New Release
Strategy: Opportunities in uncertainties - banking, trading strategies
Change in recommendations
Cairn India: Upgraded to ADD - recent correction provides decent upside

## Updates

ICICI Bank: ICICI Bank international operations will likely take more MTM hits appears to be mirrored in price already

Reliance Infrastructure: Stable business, cash comfort and growth opportunities
Aban Offshore: New contracts in-line with estimates, upgrade to ADD
BPCL, HPCL, IOCL: Use recent rally in R\&M stocks to exit the stocks
Economy: RBI slew of measures may provide temporary stability but more may be needed

## News Roundup

- Hewlett-Packard Co (HP) said it will cut 24,600 jobs as part of its plan to integrate tech services giant Electronic Data Systems Corp (EDS), providing the first details of how extensive its restructuring of the combined company will be. (Mint)
- The USFDA is expected to limit imports and sales by India's largest drugmaker Ranbaxy Inc. (BS)
- Wipro Technologies and KPO firm Copal Partners have expressed interest in bidding for the Indian back office business of Lehman Brothers Holdings, the US-based investment banking firm that filed for bankruptcy protection. (BS)
- ICICI Bank will have to take a hit of US\$28 mn on account of the additional provisioning that ICICI Bank's UK subsidiary will have to make (the bank has already made a provision of about US\$12 mn against its US $\$ 80 \mathrm{mn}$ investment in senior bonds of Lehman Brothers). (ET, see our comment inside)
- Real estate major DLF's proposed SEZ along the Maharashtra-Goa border appears to be facing some trouble over land acquisition as hundreds of local residents protested against the company's compensation package. (ET)
- Reliance Infrastructure plans to build a 12 MT steel plant in Jharkhand and will soon achieve financial closure for its mega infrastructure project, the Mumbai Metro Rail project. In other news from the Anil Dhirubhai Ambani Group, Reliance Capital has said it will more than triple its current employee base and invest Rs2,000 crore in the insurance business, taking its cumulative investment to nearly a billion dollars. (ET)
- An internal government note circulated among policymakers forecasts inflation will peak at $13.2 \%$ next month and will remain in double digits till February 2009. (Mint)
- The Reserve Bank of India (RBI) stepped in yesterday, September 17, to check any potential adverse impact of the global financial turmoil on the Indian markets by announcing measures to ease the liquidity crunch and bolster the weakening rupee. (BS)

## Kotak Institutional Equities Research

kotak.research@kotak.com
Mumbai: +91-22-6634-1100

Opportunities in uncertainties-banking, trading strategies
Sanjeev Prasad: sanjeev.prasad@kotak.com, +91-22-6634-1229
Bhavesh Shah: bhavesh.shah@kotak.com, +91-22-6634-1498

- Valuations will likely provide downside support; reflects extant earnings risks in most sectors
- Economic fundamentals have improved of late
- Banking looks the best-sector has upside risks to earnings

We see buying opportunities in several quality stocks after the recent sharp correction in the Indian market. The market is now trading at the lower end of our valuation and trading band (13,500-17,500 for BSE-30 Index). In particular, we favor investment in the banking sector, which will likely be the biggest beneficiary of improved macroeconomic fundamentals. We have accordingly increased the weight (already overweight) on the banking sector further and made other small changes (more underweight on commodities). We see limited downside to the Indian market and see improved economic fundamentals partly counter-balancing global risks.

Valuations are reasonable-support exists unless global events unravel further
We find valuations of the Indian stock market (based on BSE-30 Index) quite reasonable at 13.4X FY2009E earnings and 11.1X FY2010E earnings (see Exhibit 1). The valuations become more attractive at 10.5X FY2009E after adjusting for the fair value of 'embedded' assets. We do not rule out further earnings downgrades despite several downgrades in 1-2QCY09 (see Exhibit 2) but believe that current valuations factor in possible downgrades in several sectors. Exhibit 3 gives valuation and earnings growth of the BSE-30 Index broken down by sectors.

From a portfolio perspective, we continue to focus on sectors and stocks that provide (1) high earnings visibility, (2) reasonable valuations based on earnings and/or 'embedded' assets and (3) low exposure to global issues. Exhibit 4 gives our model portfolio and Exhibit 5 gives our Top-10 list (this is unchanged). In our model portfolio, we have increased the weight of the banking sector and further reduced the weight on global commodities.

We believe weak global GDP growth will likely lead to low demand growth for finished products, which may lead to downward pressure on pricing, especially in industries where incremental capacity addition is very high in CY2008-10E.The technology sector faces similar global headwinds but offers 'decent' valuations also; FY2010E earnings could of course change dramatically if US BFSI clients were to completely slash their IT budgets.

## Economic fundamentals have improved dramatically over the past few weeks

We highlight (1) likely peaking out of inflation on the back of lower commodity prices, (2) steep decline in crude oil prices, which will alleviate BOP and fiscal issues and (3) a good monsoon, which will result in a decent kharif output.

