Market View

The market opened on a positive note but plunged very sharply in the initial minutes of the trade and made an intra-day low of 4,040. However, it recovered strongly and made an intra-day high of 4,165 before finally closing at 4,153 almost at the day's high with a gain of around 2%. The volumes in Nifty future were significantly high amid huge volatility during the day and around 17 lakh shares were shed in open interest towards short covering. On the option front, the implied volatility of options remained considerable high indicating a lack of certainty or confidence about the market direction. The market is likely to open on a positive note on account of strong momentum, and if global cues are positive then we might hold onto the gains. Key support level for the Nifty is 4,130 and 4,075 and the resistance will be around 4,230.
