Economy: Case for an early 'exit' becomes stronger with IIP growth in full throttle

## News Round-up

- Larsen \& Toubro Ltd (L\&T) has bagged a Rs 6,897-crore contract from Maharashtra State Power Generation Co Ltd (Mahagenco) for three 660 MW super-critical Boiler Turbine Generator (BTG) units. (BS)
- In other news, L\&T is likely to raise over Rs 300 crore by selling one-third of its stake in Mahindra Satyam by Friday morning. (ET)
- Tata Steel, the world's eighth largest steel maker by output, has approved an exchange offer for an existing $\$ 875$ million of securities into foreign currency convertible bonds (FCCBs), in a move to reduce costs and ease repayment. The move gives an option to extend the repayment schedule by two years. (BS)
- India's second-biggest software exporter Infosys Technologies on Thursday acquired the US-based back-office firm McCamish Systems for around US\$38 million in order to tap into over US\$5-billion insurance services market in the country. (ET)
- Delhi-based Pramod Jain, who describes himself as a serial investor and has interests in telecom and real estate, has launched a hostile takeover bid for Sanjay Dalmia's Golden Tobacco (GTL), saying that he wants to prevent a stripping of assets, and sparking a scramble for the stock. (Mint)
- The RBI on Thursday proposed to allow importers and exporters to write and sell "put" options both in foreign currency-rupee and cross-currencies and earn premium on them. (Mint)

[^0][^1]REFER TO THE END OF THIS MATERIAL.

Infinite possibilities. We note that GSPL's valuation will vary widely depending on assumptions for transmission tariffs. GSPL stock is discounting a transmission tariff of RsO.55/cu m in perpetuity, which may look low versus its current tariffs (Rs0.89/cu m in 2QFY10). However, the implied tariff results in average CROCl of $21 \%$ in perpetuity. This is well above the likely CROCI possible under the new regulatory regime, which restricts post-tax ROCE to $12 \%$. We recommend investors book profits in the stock.

Infinite possibilities but be wary of the risks attached
Exhibit 1 gives the valuation of GSPL stock under different tariff assumptions. We note that the valuation of the stock can vary from Rs46 (based on tariffs resulting in 14\% CROCI) to Rs181 (assuming 2QFY10 tariffs in perpetuity). However, we would advocate investors to focus on the corresponding CROCI at different tariff assumptions and resultant valuations. A fair valuation of Rs95 results in an average CROCI of $21 \%$ over FY2011-20E, which seems very high for a gas transmission company. We doubt a rational regulatory framework will allow a gas transmission company to earn such super-normal profits in perpetuity. Current regulations permit 12\% post-tax or $18.18 \%$ pre-tax returns on capital employed.

Appreciation of $79 \%$ in the past four months is a fabulous return; book it
GSPL stock has rallied $79 \%$ since July 1, 2009 versus the BSE-30 Index's 14\% rise over the same period. We believe this a fabulous performance and would advice investors take advantage of the gratuitous increase in stock price and book profits. The stock is currently trading at 3.3X FY2010E book value and 1.7X FY2010E gross cash invested (GCI). We find this expensive for a gas transmission company, which will earn regulated returns. Our reverse valuation exercise suggests that the current stock price is implying an average tariff of Rs0.55/cu m resulting in CROCI of $21 \%$ in perpetuity.

Valuing the stock is an academic exercise pending clarity on regulations
We maintain our REDUCE rating on the stock with a 12-month DCF-based target price of 95 . However, valuing the stock is an academic plug-and-play exercise pending clarity on regulations and likely tariffs. As highlighted above, the fair value of the stock could swing meaningfully depending on tariff assumptions. We see significant risks to our earnings assumption arising from (1) lower-than-expected volumes and (2) lower-than expected tariffs. Exhibit 2 gives our key assumptions underlying our earnings model. We are unsure about the impact of new regulations for gas transportation pipelines on GSPL's tariffs (and earnings/cash flows) but are fairly sure that a strict application of the same will result in meaningfully lower tariffs versus our assumptions.

NOVEMBER 13, 2009

## UPDATE

Coverage view: Cautious
Price (Rs): 91
Target price (Rs): 95
BSE-30: 16,696

## QUICK NUMBERS

- Stock trading at 3.3X FY2010E book value and 1.7X FY2010E GCI
- Outperformed Sensex by $65 \%$ since July 1, 2009

## A simple cross-check may help

We note that our tariff and volume assumptions for FY2012E result in EBIT of Rs12.2 bn. We believe this is well above the likely EBIT possible under the new regulatory framework of $12 \%$ post-tax return on capital employed (EBIT X (1-t)/capital employed) or 18.2\% pre-tax return on capital employed (EBIT/capital employed). We compute that18.2\% pretax return on 'capital employed' (gross fixed assets and net working) of Rs44 bn will result in EBIT of Rs8 bn. Assuming depreciation of 4\% per annum on pipeline life of 25 years, GSPL's 'regulated' EBIT would be even lower.