1. Inflation may have peaked, which increases confidence about a decline in interest rates after two quarters. We believe inflation may have peaked given the recent sharp fall in global commodity and crude oil prices. We do not expect the government to cut retail fuel prices but highlight that inflation will be positively impacted by a decline in prices of industrial fuels, which are not fixed by the government. We note that R\&M companies continue to make losses on the four controlled products at current crude oil prices; in case of diesel, the most critical product by volumes, oil companies will break even at US\$63/bbl. Exhibit 6 shows our projected inflation trajectory over the next few months.
2. Lower crude oil prices will alleviate BOP and fiscal problems. We expect a significant improvement in India's BOP position from the recent steep decline in crude oil prices. A US\$1/bbl decline in crude prices results in lower trade deficit of around US $\$ 600 \mathrm{mn}$. Exhibit 7 shows sensitivity of India's BOP to various levels of crude oil prices. We note that current crude oil prices are meaningfully below our base-case crude price assumption of US $\$ 110 / \mathrm{bbl}$ and other scenarios in the exhibit.
3. Good monsoons to result in decent agriculture output. Exhibit 8 shows that the monsoon has been quite good despite an uncertaint start in July 2008. The sowing pattern has been impacted for a few crops as can be seen in Exhibit 9 but we expect the overall Kharif crop to be reasonable. Exhibit 10 shows our GDP growth projections for FY2009E and FY2010E.

Recommend to build positions with a 12-18 month horizon or adopt a fundamental-based trading strategy in likely two-way market of next few months. We recommend investors build positions in fundamentally strong stocks or adopt a fundamental-based trading strategy in solid stocks with a clear view of the fair valuation of the stocks. We concede that the latter may not be easy in volatile markets and the recent developments in the US have painfully raised doubts about fair valuations of assets. Accordingly, we focus on fundamentally-strong stocks where we have a good grip of underlying assets and earnings.

We have shortlisted stocks with (1) market capitalization greater than US\$3.5 bn, (2) we have a clear positive/negative bias on the stock and (3) trading volumes greater than US\$5 mn in both the exchanges (BSE+NSE) combined. Exhibits 11 and 12 list the stocks in which we recommend that investors increase/decrease positions.

## Cairn India: Upgraded to ADD—recent correction provides decent upside

Sanjeev Prasad : sanjeev.prasad@kotak.com, +91-22-6634-1229
Gundeep Singh: gundeep.singh@kotak.com, +91-22-6634-1286

- Stock price is discounting reasonable crude price (US\$68/bbl) in perpetuity
- Stock has corrected by $\mathbf{2 0 \%}$ in September 2008 alone; offers potential $\mathbf{2 3 \%}$ upside
- Revised rating to ADD (REDUCE previously) with a 12-month DCF-based target price of Rs245

We have upgraded Cairn stock to ADD from REDUCE noting the sharp correction in the stock price in September 2008 (20\%); the stock now offers 23\% potential upside to our 12-month DCF-based target price of Rs245. We believe that risks to Cairn's valuation have reduced meaningfully after the recent sharp correction in the stock price and crude oil prices. We note that the stock price is now (1) discounting crude price of US\$68/bbl in perpetuity, which seems reasonable and (2) no accretion to reserves. We like Cairn's fundamentals given its (1) strong resource base in Rajasthan with recoverable reserves at 1.1 bn bbls (including 300 mn bbls of EOR), (2) potential of new discoveries in its 12 exploration blocks and (3) strong execution capabilities.
Key downside risks stems from further decline in crude prices-may result in correction in Cairn's stock price.

Reward-risk balance more favorable after recent steep correction. We believe Cairn stock offers a good entry opportunity after its recent correction. Cairn stock has declined by 20\% in September 2008 and now offers 20\% potential upside to our 12month DCF-based target price of Rs245. Cairn stock has declined by $30 \%$ over the past three months led by decline in crude price (-US\$42/bbl) and has significantly under-performed the local index (BSE Sensex), which declined by $12 \%$ over the same period (see Exhibit 2).

Cairn's stock price has high positive correlation with crude oil prices although the valuation for Cairn does not vary significantly with higher crude oil prices. Thus, we would be aggressive in buying the stock when the stock is discounting a 'low' crude oil price in perpetuity. We believe this is the case currently. Our normalized long-term crude price is US $\$ 75 / \mathrm{bbl}$ based on the economics of a Canadian oil sands producer, which we treat as a marginal-cost producer.

Our reverse valuation exercise suggests that Cairn's current stock price is discounting US $\$ 68 / \mathrm{bbl}$ crude oil (Dated Brent) price in perpetuity based on (1) Rs41/US Dollar and (2) current reserves of Rajasthan block. We assume crude oil price (Dated Brent) of US\$75/bbl from CY2013E onwards to arrive at 12-month forward valuation of Rs245. However, we do not assume any cess or royalty on Cairn's portion of crude oil and assume a small discount of US $\$ 5 / \mathrm{bbl}$ versus Dated Brent price (the latter may be higher given the quality of Cairn's crude), which we see as downside risks to our fair valuation.

