### TCS (TCS)

### **Technology**

Delivers—10/10. TCS reported another strong quarter cementing its status as the industry bellwether further. Even as qoq US\$ revenue growth of 7% was a tad lower than our estimate, margin beat (30.2%, 90 bps higher than estimate) and higher-than-expected other income drove a 5.6% beat on net income (Rs23.3 bn versus expected Rs22.1 bn). Demand indicators continue to support our bullish stance. We increase our FY2012/13E EPS estimates to Rs54/62.7 and raise TP to Rs1,350. BUY.

### Premium to Infosys could sustain; reversal of margin convergence trend poses risk

TCS continues to expand its revenue, operating profit and net income leadership over Infosys. 3QFY11 marked the seventh consecutive quarter when TCS has outperformed Infosys on yoy EBITDA and net income growth—quarter net income gap between the two companies is now 31% in favor of TCS versus 18% in favor of Infosys only seven quarters back (March 2009). Even as Infosys has kept pace on revenue growth, TCS has managed to narrow the EBITDA margin gap versus Infosys to ~300 bps from a peak of 830 bps two years back.

More importantly, immediate reversal of this trend on revenues/EBITDA may not happen—we remain positive on strong revenue growth outlook for both the companies and pyramid expansion should serve as a strong margin lever for both in FY2012E. TCS does face an ETR increase headwind in FY2012E but the same is factored into Street estimates. We also note that Infosys has seen a sharp increase in non-manpower expenses post the downturn, which TCS hasn't yet.

### 3QFY11—another strong quarter

TCS delivered a robust Dec 2010 quarter on most parameters—strong qoq revenue growth (+7%, 0.5% lower than estimate), backed by strong volume growth (+5.7%) and marginal pricing uptick, OPM expansion of 20 bps qoq (90 bps higher than estimate) despite pressure from Re appreciation and rent cost normalization, and net income growth of 11% qoq and 30% yoy to Rs23.3 bn, 5.6% above our estimate. More importantly, 3Q results and management commentary provided solid demand indicators—broad-based growth (except Telecom vertical), strong client metrics, robust hiring (20,000+ gross hires for the quarter, strong campus hiring numbers), discretionary spend pick-up trends, deal closures and positive commentary on deal pipeline and pricing outlook.

### Raise estimates and target price; reiterate BUY

We raise our EPS estimates for FY2011/12/13E by 2.3/1.5/1.1% to Rs44.4/54/62.7, respectively. We note that our FY2012E and FY2013E estimates are up despite an increase in ETR assumptions. Estimate increase is driven by modest upward revisions in revenue as well as margin assumptions. We raise our target price on the stock to Rs1,350 (Rs1,250 earlier). Our implied target multiple on TCS is now at a 5% premium to Infosys (10% adjusted for differences in depreciation policy).

### A closer look at the source of surprise—margins

Even as TCS' reported revenues for the quarter were a tad lower than our estimate, the company surprised on net income. The surprise was driven equally by higher-than-expected margins as well as other income. TCS' EBITDA margin for 3QFY11 at 30.2% came in 90 bps ahead of our estimated 29.3%, despite the expected normalization of rent expenses. Surprise came in at both the cost of revenues as well as SG&A level. We take a look at both

- ▶ COR—at the COR level, the sources of surprise were lower-than-expected employee costs and equipment sales. We note that we had expected strong growth in lower-margin domestic SI revenues, which was not the case, aiding margin surprise. Employee costs line item movement is a tad surprising—up just 2.5% qoq against a revenue growth of 4.1% in Re terms. We also note that overall employee base growth of 7.2% qoq was higher than volume growth (essentially utilization, including trainees, was down) and employee pyramid was flat. We believe hiring/attrition skew worked in favor of the company.
- ▶ SG&A—at the SG&A level, bulk of the positive variance came in from the bad debt provision line item. TCS reported a reversal of Rs331 mn (positive impact of 30 bps on margins) versus our expectation of a charge of Rs400 mn (40 bps)—a swing of 70 bps. Exhibit 3 depicts quarterly bad debt provision for TCS for the past several quarters.

### Other key highlights from the earnings report and management commentary

- Revenue growth was broad-based except the Telecom vertical (expected to remain weak for another quarter or two) and India/ LatAm geographies. Growth was particularly strong in the Hi-Tech (+16% qoq), Media (+23% qoq), Transportation (+14% qoq), BFSI (+8.4% qoq) and Retail (+7% qoq) verticals. Among geographies, even as US was robust (+6.6% qoq), non-US geographies fared much better with Europe and EMEA/Asia-Pac (ex-India) growing double-digit+ sequentially. Consulting (+17% qoq), Infra (+20% qoq), Products (+26% qoq) and BPO (+12% qoq) led among the service lines, even as ADM segment reported a modest 3% qoq growth.
- ▶ Management indicated timely closure of clients' IT budgets—flat to up with a shift towards discretionary spends and off-shoring.
- ▶ Company indicated a campus hiring target of 37,000 for the ongoing campus placement season; the company has made 23,700 offers so far and expects its campus hiring to be complete by mid-Feb 2011.
- ▶ Employee pyramid remains a key margin lever moving into FY2012E; employees with <3 years of experience now form 39% of the total base versus a historical peak of 52%.
- ▶ Attrition trended down sequentially to 17.1% (from 20.3% in 2QFY11) on a quarterly annualized basis.
- ▶ # of US\$100 mn clients increase by 1 (to 9 from 8) and # of US\$20 mn clients increase by 10 (to 76 from 66) on an LTM basis.
- ▶ The company indicated a positive pricing outlook and is seeing upticks in select renegotiations of existing contracts and most new deal signings.

