Realty	3,488	3.19

SNAPSHOT

The domestic equity markets gained strength during the week ended September 03, 2010 on the back of robust gross domestic product (GDP) growth and strong global cues. The benchmark indices gained over one percent each in the passing week while the broader indices outperformed their larger peers with an up-move of around three percent each. The main bourses edged higher in three out of five sessions in the week. Gains remained broad-based with all the sectoral indices of the BSE, barring oil & gas counter, finishing the week in the green. Realty, fast moving consumer goods and auto stocks hogged the limelight. The local markets failed to mirror their regional peers in the start of the week and after witnessing a volatile trade they finished on a flat note while some late pullback left the markets with reduced losses on the very next day as robust GDP growth provided some breather to the bulls. *The local economy expanded at 8.8% during the April-June 2010 quarter, its highest in more than two years.*

WEEK GONE BY

The BSE's 30-share Sensex regained the psychological 18,200-level in the week while the NSE's 50-share Nifty reclaimed the crucial 5,450-mark. Bombay Stock Exchange (BSE) Sensex jumped 223.02 points or 1.24% to 18,221.43 during the week ended September 3, 2010 while the S&P CNX Nifty increased 70.70 points or 1.31% to 5,479.40. The BSE Mid-cap index surged 2.94% to 7,859.11 and the Small-cap index soared 2.82% to 9,912.64. On the National Stock Exchange (NSE), Bank Nifty zoomed 2.46% to 10,991.20, CNX Nifty Junior rose 2.14% to 12,078.60, CNX mid cap added 1.89% to 8,923.35 and CNX IT gained 1.17% to 6,076.10. In the BSE sectoral space the major gainers were Realty up by 107.91 points or 3.19% to 3,487.89, Fast Moving Consumer Goods (FMCG) up by 102.02 points or 3.04% to 3,456.75, Auto up by 260.43 points or 2.99% to 8,970.48, Metal up by 435.74 points or 2.92% to 15,346.56 and Bankex up by 255.40 points or 2.09% to 12,471.47. On the other hand Oil & Gas down by 110.42 points or 1.09% to 9,981.75 was the lone loser in the BSE sectoral space.

WEEK AHEAD

The local equity markets may consolidate near the current levels in the coming week as the overall scenario still remains uncertain. Though the markets showed some strength this week on the back of bargain hunting from investors, the concerns over exhaustive valuation are not yet cooled off. Buying support from FIIs may help the markets to hold on to higher levels next week. There will be only four trading sessions next week as the markets will remain closed on September 10 (Friday) for Ramzan Id holiday. The markets may search for cues on the start of the next week as the US indices will remain shut on September 06 (Monday) on account of Labour Day. On the other hand, the key July month Index of Industrial Production (IIP) data from the local economy is due on Friday but the markets will remain closed that day so it may make its impact in next week only. The IIP for the month of June had remained below the market expectations at 7.1% and the trend of slower growth is likely to continue in the reporting month. On global front, weekly jobless claims data and report on July wholesale trade from the US will be watched closely by investors. Overall we expect a range bound scenario between 5340-5560 for the next week though any positive out come will be the key trigger to past above 5600 level. HAPPY TRADING...

CNX IT		
Sep Fut	6083	1.6%
Sep OI	26800	133.0%

TREND LINE CONJECTURE:-

We have mentioned earlier that any bullish confirmation will required more than three consecutive days of closing above 5530. Exactly the same spot index found some resistance near 5530 and currently in profit booking zone. We believe 5340-5350 should be the near term support where we might see some turn around. If we projected the trend line from the highs of 5399 coupled with 50 days moving average, we might get the confirmation of 5340-5350 as a near by cushion.

In the Sensex, island reversal gap between 18297-18500 could be the crucial resistance. Once spot index manages to breach this level with decisive volumes we might see some more upside near to 19700 however possibility of consolidation shouldn't be rule out.

ELLIOT WAVE CONJECTURE:-

Remember we have already determined 'X2' wave of this diametric formation shaped in benchmark indices with nearby target at around 16850 in previous sessions. Now with above the target levels, 'X2' wave continued to show strength however advance decline ratio displays lack of conviction around these levels. As we have assumed that we may be into 'C' wave of the A-B-C pattern from 17776. Since last Friday(26 Feb'10), the Index has been forming 'HIGHER TOP' formation, which continues the optimistic preconceived notion. As in the A-B-C move, entire move from the lows of 15651 treated as a "c" leg, conceivably waiting 'Oct high of 17493 to be near term top decisively. *During the nutshell the perfidious wave marked as corrective 'B' wave, 86% up-move originated 8047 (6th March'09) to 14931 (19th May'09) adage FII inflows of only Rs.25000 crs. Since 19th May, the FII inflows encompass explode by further Rs.62000 crs, in response to which, market moved barely 16%.*

Beneath this bullish unusual composition, a Complex insider wave has been shaping from March lows in 2009. Within this, the 1st move ended at 17493 as a Diametric formation, and 2nd corrective move now seems to shaping from last week lows as domestic indices manages to past 17493 on the last day of 2009 though index unable to sustain these levels on closing basis.. Under this alternative, the 2nd counteractive move if it possible mostly a diagonal move, which can triggered the Sensex ahead of 17500. If it's a Diametric, the size of the 2nd corrective would be about 6-7 months with a value target of 61.8% of the 1st corrective move mentioned earlier. This would gauge to 19700 on Sensex (preferably in Sept-March)

MOVING AVERAGES AND THE CANDLE STICK PATTERN:

The short term moving average is an indicator of the trend in the near future. The value for the short term moving average (20 DMA) is at 5464 and medium term moving average (50 DMA) is at 5406. Presently, the Nifty trading its above 50 DMA which would be treated as mildly bullish signal. Moreover as long as 5350 still act as a near by support, possibility of achieving 5600 could be on higher side.