We see Rs180-250 as a good trading band for Cairn stock. Our current valuation for Cairn stock comes to Rs204 (12-month fair value is Rs244) at US\$75/bbl in perpetuity from CY2013E. The 12-month forward valuation rises to Rs282 if we change our normalized crude price assumption (beyond CY2013E) to US\$100/bbl and declines to Rs207 based on US\$50/bbl (see Exhibit 3).

We value Cairn India stock at Rs245

## ICICI Bank international operations will likely take more MTM hitsappears mirrored in price already

Tabassum Inamdar : tabassum.inamdar@kotak.com, +91-22-6634-1252
Ramnath Venkateswaran : ramnath.venkateswaran@kotak.com, +91-22-6634-1240

- ICICI Bank to take additional MTM hit on international book, both due to widening spread and Lehman bankruptcy
- We estimate hit to be lower than last year as spreads have widened less than last year so far, and the bank has reduced credit derivative exposure
- We retain ADD rating and target price of Rs870 per share

Given rising credit spreads, ICICI Bank will likely take more MTM hits in FY2009 on its international bond portfolio. We believe ICICI Bank BVPS will likely be impacted by $1 \%$ to $1.7 \%$ (assuming spreads do not widen anymore) and the stock will trade at 0.67X PBR standalone entity at this book. We believe the concerns are more than factored in the current price and we reiterate our ADD rating and 12 month target price of Rs870 per share.

Most of the exposure in UK subsidiary. ICICI Bank UK and Canada have an exposure of around US\$5 bn and US\$1 bn, respectively. We believe nearly $65 \%$ of its exposure in Canada is to treasury paper and the MTM hit will largely be concentrated in its UK subsidiary. ICICI Bank's UK subsidiary has an exposure of US $\$ 80 \mathrm{mn}$ in senior debt to Lehman. The company expects to recover around $50 \%$ of this on liquidation. The bank also has an exposure of US $\$ 25 \mathrm{mn}$ to AIG.

MTM hit in FY2008 at US\$435 mn. ICICI Bank had taken MTM hit of US\$435 mn in FY2008-US $\$ 220 \mathrm{mn}$ on CDO and US $\$ 215 \mathrm{mn}$ on investment book. Of this, US $\$ 235$ mn was on international subsidiaries (US\$220 mn in its UK subsidiary) and US\$170 mn on the India book.

MTM hit on investment book will likely be lower. Given the lack of detailed information we are unable to quantify additional losses. However, we believe the hit will likely be lower in FY09 compared with FY08 as the increase in spread across most international securities in Sep '08 over Mar '08 is less than that between Mar '08 and Mar '07. Additionally, ICICI Bank has reduced its exposure to international credit derivative products to US $\$ 80 \mathrm{mn}$, from US $\$ 600 \mathrm{mn}$. We believe aggregate losses at current spreads could range between US\$150 mn and US $\$ 250 \mathrm{mn}$, implying a book value hit of $1 \%$ to $1.7 \%$, post tax. We would like to highlight here that the current spreads likely reflect a significantly negative market sentiment and any resolution on AIG may lead spreads to recover and MTM hit to reduce.

## Movement of credit default spreads on 1-yr senior debt paper (bps)

## Reliance Infrastructure: Stable business, cash comfort and growth opportunities

Aman Batra : aman.batra@kotak.com, +91-22-6634-1231
Murtuza Arsiwalla : murtuza.arsiwalla@kotak.com, +91-22-66341-125

- Cash accounts for a significant $60 \%$ of the current market price
- EPC to provide earnings growth; extant power business to provide stable cash flows
- Trading at 1.15X P/B and 17X P/E on FY2009E
- Reiterate BUY rating and target price of Rs1,250/share

We believe that a strong and liquid balance sheet, predictable cash flows of existing business puts Reliance Infrastructure (RELI) in an excellent position to exploit emerging growth opportunities in power and infrastructure development. We note Rs516/share of cash with RELI accounts for about $60 \%$ of the current market price of Rs843/share. The extant power operations provide steady cash flows while growth in EPC business will likely result in RELI's EPS to increase at a CAGR of 14\% during FY2008-11E. We estimate sharp increase in EPS beyond FY2012E when power projects in RPWR and some of the infrastructure projects start contributing significantly to earnings. RELI's stock price has corrected by $15 \%$ during the past one month and is now trading at 1.15X P/B and 17X P/E on FY2009E. We reiterate our BUY rating on the stock. Our SOTP-based target price of Rs1,250/share offers $48 \%$ upside from the current market price.

