

Annual guidance blues

Short term trading opportunity- Sell

Infy reports on Apr 13 and will give its annual guidance on the same day. Given risks posed by uncertain US economic outlook, Rupee appreciation and client specific risks, we believe EPS growth guidance could be in the early 20s, a disappointment for the market. We and consensus are forecasting a 30% FY08 EPSg, which could see a downward revision of 3-5%. While this is a near term risk, we retain Buy, given our view that Infy can achieve a strong 25% EPS growth given we currently see no structural change to the offshoring trend. Prefer TCS (TACSF; Rs1247; C-1-7).

The US economy yo-yo

Even though the jury is out on the US economic outlook, we believe the Indian IT industry is concerned on possible slowdown and impact on pricing. Even volume growth may slow before picking up, as clients review spending priorities. In our view, a 1% change in price assumption could hit margins by ~100 bps.

Rupee appreciation, a nightmare

The Rupee/USD appreciation of 2% in 2 weeks has taken all by surprise and has been likely the result of the central bank abstaining from steadying the Rupee in a likely bid to manage rising inflationary pressures. If we assume a 1.6% higher avg Re rate (taking Mar 31,08 Rs/USD of Rs42), it would hit margins by 80bps.

Uncertainty in a few key clients could rein in guidance

Finally, we believe there could be uncertainty in growth prospects of few key existing or potential clients e.g. ABN Amro (in potential merger talks), BT Global (post its deal with Tech Mahindra) and in banks with mortgage exposure. We note that maybe not even 10% of revs are at risk, but this could cloud visibility.

“Guidance” clouds gather

Infy reports on Apr 13 and will give its annual guidance on the same day. Given risks posed by the uncertain US economic outlook, Rupee appreciation and certain client-specific risks, we believe EPS growth guidance could be in the early 20s, a disappointment for the market. We and consensus are forecasting a 30% FY08 EPSg, which could see a downward revision of 3-5%. While, this is a near-term risk, we retain our Buy rating, given our view that Infy can achieve a strong 25% EPS growth given we currently see no structural change to the offshoring trend.

If guidance disappoints... it would maintain historic pattern

Guidance could disappoint: Beginning 2001 when Infosys gave its guidance for the first time (for FY02), its guidance has disappointed in every alternate year, and we see chances of the trend continuing this year.

If guidance disappoints, stock typically reacts sharply: As in 2001 and 2003, the stock price typically gets shaved off sharply, if guidance disappoints.

Table 1: Infosys Price Movement History Before And After Guidance

Guidance Day	Before		After		Comment
	1 Wk	1 Mon	1 Wk	1 Mon	
10-Apr-01	-5.30%	-20.00%	-20.90%	-0.40%	Guidance disappointed

Why US economy outlook may be a concern

Mixed US economic data

Our North American economist David Rosenberg writes in his note (*"Dave's Top Ten", March, 23 2007*) that "the Fed is still concerned about core inflation remaining sticky, but at the same time they raised their doubts over the economic outlook. Gone was the January 31st reference to *"firmer economic growth"* – it has been supplanted with *"mixed"* indicators. The housing market no longer is viewed as enjoying *"some tentative signs of stabilization"* – the Fed has downgraded that view to *"the adjustment in the housing sector is ongoing"*. **In other words, the Fed is clearly less upbeat over its growth assessment, which must have been the root cause of the decision to move to a *de facto* neutral statement as far as interest rate risks were concerned – since it is also obvious that the central bank is predominantly concerned about the inflation landscape."**

Dave also writes "Alan Greenspan mused earlier this month that we could see a recession by year-end (a *"possibility"*, not a *"probability"*). "

US software spending is high relative to historical levels

Following disappointing 4Q06 pre-announcements from a handful of software companies, weaker than expected results from Oracle and SAP, and the recent downward revision to 4Q06 GDP (3.5% advance to 2.2% prelim), our US software analyst Kash Rangan and his colleagues analyzed aggregate US software spending from the BEA (Bureau of Economic Analysis).

The data indicates that US software spending is at high levels relative to historical norms and does not have enough cushion if we get spending headwinds.