### Larsen & Toubro (LT)

### Industrials

### Strong execution, would watch for margin recovery and order inflow pick-up.

Strong 3QFY11 revenue growth of 40.5% is likely led by power and infrastructure segments. We believe margins may recover partially as the 160 bps decline may have been led by the execution of several projects which had not yet reached threshold level. Full-year inflow guidance of 25% maintained though with caveats of slippage in FY2012E. We retain ADD for now and would watch for margin recovery and order inflow traction picking up.

### Strong revenue growth on execution pick-up likely led by power and infrastructure

L&T reported very strong revenue growth of 40.5% yoy to Rs114 bn in 3QFY11, about 12% higher than our estimate of Rs101.7 bn led by a pick-up in execution of the strong backlog. The strong revenue growth is likely to be led by the power and infrastructure segments. Lower-than-expected margin (10.8% versus estimate of 12.3%) led to in line PAT of Rs8.05 bn, up 15.6% yoy.

### Margin decline attributed to several projects not yet reaching threshold and higher material costs

The 160 bps yoy EBITDA margin decline was primarily attributed to (1) some orders for which execution has started recently but have not entered the margin recognition phase and (2) increase in raw material costs (about 1/3rd backlog comprises of fixed price orders). We believe the power segment is likely to have contributed to more than 30% of 3QFY11 revenues. Assuming about 30% of this revenue line is from orders that have not achieved the margin recognition threshold that would contribute a difference of 200-250 bps at the contribution-margin level. Note that contribution margins have declined by 340 bps on a yoy basis.

### Deferrals lead to sedate inflows in 3Q; maintains FY2011E guidance, with several caveats though

L&T management cited changes in ordering patterns for several projects leading to the lower-than-expected inflows in 3QFY11 (reported inflows of Rs113 bn – down 25% yoy). L&T management has maintained its full-year order inflow guidance growth of 25% yoy for FY2011E, however, with several caveats as orders may slip into FY2012E. The management has cited a majority of the expected orders are likely to be booked in the month of March 2012. We estimate order inflows of about Rs790 bn (up 14% yoy) for the full-year FY2011E.

### Marginal changes and retain ADD as we watch for margins and order inflow traction recovery

We retain our ADD rating with a revised TP of Rs2,050 (from Rs2,125) based on (1) recent sharp correction, (2) incrementally positive on strong execution, (3) legible explanation on lower margins in 3QFY11, (4) lower-than-expected order inflows likely to be already factored in and (5) relatively reasonable valuations of 16-17X FY2012E standalone earnings. We marginally revise our consolidated estimates to Rs74.9 and Rs86 for FY2011E and FY2012E, respectively, from Rs76.3 and Rs87.6.

### Strong revenue growth likely led by power and infrastructure segments

L&T reported very strong revenue growth of 40.5% yoy to Rs114 bn in 3QFY11, about 12% higher than our estimate of Rs101.7 bn. This is likely a reflection of a pick-up in execution of the strong order backlog of the company. The company cited that several projects which were won in the second half of FY2010 moved from the initial engineering phase to the procurement and construction phase leading to the strong revenue growth for the quarter.

## Margin declines on increase in material costs and several orders not reaching margin recognition threshold levels

The strong revenue growth was, however, partially offset by lower-than-expected EBITDA margin. L&T reported EBITDA margin of 10.8% in 3QFY11, about 160 bps down on a yoy basis led by lower contribution margins. We had expected margins to remain broadly flat on a yoy basis. Operating leverage has partially cushioned the margin decline, as contribution margins have declined sharply on a yoy basis by 340 bps. The lower-than-expected EBITDA margin led to a reported EBITDA of Rs12.4 bn - inline with our estimates.

The yoy margin decline was primarily attributed to (1) increase in raw material costs – about 1/3rd of L&T's order backlog comprises of fixed priced orders and (2) some orders for which execution has started recently but have not entered the margin recognition phase. We believe that power itself may have contributed more than 30% to the revenues in this quarter. If 30% of this revenue line is from orders that have not achieved the margin recognition threshold, then that would contribute a difference of 200-250 bps at contribution level.

L&T reported a PAT (before extraordinary items) of Rs8.05 bn, in line with our estimates and up 15.6% yoy from Rs6.96 bn. For the nine months ending December 31, 2010, the company has reported revenues of Rs286 bn, up 22% yoy. EBITDA margin of 11.4% was flat on a yoy basis leading to a net PAT growth of 18.5% to Rs21.7 bn in 9MFY11 versus Rs18.3 bn in 9MFY10.

# Strong revenue growth led by core E&C segment; product segments report relatively sedate quarter

Revenue growth in 3QFY11 was primarily led by the core E&C segment which recorded 42% yoy revenue growth. The product segments of L&T reported relatively weak results likely reflecting relatively slow pick-up in domestic capex activity. Machinery and Industrial products segment has reported a sedate growth of 15% for the quarter while Electrical and Electronics segment reported only a 10% growth on a yoy basis.

### Revenue pick-up likely to be led by power and infrastructure

L&T's strong revenue growth in 3QFY11 (up 40.5%) yoy is likely to be led by (1) power segment – start of execution of several BTG orders and (2) infrastructure segment – pick-up in execution of infrastructure orders under construction. Power segment is likely to have contributed to about 32% of the total sales of L&T in 3QFY11 – this is versus about 21% of total sales in FY2010 and 1HFY11.

Industrials Larsen & Toubro

### Rough segmental break-up of L&T's revenues, FY2010, 1HFY11 and 3QFY11

Source: Company, Kotak Institutional Equities estimates

### Maintains guidance of 25% inflow growth - we build inflow growth of 14%

L&T management has maintained its full-year order inflow guidance growth of 25% yoy for FY2011E. This implies an order inflow requirement of about Rs375 bn in 4QFY11E (reported order inflows of about Rs495 bn in 9MFY11). The management has cited that a majority of the expected orders are likely to be booked in the month of March 2012. We believe that several of these orders may slip into FY2012E. We estimate order inflows of about Rs790 bn (about 14% yoy growth) for the full-year FY2011E implying an order inflow requirement of Rs297 bn in 4QFY11E.

