and significant near-term bullet repayment obligations may be worst hit.

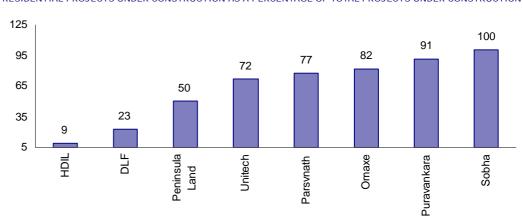

Incumbents in residential vertical at a disadvantage

Over the last several years, the residential vertical has been a sellers' market, with developers enjoying operating margins of 35-75% and negative working capital. Majority of these developers are obsessed with prices. They are unwilling to lower list prices, even though volumes have declined sharply and frequent price increases coupled with rising mortgage rates have negatively impacted affordability levels.

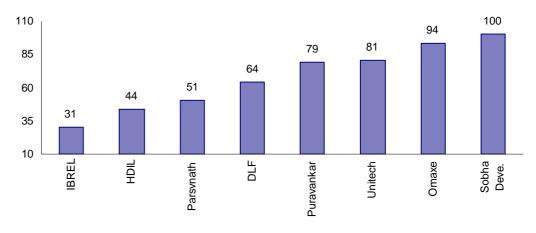

Incumbents in the residential vertical are at a disadvantage. They are already committed to several projects, with varying sales levels. They fear that price reductions in a particular project could (1) have a ripple effect on their other projects within the city, and (2) antagonize existing investors/buyers in the project (leading to cancellations or uncertainty regarding cash flows from pre-sales).

RESIDENTIAL PROJECTS UNDER CONSTRUCTION AS A PERCENTAGE OF TOTAL PROJECTS UNDER CONSTRUCTION

Players like DLF, HDIL currently have low exposure to residential projects in their total area under construction

* as per June presentation

Source: Company/Motilal Oswal Securities

We believe that financially strong players such as DLF, which have low exposure to the residential vertical, are at an advantage. They can aggressively price new residential offerings across cities to stimulate pent-up demand. The success of new entrant, Jaiprakash Associates (JAL) in Noida over the incumbent, Unitech is a case in point.

Jaypee Greens (1,250 acres) v/s Unitech Grande (347 acres), Noida

Unitech Grande's sales adversely impacted post JAL's launch

Unitech Grande is a super premium project, consisting of 8 Signature towers and 4 Gateway towers. The company launched ~450 units at an average rate of Rs7,750/sf (with inaugural discount Rs500/sf) in June 2007. Currently, the base price for the project is maintained at the same rate of Rs7,750/sf (discount of Rs150/sf being offered on booking). Despite the substantial promotion drive undertaken for this project, bookings till date stand at ~220 units over a period of 14 months. Further, Unitech has launched

4 September 2008

two iconic towers at this site – Aqua and Terra in June 2008 at Rs8,000/sf. Of the total offering of 172 units at these two iconic towers, ~20% units have been sold till date. The completion time for all these towers is 40 months.

JAL benefitted at the expense of Unitech

LINITECH/IAVDEE CDEENS NOID

JAL has benefited from the mega promotion drive undertaken by Unitech for Unitech Grande. While Unitech has positioned its project as "super premium" with base pricing at Rs7,750/sf (Rs7,250/sf post inaugural discount Rs500/sf in June 2007), JAL priced its premium residential offering, Imperial at Rs6,100/sf (~20% discount to Unitech). Consequently, while Unitech's project has witnessed little progress on bookings, JAL has managed to sell ~90% of this phase (~1,350 units of 1,400 units launched). JAL has raised prices by 5% to Rs6,400/sf in June 2008. It must be noted that the price increase has been undertaken after selling ~90% of the units launched.

JAL also launched its second offering, Pavillion in April 2008 at lower price points of Rs4,850/sf (golf course facing) and Rs4,550/sf (river facing), targeting the middle income group. The company has sold ~60% at the Pavillion (out of 1,500 units on offer). JAL has raised prices for Pavillion Court to Rs5,100/sf and to Rs5,400/sf for Pavillion Heights. Further, the company is also offering a unique funding scheme for all the non-golf facing apartments (1,000 units, both in Kalypso and Pavillion). Under this scheme, the customer is required to pay only 3% of the total interest cost for the first 30 months; the remaining would be borne by JAL. This scheme is currently on for September 2008 for non-golf facing apartments. Its premium and mid-income offering has enabled JAL to broadbase its customer mix.