RETRACEMENT AND GAP CONJECTURE:-

On 24Aug 09, Sensex formed a gap up of 122 points which might be an exhaustive one, having upper and lower values of 15,362 and 15,240 respectively. As per Japanese candle stick theory, any gap is an incitement for bulls/bears to get their positions in order to fill such gaps. As this gap was created on last to last August, the Sensex has already consumed more than 60 trading sessions and the gap has not filled yet. Unless this gap is filled, the Sensex will continue to move in upward trajectory in near term.

RETRACEMENT				COUNTER RETRACEMENT			
HIGHS	LOWS	POINTS	DAYS	LOWS	HIGHS	POINTS	DAYS
15600	13320	2280	21	13320	16002	2682	14
16002	14684	1318	11	14684	15958	1274	7
15958	15357	601	5	15357	16435	1078	3

Analyzing above table we scrutinize that there is continuous faster retracement taking place in the Sensex, which is an optimistic signal. There are three downward moves.

- The move from 15,600 to 13,220 took 21 days and it got retraced in 14 days.
- The move from 16,002 to 14,684 took 11 days and it almost got retraced in 7 days.
- The move from 15,958 to 15,357 took 5 days and it got fully retraced in just 3 days.

FIBONACCI RETRACEMENT:-

Entire rally from the lows of 4786 to 5487 took 9 trading sessions without any substantial correction. If we applying Fibonacci theory and took retracement of this current rally, 38% and 50% retracement stood at 5222 and 5139 level. Hence we believe these levels will act as a materialistic support in near term. Any break down above this level could open the flood gates and possibility of losing another 80-100 pts should be on higher side.

OSCILLATORS

OSCILLATORS	CURRENT	AVERAGE
MACD (E9,E24,S9)	13.54	21.53
RSI (14,E9)	54.58	53.39
STOCHASTICS	%K= 82.01	%D= 64.24

FINAL VERDICT:

Remember we have said that breakout above the Neckline of the suspected H&S formation has been proving elusive for the time being. This has been mainly due to lack of conviction shown by reduction in volumes. Also after clocking the highest-ever volume on the second day after election results, we have seen volumes consistently lying in downward arena. Moreover Union Budget 2010-11 is having thrust on Infrastructure, boosted investors community a lot. We believe in medium to long term domestic indices seems to be highly promising for 40% to 60% return at current levels though global sentiments still a cause of concern. In the short term markets seems to be typically range bound to 4650-5370 with cautiously optimistic approach. Hence any correction in near term should be used a decent opportunity to go long.

However at its highest levels of 5399 and above 17800 on Sensex, P/E ratio has reached to 22+, which is the maximum figure under normal circumstances. Only foams can push it higher towards 27-28. Such fizz happened during 2000 and 2008, which were 8 year cyclical tops. Moreover current move by FED by increasing Discount rate may be an alarm for FII's. Hence clients are advised to trade accordingly with extremely cautious view. On the positive side if we totally rely on the current rally and consider 2008 a retracement year, we might see key benchmark indices to cross its previous highs of 2008 very soon. With such scenario we may witnessed a long term consolidation (similar in 1992-2003) however such probability looks sluggish at this point of time.

Technicals

SCRIP	BLUE DART	CMP	1165
Recommendation	BUY	Buy Price Near	1140-1145
Trend	BULLISH	Stop Loss Below	1120
MACD	Buy mode	First Target	1200
ROC	Buy mode	Second Target	1220
RSI	Buy mode	Time Frame	1-2 Week
50 Days SMA	780		
200 Days SMA	607		

This stock formation is just like shaven bottom after getting good support at 1100 level and tends to move in upward trajectory with nearby targets at around Rs1200. Currently this scrip is trading above all the three moving averages 20, 50 and 200 DSMA and the technical oscillators RSI and STOCHASTICS show some bullish momentum in near term. Hence we recommend BUY strategy in this stock.

SCRIP	AARTI IND	CMP	58.4
Recommendation	BUY	Buy Price Near	55
Trend	BULLISH	Stop Loss Below	50
MACD	Buy mode	First Target	61
ROC	Buy mode	Second Target	66
RSI	Buy mode	Time Frame	1-2 Week
50 Days SMA	48		
200 Days SMA	37		

This stock is consistently forming higher top higher bottom formation from the lows of RS 50. Currently this stock has broken stiff resistance level around Rs 57 and tends to move in upward trajectory with nearby targets at Rs 61. Currently this stock is trading above all the the moving averages (50 and 200 DSMA) and the technical indicators RSI and MACD shows bullish momentum in near term. Hence we recomend BUY strategy in this stock.

SCRIP	ADANI POWER	CMP	134
Recommendation	SELL	Sell Price Near	138-140
Trend	BEARISH	Stop Loss Below	144
MACD	Sell mode	First Target	125
ROC	Sell mode	Second Target	120
RSI	Sell mode	Time Frame	1-2 Week
5 Days SMA	136		
50 Days SMA	112		

The stock is undoubtedly in a downtrend and facing a stiff resistance in the range of 143-145. If the market will correct further from this level the stock will easily meet its target around Rs 125. Currently, this stocks price is trading below the moving averages 05 DSMA which confirm shortterm weakness in the scrip. All the Daily indicators ROC, RSI and MACD are looking bearish.