## Requires Rs297 bn of order inflows in 4QFY11E to meet our full-year estimates Rough break up of sector-wise order inflows of L&T, March fiscal year-ends, 2008-13E

### Deferment of order inflows leads to lower-than-expected inflows

L&T management cited changes in ordering patterns for several projects leading to the lower-than-expected inflows in 3QFY11 (reported inflows of Rs113 bn – down 25% yoy) such as (1) organization inertia, (2) delays in gas/coal allocations, land acquisition, environmental clearances etc., (3) splitting up of large EPC projects in smaller components, (4) scam and corruption related issues, (5) political issues etc. We believe some of these reasons may also impact future execution of the company.

### Underlying reasons for sedate inflows may slow execution as well

Potential reasons for slower-than-expected order inflow activity

S No.	Reason	Details
1	Organizational inertia	Delays in ordering activity from several companies such as NTPC bulk tender
2	Delays in allocation of coal blocks	Has led to delays in award of EPC/equipment orders for several power projects
3	Delays in gas allocation from K.G.Basin	Adversely impacted orders from fertilizer, pipeline and power segments
4	Land acquisition issues	Land acquisition issues in several projects led to delays in award activity
		Land acquisition, environmental clearance etc. is now sequentially processed versus parallely
5	Sequential versus parallel processing	earlier
		GSPC (which had placed a large Rs5 bn order in 2Q) is now splitting up its orders into several
6	Split-up of large EPC projects	parts such as process platform etc.
		Has significantly impacted the roads segment; ordering activity considerably slow in recent
7	Scam and corruption issues	months versus strong traction in 2HFY10 and 1QFY11
-		Several issues such as political unrest in AP, elections in Tamil Nadu till April-10, assembly
8	Political reasons	elections in West Bengal led to delays in several orders
		From the next round of bidding; PGCIL has possibly not decided on closed tenders for the
9	Fragmentation of vendors by PGCIL	past nine months

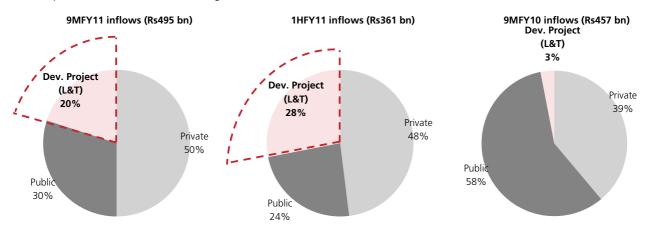

Source: Company, Kotak Institutional Equities

## No contribution of in-house projects to Rs133 bn of inflows in 3QFY11 may be positive

In-house development projects did not contribute to the total Rs133 bn of order inflows in 3QFY11 versus a contribution of about 28% in 1HFY11.

### No contribution of in-house projects to Rs133 bn of inflows in 3QFY11

Sectoral break-up of L&T's order inflows and backlog

Source: Company, Kotak Institutional Equities

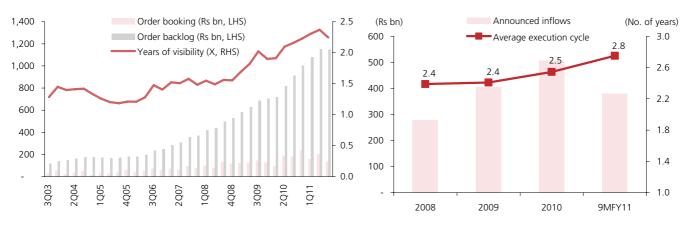

### Rise in average execution cycle matched by increasing visibility

Our tracking suggests that average execution time of inflows has gone up to 2.8 years in 9MFY11 from 2.4 in FY2008. However, this is more than matched up by increasing visibility. The order backlog visibility has increased from an average of about 1.5 years (on forward four quarter revenues) in FY2008 to about 2.3 years at end-9MFY11.

Industrials Larsen & Toubro

Note that our study is based on estimated execution periods for order announcements of L&T over FY2008-9MFY11.

Source: Company, Kotak Institutional Equities estimates

### Steep competition witnessed in Hydrocarbons segment

Order inflows hydrocarbon segment remained weak in this quarter (contributed to 6% of inflows in 9MFY11 versus 17% in 9MFY10). Management cited very steep competition in this segment leading to loss of several orders (witnessed price difference of an average of 25% between L&T's bid and the winning bid).

### Balance sheet remains strong with no deterioration in working capital

L&T reported a strong balance sheet at end-9MFY11 with no deterioration in working capital levels (remained at about 7.5% of sales versus end-FY2010 levels) and gross debt to equity of 0.37X. L&T increased its investments in its subsidiaries and associates (in the form of equity investments, ICDs, loans & advances) by Rs24 bn to Rs100.9 bn at end-9MFY11 from FY2010-end level of Rs77 bn. This was primarily led by (1) buy-out of PE stake in L&T IDPL for Rs7.1 bn (increased stake to 97.5%), (2) increase in investment in L&T Finance and L&T Infra. Finance by Rs4.7 bn and (3) increase in investment in L&T Power Development to the tune of about Rs4.6 bn.

Larsen & Toubro Industrials

# L&T IDPL buyback of 13.2% stake for Rs7.1 bn implies value of Rs54 bn; but does not include all projects

L&T recently completed a buyback of about 13.2% stake in L&T IDPL from private equity investors for a value of Rs7.1 bn. This implies a value of Rs54 bn for 100% of L&T IDPL. This value for IDPL is likely to not include several development projects (such as Hyderabad metro project, Gujarat road projects etc.) which are presently not within L&T IDPL. We currently value all the infrastructure SPVs of L&T (IDPL + other development projects) at Rs85 bn.