JAL has sold 2,126
units till date, since its
launch in November
2007, which is 8x of
what Unitech has
managed to sell since
its launch in June 2007

Developers' reluctance to reduce prices delaying recovery

Most of the developers are holding on to list prices despite fall in transactions. This has resulted in transactions reducing to a trickle and the property cycle coming to a standstill, leading to increased debt, higher inventory and more debtors. We believe that demand is unlikely to rebound, unless prices moderate. Developers' reluctance to lower prices is delaying the process of recovery and also increasing their risk profile. The primary sources of funding for most developers are inflows from pre-sales in the residential vertical and project-wise bank loans. Currently, both the sources are under pressure as: (i) inflows from pre-sales are down due to lower sales and delayed payments, while (ii) bank loans have become both difficult to get and expensive.

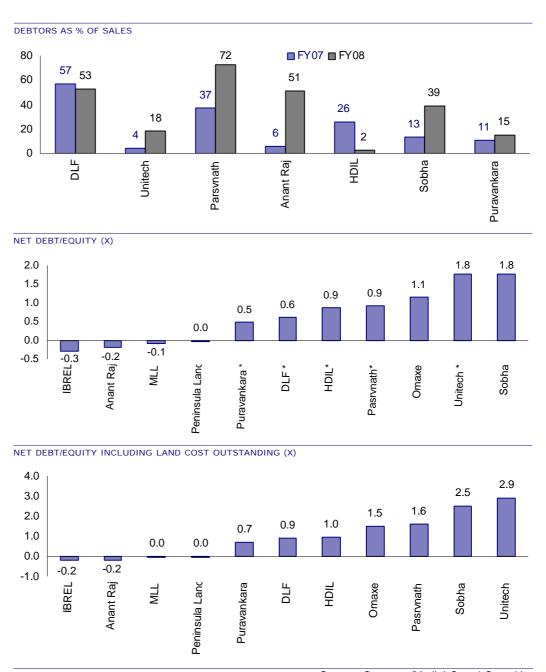

The business model for the residential real estate market in India is likely to witness a significant shift. We expect the negative working capital 'self-financing' or 'pre-sale' model to be under threat as a result of: (1) entry of large organized real estate players, (2) evolved mortgage market, and (3) significant supply pipeline. Recent financing schemes from leading real estate companies such as Unitech, JAL, Ansal etc, wherein pre-EMI interest payments (EMI payments usually begin after the residential unit is completed) are waived for buyers and instead borne by the developer until the project is completed, could increasingly gain traction.

STRAIN ON FINANCIALS VISIBLE

Source: Company/Motilal Oswal Securities

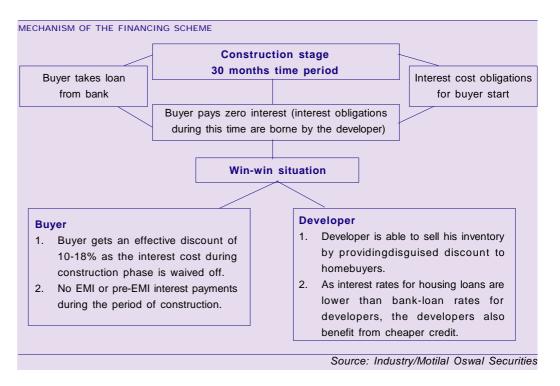

Source: Company/Motilal Oswal Securities

Various measures being adopted by developers to boost sales

Offering various sops and discounts: Most developers are offering various sops and discounts in various disguises often on a case-by-case basis to push transactions. These sops and discounts include waiving of registration, providing free parking area and waiving of floor-rise charges, offering amenities, etc.

Lowering the size of flats: Developers are decreasing the average flat sizes to make them more affordable.

Innovative financing deals: Even large organized developers are offering innovative financing deals to stimulate sales. Examples: Unitech, Puravankara, Ansal, Prasvnath.

DEVELOPERS ARE ADOPTING INNOVATIVE FUNDING SCHEMES TO STIMULATE DEMAND

| DEVELOPER | PROJECT | LOCATION | OTHERS |
|-----------------|----------------|-------------|---|
| Unitech | Uniworld City | Noida | (1) Tie up with HDFC where EMI would begin 30 mths from date of booking. 200apts (of total of |
| | | | 350apts) sold owing to this scheme. (2)Reduced |

| | | | to bear only 3% of the toal interest cost whereas |
| | | | the balance will be borne by Jaypee for 30months |
| | | | |

^{*} The scheme is currently on for September 2008 for non-golf facing apartments

Source: Company/Motilal Oswal Securities

Wave towards mid-income housing

Over the last few months, large real estate players have launched projects classified as affordable housing, mid-income housing or low-income housing. They have priced properties under these projects at 20-25% discount to the prices prevailing in the surrounding areas, and have received encouraging market response. We believe that this trend is more than just product re-classification and signals price corrections. Considering the current slowdown in volumes and stringent financing norms, we also expect the proportion of plots in the development plans of real estate players to increase, as plots offer the advantage of early monetization.