Software spending, as defined by the Bureau of Economic Analysis, includes prepackaged software, custom developed software and software developed internally.

Contrary to popular belief, US software spending has eclipsed Y2K and Internet "bubble" levels. However, annualized growth of nominal software spending has slowed from 13.6% in 1Q06 to 7.2% in 4Q06, slightly below its 10-year average annualized growth rate of 8.8%.

Nominal IT spending reached \$487.9bn, down from \$489.6bn in 3Q06, or an annualized decline of 1.4%. IT spending has surpassed levels reached during the height of the internet "bubble".

Chart 1: Nominal IT Spending

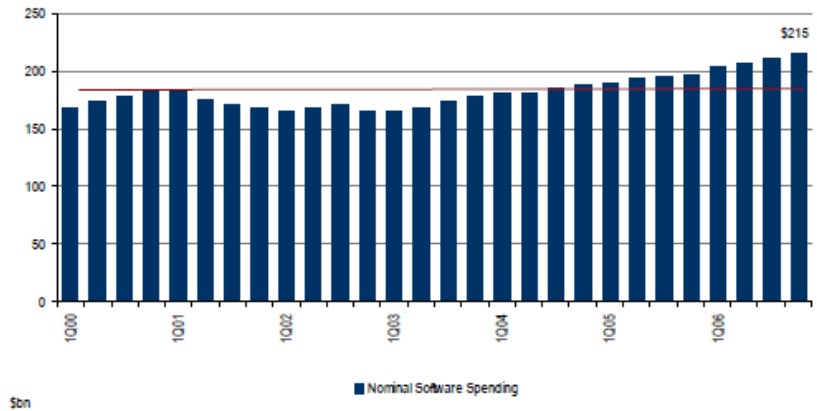

Note: Excludes government investment

Source: Bureau of Economic Analysis, US Department of Commerce; Merrill Lynch

Nominal software spending in 4Q06 reached \$214.6bn, maintaining its upward trend. Despite slowing to an annualized growth rate of 7.2% in 4Q06, down from 7.3% in 3Q06, software spending is still above previous highs reached in 2000.

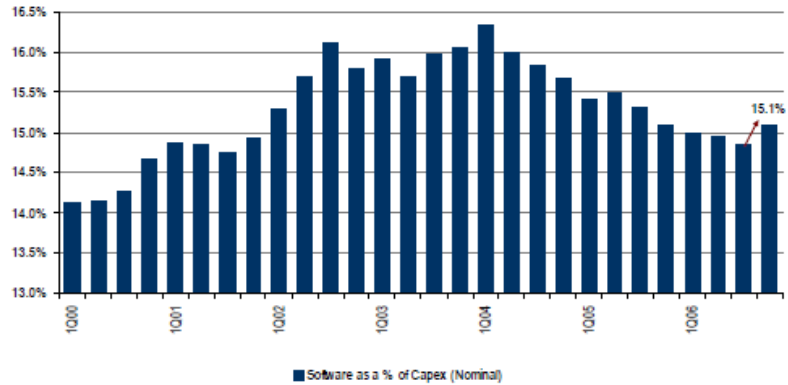

Chart 2: Nominal software spending

Note: Excludes government investment
 Source: Bureau of Economic Analysis, US Department of Commerce; Merrill Lynch

In 4Q06 nominal dollars, software spending as a percentage of Capex increased to 15.1%, up from 14.8% in 3Q06. Software as a percentage of Capex reversed a strong downward trend which began in 1Q05, following a multi-year high in 1Q04.

Chart 3: Nominal software spending as a % of capex

Note: Excludes government investment
 Source: Bureau of Economic Analysis, US Department of Commerce; Merrill Lynch

The Rupee rampage

Rupee/USD has appreciated by 1.7% this quarter, with appreciation of 2% in 2 weeks. This has been likely the result of the central bank abstaining from steadying the Rupee in a likely bid to manage rising inflationary pressures. If we assume a 1.6% higher average Re rate (taking Mar31 Rs/USD of Rs42), it would hit margins by 80bps.