### Retain ADD as we watch for margins and order inflow traction recovery

We retain our ADD rating with a revised target price of Rs2,050 based on (1) recent sharp correction provides about 18% upside to our target price (stock has corrected by about 15% on an absolute basis and 10% relative to SENSEX in the past month), (2) incrementally positive on strong execution, (3) legible explanation on lower margins in 3QFY11, (4) lower-than-expected order inflows likely to be already factored into the price and (5) relatively reasonable valuations of 16-17X FY2012E standalone earnings.

We have marginally revised our standalone earnings estimates to Rs63.6 and Rs73.7 from Rs65.1 and Rs75.3 for FY2011E and FY2012E, respectively. Our earnings revisions are based on marginally lower order inflow and EBITDA margin assumptions for FY2011E and FY2012E. We have correspondingly revised our estimates for the consolidated entity to Rs74.9 and Rs86 from Rs76.3 and Rs87.6 for FY2011E and FY2012E, respectively.

Source: Company, Kotak Institutional Equities estimates

We revise our SOTP-based target price to Rs2,050/share (from Rs2,125/share earlier) comprised of (1) Rs1,647/share from the core construction business based on 21X FY2012E expected earnings, (2) Rs238/share from L&T's service subsidiaries, (3) Rs76/share from the manufacturing subsidiaries, (4) Rs119/share from the infrastructure SPVs and (5) Rs94/share from other subsidiaries and investments. The target price revision is primarily due to increased value from the finance subsidiaries (L&T Finance, L&T Infra Finance) as additional capital would aid growth and reduce pressure on the parent's balance sheet.

Industrials Larsen & Toubro

### Axis Bank (AXSB)

### Banks/Financial Institutions

Delivers a perfect quarter; upgrade to BUY. Amidst a lot of perceived concerns on margins and asset quality, Axis Bank has delivered a perfect quarter—margins are up by 13 bps qoq and net NPLs are down 5 bps qoq. The management reiterated their positive outlook on asset quality, but expect margins to decline from 3Q levels. Valuations have corrected sharply recently and the stock now trades at 2.3X PBR and 12X PER on FY2012E earnings. We upgrade our rating to BUY (from ADD) post this price correction with a TP of ₹1,600.

### Concern exaggerated; recent price correction offers a strong upside; upgrade to BUY

Axis Bank's results have allayed a lot of concerns prevailing about margin trends and asset quality. Margins have increased by 13 bps during the quarter, benefiting from higher CASA ratio and a reasonable pricing power. Asset quality has improved with quarterly run rate on slippages declining by 25% qoq. While we build margin compression in 4QFY11E and FY2012E due to rising deposit costs, we reiterate our view that banks with high CASA will be able to manage margins much better than other financial entities. Outlook on asset quality is positive and we expect similar trend in future quarters as well. We maintain our positive view on the stock, on the backdrop of a strong economic growth. Post the recent correction of 18% over past 3 months, valuations have become very attractive. We upgrade our rating to BUY with a target price of ₹1,600 (30% upside).

We increase our earnings estimates marginally by 4% in FY2011E and largely maintain it for FY2012E and FY2013E. We build in a margin compression of 10 bps in FY2012E over FY2011E. We also reduce our loan growth marginally to 22%, on a somewhat higher loan growth in FY2011E.

### Loan growth ahead of industry; focus remains on large corporate segment

Sequential loan book growth was at 12% to ₹1,235 bn (46% yoy) but YTD loan growth is higher than industry at 18.4%. Focus continues to remain on the large corporate segment which grew by 70% yoy to ₹637 bn. Infrastructure and finance sectors saw healthy growth while disbursements for working capital has increased in the current quarter. Retail loans (20% of loans) grew by 33% yoy driven mainly by housing (26% yoy growth) and personal loans (short-term application money of ₹25 bn for housing). SME loans were flat during the quarter but agriculture loans grew 19% qoq (seasonal trend). We see limited concern on the ability of the bank to grow loans at 1.3X system growth and we build a 25% CAGR for FY2010-13E. Deposits increased by 37% yoy (flat qoq) to ₹1,558 bn. CASA deposit growth remained strong (savings deposit grew 32% yoy). CASA proportion to total deposits improved by 80 bps qoq to 42.3%.

### BUY

### **JANUARY 17, 2011**

### RESULT, CHANGE IN RECO.

Coverage view: Attractive

Price (Rs): 1,229

Target price (Rs): 1,600

BSE-30: 18,882

### **QUICK NUMBERS**

- NII growth at 29% yoy while loan growth at 46% yoy
- NIMs expand 13 bps qoq to 3.8%
- Asset quality stable with lower slippages
- Upgrade to BUY with TP of ₹1,600

### NIMs improve 13 bps qoq, above expectations

Axis Bank's net interest margin (NIM) was 3.8% in 3QFY11—13 bps improvement qoq and better than our expectations as cost of funds and asset yields were nearly flat for the quarter and CD ratio (average) for the quarter improved by about 100 bps (closing CD ratio expanded to 79% as compared to 71% in the previous quarter). Funding costs were flat qoq at 4.8%. NII grew 29% yoy, 5% ahead of our expectations to ₹16.2 bn. We are building NIMs to decline in 4QFY11E by about 20 bps and FY2012E by 10 bps as expansion in CD ratio from current levels is unlikely and funding costs have increased sharply in recent times. However, we highlight that the previous rate hike of 50 bps in December is yet to reflect fully in margins. Further the bank has taken a further rate hike of 25 bps in January 2011. Overall, we maintain our view that a tight liquidity environment would benefit banks given their pricing power and Axis Bank can leverage it better through its higher share of CASA deposits.