Cash accounts for a significant $\mathbf{6 0 \%}$ of the current market price. RELI has cash worth Rs516/share in its books-net cash (after accounting for unallocable debt) of Rs252/share (Rs58 bn) in the standalone company and additional attributable Rs264/ share for its 45\% stake in Reliance Power (RPWR), which has cash and equivalents of Rs 135.5 bn. Adjusted for cash of Rs516/share, the current market cap of RELI implies a value of Rs327/share (US\$1.7 bn) for the existing operations and growth opportunities. RELI's extant businesses include-(1) 941 MW of generation capacity, (2) distribution businesses in Mumbai and Delhi, (3) EPC business with revenues of Rs14 bn in FY2008 and outstanding order book of Rs210 bn.

Power business likely to provide stable cash flows, EPC business and other infra projects to propel growth. The earnings growth from the regulated power business is a function of capex incurred to increase the return-yielding equity base. We expect sedate growth in Mumbai license area as it needs lesser capex compared to Delhi where large investments are being made to improve the T\&D infrastructure and reduce losses. We expect RELI's EPC business to benefit from the large capacity addition planned ( $\sim 28,200 \mathrm{MW}$ ) by RPWR as well as increased orders from IPPs/state generation companies. Our value of the EPC business at Rs115/share could see a significant upside as we have not included the orders expected from RPWR in our financial projections. We note that current order book of Rs210 bn includes only one contract from RPWR—the EPC contract of Rs128 bn for the 3,960 MW Sasan UMPP.

Traction on existing urban infrastructure projects, tapping other opportunities in infrastructure space. Infrastructure projects do not currently contribute to the revenues and profits of RELI. However, Reliance Infraventures-the urban infrastructure arm of RELI-is demonstrating steady progress in execution of urban infrastructure projects undertaken. The five road projects ( 400 km in Tamil Nadu) have achieved financial closure and as per management two of these projects will likely commission in FY2009. Mumbai Metro project has tied-up term loans of Rs12 bn and will likely achieve financial closure shortly. Management expects to commission the ahead of the scheduled commissioning of September 2012. In addition to steady progress shown by RELI in execution of extant urban infrastructure projects, RELI has pre-qualified to bid for several other projects in the urban infrastructure space. These include-(1) 32 km Mumbai Metro Phase-2 (est. cost Rs80 bn), (2) 20 km MRTS project in Amritsar (est. cost Rs50 bn), and (3) 136 km Eastern Peripheral Expressway at Delhi (est. cost Rs40 bn).

SOTP-based target price of Rs1,250/share. We retain our BUY rating and target price of Rs1,250/share. Our SOTP-based target price comprises-(1) Rs177/share from the existing generation, transmission and distribution businesses, (2) Rs115/share for the EPC business, (3) Rs673/share for $45 \%$ stake in Reliance Power valued at 20\% discount to our target price of Rs180/share, (4) Rs19/share as the equity- value of the five BOT road projects under-construction and (5) cash and investible surplus in books of Rs252/share. We note RELI is focusing on the infrastructure space and has several projects (roads, metros etc) at the initial implementation stage that could be significantly value accretive. Our SOTP includes only the value accretion from road projects and await substantial progress (including financial closure) for other projects before ascribing any value to these projects.

Reliance Infrastructure, Sum-of-the-parts valuation

|  | Methodology | Key assumptions |  |  | $\begin{array}{r}\text { Per share } \\ \text { value (Rs) } \\ \hline\end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| BSES <br> (Mumbai distribution, Dahanu) | DCF-equity | The business enjoys a stable regulated regieme and very high predictability of cash flows. We have not built in any incremental generation capacity in Mumbai. |  |  | 131 |

Aban Offshore: New contracts in-line with estimates, upgrade to ADD
Nitin Bhasin : nitin.bhasin@kotak.com, +91-22-6634-1395
Augustya Somani : augustya.somani@kotak.com, +91-22-6634-1328

- Aban Pearl contracted for five years at US\$286,000 per day; FY2010E revenue visibility increases to $57 \%$
- Recent contract announcements in line with estimates, support our dayrate assumptions
- Upgrade to ADD on account of $16 \%$ upside potential and improving revenue visibility

Aban announced a five-year contract for its submersible rig 'Aban Pearl' at a dayrate of US\$286,000 with $3 \%$ annual increment. We highlight that the dayrate was marginally lower than our estimates of US\$300,000. Further, the management expects new contract announcements for idle rigs in the near-term; two rigs remain idle currently. The new contract announcements increase FY2010E revenue visibility to $57 \%$ from $48 \%$. Recent contract announcements have been in line with our day rate assumptions and we do not expect any significant upside to our estimates. Impending jackup supply and softening crude prices may constrain jackup dayrates. However, given the $16 \%$ upside potential and improving revenue visibility, we upgrade the stock to ADD from REDUCE but maintain our target price. 5\% lower jackup dayrates would lower our target price to Rs2,300.