Chart 4: Appreciating rupee

Source: Bloomberg for currency conversion rates

Uncertainty in a few key clients could rein in guidance

We believe there could be uncertainty in growth prospects of a few key existing or potential clients, e.g. ABN Amro (in potential merger talks), BT Global (post its deal with Tech Mahindra) and in banks with mortgage exposure. We note that maybe not even 10% of revs are at risk, but this could cloud visibility and hence impact guidance.

The FY06 guidance was below expected because of a couple of large client issues and FY07 was better than expected due to high growth visibility from large clients like ABN Amro and BT.

Table 4: Top 10 clients have led FY07 company growth

	Mar FY05	JunFY06	SepFY06	DecFY06	Mar FY06	Jun FY07	Sep FY07	Dec FY07
Co growth	6%	4%	11%	10%	4%	15%	14%	6%
Top 10 clients	12%	-2%	7%	8%	7%	17%	19%	0%
Non top 10 clients	3%	7%	13%	11%	2%	14%	12%	9%

Source: Infosys

ESOP dilution

We also expect ~2% EPS dilution on ESOPs exercised before Mar 31, FY07 to beat the proposed Fringe Benefit Tax. The FY08 Finance Bill has proposed that Fringe Benefit tax be paid by companies on the difference between exercise price and fair value, presumably market price at time of exercise, at likely the corporate tax rate of 34%. While the industry is hopeful that the Finance Minister may finalize a lower tax rate for the Fringe Benefit, they have not taken chances and have advised employees to exercise their options before March 31st.

However, retain our Buy on structural story being intact

However, we retain our Buy rating, given no change in the structural offshoring story and no signs of demand slowdown, either anecdotally from industry sources or from comments by competitors like Accenture. Thereby, though we see a 3% to 5% downside risk to our estimates, we believe a strong 25% kind of growth is achievable.

In results announced this week, Accenture CEO Bill Green described the consulting biz as “on fire” and demand not slowing down in the near term. Consulting bookings of \$3.08bn (58%) were at an all-time high on the strength of mostly SI projects in Europe and management consulting. Our US Computer Services analyst Greg Smith comments on Accenture post results (*“Consulting stays hot; tax rate helps guidance”, March 28, 2007*) that “The company will continue its strategy to focus on investing in consulting, where the globalization driven market opportunity has been good. The company will invest in industry assets and offerings, and scale up global skills and footprint by increasing headcount (Philippines now at 11,000 vs. 8,500 last quarter). Accenture plans to double its headcount in management consulting (currently at 13,000). Pricing power continues and should spread to other high demand areas such as technology, systems integration, and management consulting. Last quarter, pricing increases on projects in SAP implementation and supply chain helped offset salary increases. The company is seeing strength in EMEA and AsiaPac regions (specifically the U.K., Australia, and Japan) as well as in Financial Services (banking and insurance, CRM, and asset-based projects), Products (BPO, HR, learning), and Resources segments.

As we go into results, we prefer TCS. We expect ~7% qoq 4QFY07 PAT growth in TCS (TACSF; C-1-7, Rs1247) due to margin expansion. Further, TCS may be able to weather the impact of Rupee appreciation and pricing pressure better, given scope to increase offshore revenue proportion by 300 to 400bps to about 45%.

Price Objective Basis & Risk

Infosys

Our 1-yr target PO of Rs2,650 on the local is at 24x rolling forward EPS (12m ending Dec08), in line with the 3-yr average PE. Our ADR PE of US\$67 is at 10% premium to the local, lower than the current premium of 16%.

Key risks are a) Growing competition from western systems integrators like Accenture, b) Ability to manage growth, c) Industry-wide risks of a slowdown in the US economy, higher than expected wage pressures, and Rupee/USD appreciation.

TCS

Our Rs1,600 PO for TCS is set at 23x 1-yr rolling forward EPS. This is at a 5% discount to our target multiple for Infosys at 24x and lower than TCS' current 1yr forward PE of 26x. At our target price TCS would trade at 21x FY09E vs Infosys at 23x FY09E.

Risks: a) possible risks to margins from large deals, b) the ability to manage growth, c) lower wages than peers onsite, d) growing competition from western systems integrators like Accenture, e) Industry-wide risks of a slowdown in the US economy, higher than expected wage pressures, and Rupee/USD appreciation.