### Reported asset quality trending better; slippages decline to 1.2% for the quarter

Axis Bank reported slippages at 1.2% (annualized), lower than 1.6% reported in 1HFY11. Upgradations and recoveries remained flat qoq and the bank reported lower write-offs during the quarter (₹870 mn compared to ₹2.9 bn in 2QFY11). The management mentioned that exposure to microfinance is less than 1% of overall loans. Gross NPLs were at ₹14.8 bn (1.1% of loans) while net NPLs were at ₹3.9 bn (0.3% of loans) compared to ₹13.6 bn and ₹4.1 bn in the previous quarter. Loan loss provisions for the quarter were at 0.8% (annualized) compared to 1.2% in 1HFY11. We are building loan loss provisions at 1.0% for FY2011E and 0.9% for FY2012E.

### Other highlights

- ▶ Growth in fee income was slower than overall loan growth at 21% yoy and was driven mainly by the large corporate segment (36% yoy) and retail banking (21% yoy). Fee income from business banking, capital markets and agri/SME banking continues to remain under pressure. Treasury profits were at ₹1.3 bn compared to ₹1.1 bn in 2QFY11 and mainly from fixed income portfolio.
- ▶ There was a net write-back of ₹146 mn, largely from the overseas investment book, even as the bank made provisions for domestic G-Sec book.
- ▶ Capital adequacy ratio stands comfortable at 12.5% with tier-1 ratio at 10.2%.
- ▶ Cost-income ratio declined by 145 bps qoq to 42% mainly due to lower employee costs. The bank opened another 17 branches and 457 ATMs, taking the total branch network to 1,120 and ATMs to 5,303. Management highlighted that they are likely to open over 200 branches during the current fiscal. We have maintained our cost-income ratio at about 42% levels.

### PFC (POWF)

### Banks/Financial Institutions

Strong growth; headwinds for NIM. PFC reported 3QFY11 PAT of Rs6.58 bn, up 17% yoy and 4% below estimates. Strong loan growth (27%) and stable NIM underpinned core growth. We expect loan growth to remain strong as power generation capex typically picks up by the end of the (5-year) Plan. Higher borrowing rates will likely put pressure on spreads. We find downside risks on our margins estimate in the current environment, and would await better price points despite the recent correction. Retain REDUCE with price target of Rs300 (Rs325 earlier).

### Loan growth strong at 27%

PFC reported 27% loan growth on the back of 20% growth in disbursements during 3QFY11. We are modeling 27% loan growth for PFC in FY2011E and FY2012E; we expect loan growth to moderate to about 22% in FY2013E and are revising our estimates accordingly.

We would like to highlight that PFC's loan growth picked up in the recent past (29% in 1QFY11, 28% in 2QFY11) as compared to 22% CAGR between FY2007 and FY2010.

**High capex in generation segment.** Capex in the generation segment typically picks up towards the end of the 5-year Plan thereby driving higher growth for PFC. Notably, generation has been a major growth driver, responsible for 65% of the disbursements and 89% of the loan growth between April and December 2010.

**Visibility on loan pipeline remains strong**. PFC has outstanding (undisbursed) approvals of Rs1.7 tn from which it has already executed documents for proposals of Rs1 tn (i.e. 1.1X current loan book).

**Private sector playing bigger role.** The share of private sector will clearly increase over time—about 23% of its outstanding approvals are driven by private players as compared to 7% share in the current loan book and 14% of disbursements over the past nine months.

### Margins stable qoq; may face headwinds

PFC reported NIM of 4.1% on the back of 2.7% spreads—stable for the past three quarters. Borrowing cost declined by 10 bps gog due to higher share of forex and short-term loans.

- ▶ PFC raised forex loans equivalent to Rs10 bn in September 2010; the full impact of these loans was visible during 3QFY11.
- ▶ Short-term borrowings accounted for about 25% of increase in borrowings during the quarter.
- ▶ PFC raised lending rates in September 2010 in order to pass on higher borrowings costs, despite which asset yields declined by 8 bps qoq.

### **REDUCE**

### **JANUARY 17, 2011**

#### RESULT

Coverage view: Attractive

Price (Rs): 273

Target price (Rs): 300

BSE-30: 18,882

### **QUICK NUMBERS**

- PAT up 17% yoy and 4% below estimates
- Loan growth strong at 27%

Nischint Chawathe nischint.chawathe@kotak.com Mumbai: +91-22-6634-1545

Manish Karwa manish.karwa@kotak.com Mumbai: +91-22-6634-1350

Kotak Institutional Equities Research kotak.research@kotak.com Mumbai: +91-22-6634-1100

- ▶ We expect margins to remain under pressure over the next few quarters and are tweaking down our margin estimates. In 4QFY11E, about Rs47 bn of assets and Rs200 bn of liabilities will be re-priced at a higher rate (in the current interest rate regime). Since the liabilities due for re-pricing are significantly higher than assets due for re-pricing, margins will likely be under pressure unless PFC increases its benchmark rates sharply.
- ▶ In FY2012E, about Rs280 bn of assets will be due for re-pricing. Management has highlighted that the outstanding yield on these loans is almost equal to the current market rates. Hence, we are not sure if the large base of assets due for re-pricing in FY2012E will provide a buffer to margins.

### Significant impact of standard asset provisioning norms, if applicable to PFC

RBI has prescribed provisioning requirements of 0.25% on all standard assets of NBFCs. It is not clear if this will be applicable to PFC (and REC) as the current NBFC guidelines are not applicable to Government-owned NBFCs. PFC has been growing at a fast pace but has made negligible provisions in the past. As such, nominal standard asset provisions may be prudential. If the guideline is applicable, PFC will likely need to make provisions of Rs2.5 bn, which is equivalent to 33% of 4QFY11E PBT.