## New contract announcements in line with estimates

Aban recently announced contracts for its submersible rig-Aban Pearl and new build jackup rig-DD 7 for at dayrates in-line with our estimates. The new contracts confirm our dayrate assumptions and support our revenue estimates (see Exhibit 1).

- Aban Pearl contracted for five years. Aban announced a five year contract for its submersible rig-Aban Pearl. The rig will be working in Venezuela at a day rate of US $\$ 286,000$ with $3 \%$ annual increment. Aban Pearl is currently undergoing repairs and is expected to be operational by the beginning of November 2008.
- DD 7 gets 3 month contract at US\$200,000. Aban had recently contracted its newbuild jackup rig DD7 at US\$200,000 with Coastal Energy of Thailand. The contract is for a three month period with an extendable option of three months. The rig will be mobilized to the site by mid-September 2008.
- Management guides for closing few more contracts shortly. Management has guided positively for shortly finalising contracts for its currently idle rigs Aban VII and Murmanskaya. We believe contracting of these idle rigs and three other jackup rigs (DD 3, DD4, DD5) which are nearing contract completion will further increase the revenue visibility.

## FY2010E revenue visibility improves to $57 \%$; non-contracted jackups remain a

 concernThe recent contract announcements have improved the FY2010E revenue visibility to $57 \%$ from $48 \%$ earlier. However, jackups remain vulnerable to softening day rates as only $40 \%$ of FY2010E jackup revenues is contracted till now. Large addition of newbuild to the global jackup fleet over the next 15-20 months can push jackup dayrates lower.

## Oil price impact-wide fluctuation makes long-term decision making difficult

We believe wide fluctuations on the oil price movement make decision making difficult for long-term E\&P project viability. We do not foresee any immediate cancellation of the projects due to the recent sharp correction in oil prices. The current crude oil price of around US $\$ 90 / \mathrm{bbl}$ does not necessitate a reduction in E\&P capex by the oil companies. However, if the oil price continues its downward trend then few of the ultra-deepwater projects may be put on hold. We believe strong oil price movements may have short-term sentimental impact on the stock prices (see Exhibit 4).

## Upgrade to ADD as recent contracts increase revenue visibility; maintain TP

We upgrade our rating to ADD (from REDUCE) supported by increased revenue visibility and positive guidance from management for more contract closure in the near-term. We maintain our 12-month DCF-based target price of Rs2,700 which provides $16 \%$ upside from current levels. We expect jackup dayrates to be stable around $-5 \%$ to $+5 \%$ of the current levels over the next year. Our sensitivity analysis shows that the current stock price values $5 \%$ lower dayrates than our current estimates, hence we expect limited downside risks from the current levels (see Exhibit 5).

Exhibit 1: Recent contract announcements have been in-line with our estimates

|  | Contract rate | Our estimate |  |
| :--- | ---: | ---: | ---: |
|  | (US \$) | (US \$) | (\%) |

BPCL, HPCL, IOCL: Use recent rally in R\&M stocks to exit the stocks
Sanjeev Prasad : sanjeev.prasad@kotak.com, +91-22-6634-1229
Gundeep Singh : gundeep.singh@kotak.com, +91-22-6634-1286

- Crude prices may have come off but are nowhere near comfort zone
- Weakening rupee has partly offset the benefits of decline in crude prices
- Use recent run-up in stocks to exit as significant downside risks to earnings exist

We see the recent rally in R\&M stock led by sharp decline in crude prices as perplexing given (1) significant weakening of rupee and (2) continued high marketing losses. BPCL, HPCL and IOCL stocks have surged $6-24 \%$ since September 1, 2008 led by a sharp decline in crude prices and likely lower gross under-recoveries. Lower crude prices will lead to lower losses but we note that even at current levels at crude prices (US\$87/bbl) and exchange rate of Rs46.6/US\$, under-recoveries will likely remain high at $\sim$ Rs 1.5 tn (Rs771 bn in FY2008). More important, there is no clarity on FY2009E earnings of the downstream oil companies. We expect the government to reduce the amount of oil bonds proportionately. We advise investors to exit positions at current levels as significant downside risks exist to earnings of downstream companies.

Earnings of downstream companies-more variables than just crude oil price. We note that earnings of downstream companies will continue to depend on contributions from the government and upstream companies towards under-recoveries apart from the level of crude oil prices. Also, refining margins and inventory gains/ losses are critical and we are not very hopeful about these two factors in FY2009E compared to FY2008 when the companies benefited significantly from high refining margins and large inventory gains.

We believe that the government will likely adjust the amount of oil bonds in line with crude oil prices. Thus, we suspect the government will give the downstream oil companies as much oil bonds as required to keep the companies' FY2009E profits at FY2008 levels. In FY2008, the companies reported a combined PBT of Rs152 bn only when average crude price was US\$79/bbl and exchange rate was Rs40.3/US\$ (Exhibit $2)$.