Most real estate companies have the majority of their residential plans focused on apartments, which enjoy high realizations, and very little exposure to plots. However, considering the current slowdown, we believe real estate players may shift focus from apartments to plot developments, as they offer early monetization. However, as plots do not attract lucrative returns like FSI development, the NAVs for real estate companies are expected to plummet, with change in development plans skewed towards plots.

Huge demand exists at the right price points

While the real estate industry is witnessing a volume slowdown, we believe that a huge pent up demand exists for the right product at the right price points. This is evident from the recent stupendous response to DDA's housing scheme in August 2008 where,

- (i) DDA launched a housing scheme (open from 6 August 16 September, 2008) for affordable housing in Delhi, offering ~5,000 apartments. The apartments on offer range from 423sf to 1,700sf and are priced between Rs0.7m/unit to Rs7.7m/unit, an average rate of Rs1,600/sf, significantly lower than prevailing market rates.
- (ii) DDA received a stupendous response to this housing scheme, ~100,000 forms were sold on the first day itself.

Companies have already started eyeing the affordable housing segment and have planned projects targeting this huge market segment.

Targeting the treasure pot at the bottom of the pyramid

While all developers in India keep talking of a huge pent up demand in the Indian RE market at the correct price points or the lower to mid income housing segment, few have taken the initiative to tap the low margin but a very high volume market. Puravankara Projects (PPL) has disclosed its plans to tap the lower mid-income housing segment.

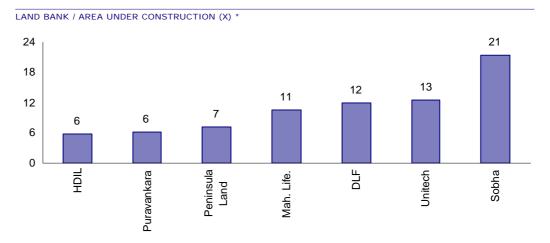

PPL discloses plans to enter social/ lower mid income housing segment: PPL has disclosed plans to enter the social or lower mid income housing segment in India, which promises to be a very high volume market, considering the acute shortage of housing that we have in India. In this regard, PPL is setting up a 100% subsidiary Provident Housing and Infrastructure Limited (PHIL), which in its Phase 1, plans to launch ~65,000 flats at price brackets of Rs1m to Rs2m, comprising of 1-2-3BHK flats. In the phase 1, PHIL would target on three key cities in south, Bangalore, Chennai and Hyderabad, while in phase 2, it would look at replicating its model in several other key cities in India such as Cochin, Pune, Jaipur, Coimbatore, New Delhi, Nagpur, Kolkata, etc.

Volume-value choice: Very few developers in India have taken the initiative to tap the low margin but a very high volume market. This is largely because it would mean moving from a business model which currently enjoys (i) 40-70% operating margins, and (ii) IRR in the range of 50-75% to a business model which would be volume based leveraging on fast turnarounds but enjoying (i) low operating margins in the range of 15-18% and (ii) IRR in the range of 18-22%. In our opinion, PPL's initiative is perhaps an early signal of more such moves by large organized developers in India. Another large RE company that is already working on similar plans is Omaxe.

Developers sitting on 10-15 years land bank: Most of the developers today are sitting on a land bank, which could have a development lifecycle in excess of 10-15 years, unlike

4-5 years in countries like China or 2-3 years in the developed countries. In our opinion, weak RE demand at current price points may force developers to change their development plans to stimulate the huge user market by foraying into lower/mid income housing vertical.

^{*} Typically for most companies area under construction is likely to be completed over 3-5 years

Source: Company/Motilal Oswal Securities

The current area under construction for most companies includes projects which are likely to be completed over the next 3-5 years.

Outlook and view

In our last update, we had noted that the 'risk-reward was favorable for long-term investors', as the NAV valuations for real estate companies appeared attractive post the sharp correction. Notwithstanding the recent bounce back, industry fundamentals over the last few months have continued to worsen. While cheap valuations could provide a floor on the downside, in the absence of any fundamental revival in the real estate market, valuations alone cannot continue to be the catalyst.

In FY08, the focus was on the real estate sector as a 'theme', with all real estate stocks moving in tandem. In FY09, the focus is likely to shift to company-specific within the real estate sector. We expect FY09 to be a year of consolidation, in which the industry leaders would get differentiated from peers. We believe developers with staying power would utilize this consolidation phase to emerge stronger and position themselves in an advantageous manner to capitalize on the growth phase post consolidation. Focus on companies with (1) high visibility on monetization of assets over the next 3-5 years, (2) low leverage and robust financials, and (3) strong execution track record. We believe companies which currently have low exposure towards residential vertical such as DLF, HDIL and IBREL are at an advantage compared to companies with large exposure towards residential such as Unitech, Parsvnath, Omaxe, Sobha etc. Our top picks in the sector are DLF, IBREL in the large caps and Mahindra Lifespaces and Bombay Dyeing in the midcaps.