### Strategy

India

Hang in there; second half will likely be better. We have made a few minor changes to our Model Portfolio to take advantage of severe volatility in stock prices and large correction in certain high quality stocks. We continue to be overweight banking, metals and technology sectors—(1) banking in light of inexpensive valuations and NIMs likely surprising on the upside compared to Street expectations and (2) metals and technology given their exposure to global economic recovery. We continue to avoid infrastructure owners, high-debt companies and domestic consumption companies with low pricing power. Our BSE-30 Index fair valuation based on FY2012E and FY2013E estimates remains 21,000 (6-9 months target) and 24,000 (15-18 months target).

### Tweaking the portfolio a bit

We have increased the weight on private banks (HDFC Bank and ICICI Bank) to take advantage of the recent correction in their stock prices and reduced weight on HDFC and some infrastructure and utilities stocks (already quite underweight) and Grasim (strong outperformance over the past few months). We continue to be overweight on PSU banks. We believe that banks have strong pricing power in the current tight-liquidity environment and banks with high CASA will be able to defend their NIMs; we also note that CASA as a proportion of total incremental deposits has gone up significantly in the past six quarters for the banking system. Among other major changes, we have included Wipro in place of GAIL and ICICI Bank instead of Jaiprakash Industries (admittedly a big disappointment) in the Top-10 List.

### 2HCY11E—earnings, government action, crude oil prices key triggers for the Indian market

We currently model 21% earnings growth for FY2012E for the BSE-30 but see downside risks to earnings of several sectors, particularly sectors with (1) high exposure to global commodities as inputs such as automobiles, consumers and energy and (2) high debt such as infrastructure (owners), real estate, telecom and utilities. We are underweight all these sectors. We rule out meaningful government action without lower inflation, which in turn would depend on softer commodity (particularly crude oil) prices. We see inflation turning more benign over the next few months (more due to base effects than price declines) and crude prices declining from current high levels; large QE2-led speculation has pushed up commodity prices well above fundamental levels, in our view.

### 1HCY11E—budget may be key but unlikely to be a big event

Current high inflation, an inflamed political environment and the government's weak fiscal position may preclude any radical policy changes in the FY2012 Union Budget. The government's resolve, if any, to tackle burgeoning fertilizer, food and fuel subsidies may be a good indicator of its attitude towards fiscal consolidation; the latter will be construed positively by the market. Reduction of taxes on crude (import duty) and diesel and gasoline (excise duty) may reduce the under-recoveries on selling fuels at a discount to global prices but also lead to lower tax revenues.

### Revised portfolio slightly but basic theme remains the same

**Exhibit 1 gives our revised Model Portfolio.** Our last changes were on November 16, 2010 when we had over-weighted metals and cut positions in infrastructure and utilities sectors. We have been overweight on the banking and technology sectors for the past 15 months. Our basic thesis is unchanged but we have made a few changes to our Model Portfolio to take advantage of the recent correction in stock prices of certain high quality stocks and divergent movement in some others.

We recommend large overweight positions in banking, metals and technology sectors Kotak Institutional Equities Model Portfolio

#### Notes:

(a) Weights are with respect to January 17, 2011 prices.

- ▶ We avoid stocks that have downside risks to earnings from high input costs (automobiles), high interest rates (infrastructure owners, real estate and utilities), limited pricing power accompanied by expensive valuations (certain consumer stocks) and companies with poor corporate governance (the lesser said, the better); this approach precludes a large section of the investible universe currently.
- ▶ We focus on stocks that will benefit from ongoing global economic recovery (metals, technology) or have pricing power (banks and few select stocks).
- Among the key changes to our Model Portfolio, we have increased weight on private banks such as HDFC Bank and ICICI Bank at the expense of certain stocks in the banking sector (HDFC), cement (Grasim), infrastructure and utilities sectors. We were already quite underweight the latter two sectors in our portfolio. Among other changes, we have replaced (1) GAIL with Wipro on increasing concerns about lower-than-expected gas transmission volumes from lower-than-expected gas production from RIL's KG D-6 block and (2) Jaiprakash Associates with ICICI Bank. Exhibit 2 is our revised Top-10 List.

### We include ICICI Bank and Wipro in Top-10

### Earnings—risks have increased from continued high inflation, interest rates

Our portfolio reflects our concerns about earnings for several sectors. We currently model 22.7% and 20.9% net profit growth for the BSE-30 Index for FY2011E and FY2012E (translating into unadjusted 'EPS' of ₹1,100 and ₹1,331 and adjusted (free-float basis) 'EPS' of ₹1,041 and ₹1,258). Exhibit 3 gives the earnings growth broken down by sectors for the BSE-30 Index and their corresponding valuation parameters.

### BSE-30 Index is trading at 17.2X FY2011E and 14.2X FY2012E basis

Valuation summary of BSE-30 sectors, March fiscal year-ends, 2010-2012E

Source: BSE, Kotak Institutional Equities estimates

We discuss earnings drivers and risks for a few sectors (1) where our views on earnings may differ from consensus such as banking (positive versus Street view) and consumer (negative versus Street view) and (2) whose earnings are relevant for the market (energy and metals) but can be quite volatile depending on global and domestic issues. Exhibit 4 gives the breakdown of net profits and incremental net profits by sectors for the BSE-30 Index.