We believe that earnings of PSU R\&M companies will also be under pressure given likely decline in profits of the refining segment. The strong performance of the refining division was able to shield the losses of the marketing division of these companies to some extent in FY2008 and 1QFY09. However, we do not expect this to be the case in FY2009E and FY2010E given (1) likely lower benchmark refining margins and (2) lower/nil adventitious gains versus FY2008E unless crude prices rise sharply later in the year. We highlight that crude prices (Dated Brent) were at US\$100/bbl on February 29, 2008 versus US\$61 on February 29, 2007. Exhibit 3 shows the reported refining margins, inventory gains and overall profitability of BPCL, HPCL and IOCL for FY2008.

Crude prices might have tumbled but marketing losses continue to be high. Crude prices have declined significantly after touching a record high of US\$145/bbl (Dated Brent price) in July2008. However, even at current levels of crude price (US\$87/ bbl), the market losses continue to be high; we compute marketing margin at -Rs3.4/ liter for gasoline, -Rs7.1/liter for diesel and subsidy loss of Rs300/cylinder on LPG and Rs27/liter for kerosene. We note that current losses on the four regulated products are significantly higher than FY2008 losses (see Exhibit 4).

However, if we assume an exchange rate at Rs42/US\$ versus Rs46.6/US\$ currently, the marketing losses will decline to -Rs0.5/liter for gasoline (versus -Rs3.4/liter currently) and -Rs3.9/liter for diesel (versus -Rs7.1/liter currently).

The current loss of Rs3.4/liter on gasoline translates into US\$12/bbl price, which means the crude price should fall to US $\$ 75 / \mathrm{bbl}$ (assuming Brent at US $\$ 87 / \mathrm{bbl}$ ) for breakeven on gasoline. Similarly for diesel, the current loss of Rs7.1/liter of translates into US\$25/ bbl price, which means crude price should fall to US\$63/bbl for breakeven on diesel. However, the exercise assumes that the fall in crude price will translate into a similar fall in product price.

Weakening rupee partly offsets the impact of decline in crude price. We would not be overly excited about the impact of recent steep decline in crude oil prices on gross under-recoveries for the industry given the offsetting impact of a weakening rupee. Crude prices (Dated Brent) have declined by 29\% (US\$36/bbl) since July 31, 2008; however, the rupee has also weakened by $10 \%$ over the same period. We note that even at current levels of crude prices (US\$87/bbl) and exchange rate of Rs46.6/ US\$ for the remaining part of FY2009, under-recoveries will be ~Rs1.5 tn (Exhibit 5), which is significantly higher than FY2008 subsidy loss of Rs771 bn.

Exhibit 2 gives the under-recoveries at various levels of crude price. At US\$120/bbl Dated Brent price, we compute gross under-recoveries at Rs1.9 tn. We note that at a crude price of US\$120/bbl, the net subsidy burden to be borne by downstream companies would be Rs311 bn, assuming upstream companies bear 33.3\% of the under-recoveries and the government gives oil bonds worth Rs946 bn. This is significantly higher than Rs161 bn of net under-recoveries of downstream companies in FY2008 and Rs 151 bn of pre-tax profits. If the government caps the subsidy loss for upstream companies at Rs450 bn and issues only Rs946 worth of oil bonds, the net under-recoveries for downstream companies would jump to Rs489 bn. This is significantly higher than the downstream sector's FY2008 adjusted pre-tax profits (before under-recoveries).

R\&M companies have outperformed the market significantly in September 2008 Relative stock performance of BPCL, HPCl and IOCL (\%)

## RBI slew of measures may provide temporary stability but more may be needed

Mridul Saggar : mridul.saggar@kotak.com, +91-22-6634-1245

- Additional Liquidity support of $1 \%$ of NDTL under LAF - implies diluted $1 \%$ SLR cut
- Second LAF reinstituted on all days
- Interest rate caps on FCNR(B) and NR(E)RA deposits increased
- Measures likely to stabilize rupee at about Rs46/USD in near term; soften overnight interest rates to $9 \%$ but more measures may be needed ahead

With INR/USD depreciating to 46.88 at close of September 16 (unprecedented 1.7\% depreciation in a single day and $14.4 \%$ so far in FY2009) and call rates spiking to a high of $16 \%$ intra-day, RBI stepped in to provide succor on liquidity and currency. It announced market measures aimed at improving (1) US dollar inflows and (2) ease liquidity tightness. In our view, the latter is also significant as it immediately improves RBI's degrees of freedom for protecting the rupee by its dollar selling interventions in forex markets without fears of rupee liquidity drying up further. We expect these measures to stabilize the rupee at stronger than current levels, but further measures to augment dollar inflows may be needed ahead.