Scope for upside surprises may be limited in FY2012E given our 21% earnings growth forecast Break-up of earnings of BSE-30 Index across sectors, March fiscal year-ends, 2008-12E

▶ Banking. We expect banks' NIMs to hold up quite well given their strong pricing power in a tight-liquidity environment and their high CASA deposits. (1) We note that banks have raised lending rates (see Exhibit 5) to match the increase in deposit rates (see Exhibit 6) over the past few months. We would clarify that revised deposit rates apply to new deposits only while revised lending rates apply to the entire lending book. Thus, there need not be a one-to-one correspondence in changes in deposit and lending rates. (2) Banks' CASA deposits have increased significantly over the past six quarters; rates on CASA (SA rate is unchanged at 3.5% for the past several years; CA is anyway at 0%) will not move up to the same extent as fixed deposits' rates. Exhibit 7 shows that CASA deposits have contributed to 57% of the increase in total deposits of the banks under our coverage over the past six quarters. Thus, we are not overly perturbed by the increase in interest rates even though we expect credit growth to slow down from the scorching 24% currently and current tight liquidity conditions to ease once government expenditure increases over the next few weeks.

# Banks have been proactively increasing lending rates PLR and base rate by banks

- ▶ Consumers. We see earnings pressures from (1) high raw material costs and pressure on profitability given limited pricing power in some cases (HUL, Jyothy, Marico and Tata Global Beverages), (2) higher spending on food given high food inflation for the urban poor that may lead to some amount of down-trading in consumer products; the urban poor segments accounts for about 25% of the total consumption of consumer staples and (3) increased competition from MNC players in the more profitable segments (personal products) and diversification of Indian players into new segments. Also, we do not see the sector offering its historical defensive characteristics at 24.8X FY2012E earnings (average for KIE coverage universe) and in light of potential downside risks to earnings.
- Energy. We see downside risks to earnings of RIL from lower-than-expected gas production. Our FY2012E EPS will decline by 7.6% to ₹67 if gas production from KG D-6 block is 52 mcm/d versus 70 mcm/d assumed by us currently. Also, in case income tax exemption is not available on gas production, our FY2012E EPS will decline by 8.8% to ₹66. We see limited scope for positive earnings surprises for the chemical and refining segments since we model very strong chemical margins and US\$9.3/bbl refining margin for FY2012E (compared to US\$7.7/bbl in 1HFY11) and US\$8.2/bbl in FY2011E.

In the case of ONGC, we see downside risks from higher-than-expected subsidy burden. Our base-case earnings scenario assumes US\$85/bbl (Dated Brent) crude price for FY2012E and diesel deregulation from October 1, 2012, which results in a net realized price of US\$62.3/bbl for crude oil for FY2012E versus US\$55.7/bbl in 1HFY11. We note that oil companies would need to increase diesel prices by ₹3.8/liter (quite manageable given the current average selling price is ₹40/liter in the four major metros) to earn reasonable marketing margins at US\$85/bbl crude oil price. ONGC's FY2012E EPS could decline to ₹119, if we assume US\$56/bbl net crude oil price realization. We note that ONGC had reported an EPS of ₹93 in FY2009 when gross under-recoveries had gone up to ₹1.06 tn compared to our estimated ₹656 bn for FY2012E. The government has deregulated APM gas price since then, which has added about ₹20 to ONGC's earnings on a full-year basis.

We would clarify that ONGC also benefits from higher crude oil prices although its net realization will be stable at US\$54-57/bbl range if the government does not change domestic selling prices of diesel, kerosene and LPG in FY2012E and crude prices stay in the range of US\$90-100/bbl. This scenario, of course, assumes that the upstream companies will bear one-third of gross under-recoveries.

▶ Metals. This is one of the few sectors where we see upside risks to our earnings estimates currently. Exhibit 8 shows that our FY2012E price and margin assumptions for most metals are quite conservative compared to current spot prices. We expect the metals sector to contribute to 11% of FY2012E net profits of the BSE-30 Index and 10% of incremental profits for FY2012E.

India Strategy

We are comfortable with our earnings estimates of metal companies given sufficient buffers Price assumptions for metal companies, March fiscal year-ends, 2011-12E (US\$/ton)

	Price assum	ptions	Historic	al prices

#### High interest rates, fuel prices pose additional risks to earnings

We also highlight risks to earnings for the market from high interest rates. High debt companies in the infrastructure, real estate, telecom and utilities sectors may face additional earnings risks other than those from weaker-than-expected operating conditions. Interest rates have gone up significantly over the past 3-4 months and can surprise negatively, if inflation turns out to be stickier versus our expectations.

Exhibit 9 shows the risks to interest expenses for companies under our coverage. We assume 200 bps higher interest rates for FY2012E versus in FY2011E for this exercise. We note that this is a hypothetical exercise and several companies have overseas borrowings, where rates may not go up significantly. Nonetheless, many of these companies face related risks of depreciation in the value of the Indian Rupee versus the currency of the foreign loans, which would impact earnings negatively (through increase in their foreign currency loans) even if their LIBOR-linked borrowing costs do not change meaningfully.

Exhibit 10 gives our inflation trajectory as measured by WPI. We expect inflation to average 6.5% in FY2012E assuming crude oil prices revert to more reasonable levels of US\$85/bbl (Dated Brent) and the government does not have to increase domestic fuel prices to levels corresponding to current crude price levels (US\$98/bbl). We take comfort from the fact the crude oil fundamentals look reasonable with a significant amount of 'OPEC' spare capacity in CY2011E (see Exhibit 11). It would seem that high speculation (see Exhibit 12) has pushed up crude prices well above fundamental levels. However, it is hard to predict commodity prices given so many divergent factors. If crude prices stay above US\$95/bbl, India will have no option but to increase diesel prices during the course of the year. This will result in higher freight costs and impact earnings negatively for companies in the cement sector. We do not rule out negative impact on automobile volumes also given high cost of ownership of cars in a high-interest rate environment.