## Additional Liquidity Support under LAF

We believe that the RBI move on additional liquidity support under LAF is a de-facto cut in the Statutory Liquidity Ratio (SLR) of 1\%, though this comes with riders that dilute its impact. The RBI move is intended to:

- Allow banks to obtain liquidity from RBI under its Liquidity Adjustment Facility (LAF) against the collateral of eligible securities that are in excess of the prescribed SLR to the extent of $1 \%$ of their net demand and time liabilities (NDTL).
- The banks would, however, have to seek waiver of penal interest rate for this SLR breach of $25 \%$.

It is a $\mathbf{1 \%}$ SLR only in a limited sense - deterrent attached and limited use In our view, though the RBI move does not exactly tantamount to a $1 \%$ SLR cut. Our reasoning:

1) The rider that banks need to apply for the waiver of penalty on SLR violation of stipulated $25 \%$ (up to $24 \%$ ) has a reputational cost for the banks and would act as a stringent deterrent.
2) The measure is purely ad hoc and temporary and banks would not be confident on doing ALM management on this basis
3) Banks may still have to do borrowings in CBLO and repo market outside LAF on the basis of $25 \%$ SLR

SLR ratio is the ratio of bank's investments in eligible assets (cash, gold and unencumbered approved securities which are G-secs) to its NDTL. First violation of SLR is penalized at a $3 \%$ above the bank rate (currently at 6\%). In our calculation, an SLR cut of $1 \%$ at the current juncture would have released lendable resources of the banks (through credit or non-SLR investments) of about Rs370 bn (about US\$8 bn). However, as a result of (1) the requirement that banks need to apply for the release of resources and (2) that the measure is ad hoc and temporary, the release of resources may turn out to be only nominal.

## Re-introduction of Second LAF on all days may help bring overnight rates to 9\%

In our view, RBI move to re-introduce Second LAF (SLAF) on a daily basis would help to immediately bring overnight rates - call, CBLO and market repo - to the upper end of the LAF corridor set by the RBI repo rate, currently at $9 \%$. RBI announced that:

- It would henceforth be conducting SLAF daily till further notice

Currently, RBI conducts LAF between 9.30-10.30 am daily, while the SLAF is conducted between 4.00-4.30 pm only on reporting Fridays. As a result, except for the reporting Fridays, banks which may not be able to correctly assess their liquidity facilities can get caught short intra-day and this puts upward pressures on the overnight rates when the system on the whole is in substantially in liquidity deficit. Currently, liquidity conditions are tight in view of advance tax flow collections. As a result, the call money rates had spiked to a weighted average of $13.1 \%$ (range of 8.7-16.0\%) yesterday.

## Interest rate caps on bank deposits from abroad increased

In an effort to augment dollar inflows to protect sharp depreciation of rupee, RBI increased the interest rate caps on bank deposits from abroad as follows:

- Interest rate ceilings on Foreign Currency Non-Resident deposits on which exchange risk is borne by the banks [FCNR(B)] of all maturities increased by 50 bps (to LIBOR/ Euribor/Swap rates minus 25 bps from LIBOR/Euribor/Swap rates minus 25 bps)
- Interest rate ceilings on Non-Resident (External) Rupee [NR(E)RA] deposits of 1-3 year maturity increased by 50 bps (to LIBOR/Euribor/Swap rates plus 50 bps from the earlier ceiling at LIBOR/Euribor/Swap rates)

We believe that these measures would have a small impact on increasing dollar inflows. There have been net inflow of US\$0.5 bn in Non-resident Indian (NRI) deposit schemes in the first four months of FY2009 (April-July), of which NR(E)RA accounts for US $\$ 0.28$ bn and Non-Resident Ordinary (NRO), which is also maintained in rupees accounts for US $\$ 0.62$ bn. In contrast, there have been outflows in FCNR(B) of US $\$ 0.40$ bn. Increase in interest rate ceilings is aimed at improving the inflows ahead but are likely to have only a small impact. The stock of NRI deposits stood at US\$42.6 bn (US\$26.6 bn in NRE(E)RA+US\$13.8 bn in FCNR(B)+US\$3.3 bn in NRO).

## Combined impact could stabilize rupee in near term, but more measures may be needed

As an update to our assessment to our Economy note of September 16; 'Liquidity may become less tight but rupee likely to be in 46 plus zone in 3QFY09' we note that the combined impact of liquidity and forex measures may stabilize rupee in near term and rupee could head back towards 46 mark, but more measures may be needed to quell the speculative attack on the rupee driven by arbitrage in the non-deliverable forward (NDF) markets. The liquidity situation could also improve moderately, but our fundamental call in yesterday's note stays. In our view, to alter that more measures may be necessary which could include (1) reversal to ECB regime of pre-August 2007 (2) further increase in FIl investment caps in debt market (towards end of May, 2008, these caps were hiked to US\$5 bn in Gsec and US\$3 bn in corporate bond markets in place of earlier limits of US\$3.2 bn and US\$1.5 bn). Increase in FDI cap in insurance to $49 \%$ from existing $26 \%$ may, however, require some more time in view of requirement to make legal amendment.