# Inflation might surprise on the higher side with diesel and gasoline price hikes WPI inflation (yoy change), 2006-12E (%)

# **NBFCs**

India

NBFCs: RBI prescribes standard asset provisions to create long-term buffer. The RBI has prescribed standard asset provisions of 0.25% for NBFCs. Notably, most NBFCs have been growing at a brisk pace over the past few quarters, reporting low slippages and making negligible provisions. As such, the standard asset provisions would augur well over the long term even as earnings decline. We find a near-term impact on PFC and REC's earnings though it is not clear if the guidelines are applicable to Government-owned NBFCs.

#### RBI notification on standard assets

RBI has prescribed provisions of 0.25% for standard assets of deposit accepting and non-deposit accepting NBFCs. The guidelines will be applicable with immediate effect and hence we expect a significant one-time impact on 4QFY11 earnings. As in the case of banks, these provisions cannot be clubbed with specific provisions that provide a buffer to gross NPLs.

#### More relaxed than norms for banks

The NPL recognition and provisioning norms for NBFCs are relaxed as compared to the banking sector likely due to a focus on the niche segments of NBFCs wherein delinquencies tend to be high (though eventual losses may be lower). Banks currently need to make provisions of 0.4% of standard assets (for most assets classes); thus the new standard asset provision norm is also more relaxed for NBFCs.

#### Standard asset provisions will create a buffer

The NBFC sector, has been growing at a rapid pace (20-25%+) across asset classes (auto, infrastructure, gold loans, microfinance). Strong economic conditions have supported good asset quality performance. Most companies follow the regulatory guidelines (which are somewhat relaxed) and have not created significant provisioning buffers. As such, the standard asset provisioning requirement will help normalize earnings to some extent.

#### IDFC well placed

IDFC and Mahindra Finance follow more stringent guidelines amongst NBFCs under coverage. While the NPL recognition criteria for Mahindra Finance are more stringent, IDFC makes standard asset provisions at 0.7% of gross disbursements and currently has a buffer of about Rs6 bn as compared the requirement of about Rs1.2 bn.

It is not clear if the guidelines will be applicable to PFC (and REC) as the current NBFC guidelines are not applicable to Government-owned NBFCs. However, PFC and REC have also been categorized as 'infrastructure NBFCs' and need to follow other guidelines (like minimum capital adequacy etc) applicable to 'infrastructure NBFC'.

PFC and REC has been growing at 22-28% CAGR over the past 3-4 years but have made negligible provisions as they have maintained good collection efficiency despite poor financial health of state utilities. Standard asset provisions will clearly be prudential in the backdrop of the poor financial health of these utilities. PFC will likely need to make provisions of Rs2.5 bn i.e. 33% of 4QFY11E PBT while REC will need to make provisions of Rs2.2 bn i.e. 23% of 4QFY11E PBT.

Kotak Securities Limited and its affiliates are a full-service, integrated investment banking, investment management, brokerage and financing group. We along with our affiliates are leading underwriter of securities and participants in virtually all securities trading markets in India. We and our affiliates have investment banking and other business relationships with a significant percentage of the companies covered by our Investment Research Department. Our research professionals provide important input into our investment banking and other business selection processes. Investors should assume that Kotak Securities Limited and/or its affiliates are seeking or will seek investment banking or other business from the company or companies that are the subject of this material and that the research professionals who were involved in preparing this material may participate in the solicitation of such business. Our research professionals are paid in part based on the profitability of Kotak Securities Limited, which include earnings from investment banking and other business. Kotak Securities Limited generally prohibits its analysts, persons reporting to analysts, and members of their households from maintaining a financial interest in the securities or derivatives of any companies that the analysts cover. Additionally, Kotak Securities Limited generally prohibits its analysts and presons reporting to analysts from serving as an officer, director, or advisory board member of any companies that the analysts cover. Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed herein, and our proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein. In reviewing these materials, you should be aware that any or all of the foregoing, among other things, may give rise to real or potential conflicts of intere

This material should not be construed as an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. We are not soliciting any action based on this material. It is for the general information of clients of Kotak Securities Limited. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Before acting on any advice or recommendation in this material, clients should consider whether it is suitable for their particular circumstances and, if necessary, seek professional advice. The price and value of the investments referred to in this material and the income from them may go down as well as up, and investors may realize losses on any investments. Past performance is not a guide for future performance, future returns are not guaranteed and a loss of original capital may occur. Kotak Securities Limited does not provide tax advise to its clients, and all investors are strongly advised to consult with their tax advisers regarding any potential investment.

Certain transactions -including those involving futures, options, and other derivatives as well as non-investment-grade securities - give rise to substantial risk and are not suitable for all investors. The material is based on information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied on as such. Opinions expressed are our current opinions as of the date appearing on this material only. We endeavor to update on a reasonable basis the information discussed in this material, but regulatory, compliance, or other reasons may prevent us from doing so. We and our affiliates, officers, directors, and employees, including persons involved in the preparation or issuance of this material, may from time to time have "long" or "short" positions in, act as principal in, and buy or sell the securities or derivatives thereof of companies mentioned herein. For the purpose of calculating whether Kotak Securities Limited and its affiliates holds beneficially owns or controls, including the right to vote for directors, 1% of more of the equity shares of the subject issuer of a research report, the holdings does not include accounts managed by Kotak Mahindra Mutual Fund. Kotak Securities Limited and its non US affiliates may, to the extent permissible under applicable laws, have acted on or used this research to the extent that it relates to non US issuers, prior to or immediately following its publication. Foreign currency denominated securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of or income derived from the investment. In addition, investors in securities such as ADRs, the value of which are influenced by foreign currencies affectively assume currency risk. In addition options involve risks and are not suitable for all investors. Please ensure that you have read and understood the current derivatives risk disclosure document before entering into any derivative transactions.