## Ratings and other definitions/identifiers

Rating system
Definitions of ratings
BUY. We expect this stock to outperform the BSE Sensex by $10 \%$ over the next 12 months.
ADD. We expect this stock to outperform the BSE Sensex by $0-10 \%$ over the next 12 months.
REDUCE: We expect this stock to underperform the BSE Sensex by $0-10 \%$ over the next 12 months.
SELL: We expect this stock to underperform the BSE Sensexby more than $10 \%$ over the next 12 months.

Our target price are also on 12-month horizon basis.
Other definitions
Coverage view. The coverage view represents each analyst's overall fundamental outlook on the Sector. The coverage view will consist of one of the following designations: Attractive (A), Neutral (N), Cautious (C).

Other ratings/identifiers
NR = Not Rated. The investment rating and target price, if any, have been suspended temporarily. Such suspension is in compliance with applicable regulation(s) and/or Kotak Securities policies in circumstances when Kotak Securities or its affiliates is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.
CS = Coverage Suspended. Kotak Securities has suspended coverage of this company.
NC = Not Covered. Kotak Securities does not cover this company.
$\mathbf{R S}=$ Rating Suspended. Kotak Securities Research has suspended the investment rating and price target, if any, for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon.
NA = Not Available or Not Applicable. The information is not available for display or is not applicable.
NM = Not Meaningful. The information is not meaningful and is therefore excluded.

Copyright 2008 Kotak Institutional Equities (Kotak Securities Limited). All rights reserved.
Kotak Securities Limited and its affiliates are a full-service, integrated investment banking, investment management, brokerage and financing group. We along with our affiliates are leading underwriter of securities and participants in virtually all securities trading markets in India. We and our affiliates have investment banking and other business relationships with a significant percentage of the companies covered by our Investment Research Department. Our research professionals provide important input into our investment banking and other business selection processes. Investors should assume that Kotak Securities Limited and/or its affiliates are seeking or will seek investment banking or other business from the company or companies that are the subject of this material and that the research professionals who were involved in preparing this material may participate in the solicitation of such business. Our research professionals are paid in part based on the profitability of Kotak Securities Limited, which include earnings from investment banking and other business. Kotak Securities Limited generally prohibits its analysts, persons reporting to analysts, and members of their households from maintaining a financial interest in the securities or derivatives of any companies that the analysts cover. Additionally, Kotak Securities Limited generally prohibits its analysts and persons reporting to analysts from serving as an officer, director, or advisory board member of any companies that the analysts cover. Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed herein, and our proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein. In reviewing these materials, you should be aware that any or all of the foregoing, among other things, may give rise to real or potential conflicts of interest. Additionally, other important information regarding our relationships with the company or companies that are the subject of this material is provided herein.

This material should not be construed as an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. We are not soliciting any action based on this material. It is for the general information of clients of Kotak Securities Limited. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Before acting on any advice or recommendation in this material, clients should consider whether it is suitable for their particular circumstances and, if necessary, seek professional advice. The price and value of the investments referred to in this material and the income from them may go down as well as up, and investors may realize losses on any investments. Past performance is not a guide for future performance, future returns are not guaranteed and a loss of original capital may occur. Kotak Securities Limited does not provide tax advise to its clients, and all investors are strongly advised to consult with their tax advisers regarding any potential investment.
Certain transactions -including those involving futures, options, and other derivatives as well as non-investment-grade securities - give rise to substantial risk and are not suitable for all investors. The material is based on information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied on as such. Opinions expressed are our current opinions as of the date appearing on this material only. We endeavor to update on a reasonable basis the information discussed in this material but regulatory, compliance, or other reasons may prevent us from doing so. We and our affiliates, officers, directors, and employees, including persons involved in the preparation or issuance of this material, may from time to time have "long" or "short" positions in, act as principal in, and buy or sell the securities or derivatives thereof of companies mentioned herein. For the purpose of calculating whether Kotak Securities Limited and its affiliates holds beneficially owns or controls, including the right to vote for directors, $1 \%$ of more of the equity shares of the subject issuer of a research report, the holdings does not include accounts managed by Kotak Mahindra Mutual Fund.Kotak Securities Limited and its non US affiliates may, to the extent permissible under applicable laws, have acted on or used this research to the extent that it relates to non US issuers, prior to or immediately following its publication. Foreign currency denominated securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of or income derived from the investment. In addition, investors in securities such as ADRs, the value of which are influenced by foreign currencies affectively assume currency risk. In addition options involve risks and are not suitable for all investors. Please ensure that you have read and understood the current derivatives risk disclosure document before entering into any derivative transactions.
This report has not been prepared by Kotak Mahindra Inc. (KMInc). However KMInc has reviewed the report and, in so far as it includes current or historical information, it is believed to be reliable, although its accuracy and completeness cannot be guaranteed. Any reference to Kotak Securities Limited shall also be deemed to mean and include Kotak Mahindra Inc.