We see significant downside risks to GSPL's valuation from lower transmission tariffs GSPL stock valuation and CROCI at various levels of average transmission tariff

| Average tariff | Valuation | CROCI | ROCE |  |
| :---: | :---: | :---: | :---: | :---: |

## Media

HIT or miss-government approves Headend-in-the-Sky (HITS) policy. We find the approval of Headend-in-the-Sky policy guidelines by the Government of India to be positive for large all-India MSOs as it would preclude the need to maintain digital headends in each city. However, the guidelines may have come in a tad late with digital expansion plans of most MSOs already halfway through. We find limited impact on DTH since it is already competing with digital cable in most large urban areas.

Headend-in-the-Sky (HITS) policy—HIT or miss

- The salient features of the HITS policy approved by the Government of India are—(1) HITS to be allowed in both 'C-band' and 'Ku-band' transmission obviating the waiting period given the scarcity of transponders, (2) total foreign investment (direct and indirect) including FDI allowed upto $74 \%$, similar to telecom, (3) continuation of cross-media holding restrictions of $20 \%$ among the various segments of the broadcasting services and (4) HITS operators not allowed to target subscribers directly but through the distribution network of an LCO (local cable operator). The detailed policy document release is awaited.
- We find that the national footprint of HITS will be cost effective for large MSOs (multi-system operators) eliminating the need to setup expensive digital terrestrial head-ends in each city. Also, the all-India digital network expansion can be completed in a much shorter timeframe. However, we highlight that most large MSOs have extant digital presence in key cities of India (see Exhibit 1) as they could not wait for the long-awaited government approval given competition from DTH. Also, HITS versus terrestrial digital head-ends is a classic 'opex versus capex' trade-off with the need for annual operating expenses on transponders in the former. Thus, the HITS policy may have come in a tad later in the day for most large MSOs.

Impact on DTH industry—minimal, if at all

- We highlight that DTH has stolen a march over cable as regards the digital television services in the country (see Exhibit 2); the number of DTH subscribers in India is likely to increase to 27 mn by end-FY2012E versus around 6.5 ,m digital subscribers. As discussed, DTH platforms are already competing against digital cable in most large urban areas.
- The positives for the DTH industry from the approval to HITS policy are largely on account of two factors-(1) increased likelihood of revision in foreign investment guidelines for DTH (49\% foreign investment allowed currently), (2) likely acceleration in decision-making post the formation of the new government, which will help in quick resolution of critical issues pertaining to license fees, taxation and content costs.

Estimation of digital TV HHs in India, March fiscal year-ends, 2007-2015E (mn)

Source: Industry data, Kotak Institutional Equities

HITS may drive consolidation and cable expansion in semi-urban areas. HITS service provides a national footprint to large all-India MSOs to drive their digital cable expansion in multiple cities and geographic areas without the need for setting up expensive digital head-ends in multiple cities. The HITS policy guidelines may have come in a tad later in the day with most large all-India MSOs already halfway through their digital cable expansion through digital terrestrial head-ends (sunk cost now). However, HITS does provide an opportunity for some MSOs that are at the initial stage of their digital expansion (listed players WWIL and HVL) to drive digital penetration not only in their existing areas of operations but also new markets such as semi-urban areas, which are not easily accessible by cable. We highlight that cable is still the dominant television platform in India (see Exhibit 3) and HITS provides another avenue for MSOs to compete effectively against the new entrants, DTH.

Cable versus DTH penetration in India and its Asian peers, 2008 (\%)

Source: Media Partners Asia, Kotak Institutional Equities

Conditional Access System (CAS) would expand the scope for value creation but government does not appear to be keen. The introduction of HITS services will help lower the cost of operations of digital cable services and improve the economics of scale thus resulting in savings for the MSOs as well as quick expansion of services across the country. However, the requirement that HITS operator cannot target the consumer directly but needs to go through the LCO network does nothing to change the fundamental problem of lack of addressability. Currently, LCOs appropriate a large portion of subscription revenues (see Exhibit 4) leaving a very small share for the MSOs. An addressable system (CAS) would improve transparency of subscription revenues but the government does not appear to be in favor of mandatory rollout. Voluntary CAS, delivered on a scalable digital platform like HITS, will still result in improved financials but at a much lower pace versus mandatory CAS.

Share of revenues of various cable players under different scenarios (Rs)

Source: Industry data, Kotak Institutional Equities

Limited impact on Dish TV; we focus on more substantive issues. The nascent DTH industry in India and Dish TV have done well against the digital cable services of incumbent MSOs in key urban markets and the entry of the HITS platform will likely have only a marginal negative incremental impact. The positives coming from the HITS policy announcement stem from likely higher foreign investment (including FDI) limits for the DTH industry (currently 49\%) given level playing field with HITS and Telecom (74\% FII/FDI limit). However, we do not believe Dish TV derives significant benefit from the former since it has funding in place with its recently concluded rights issue. Another positive from the HITS policy approval may be the indication of quicker policy decisions on key issues such as license fees, taxation and content costs; we have already factored in 6\% license fees (10\% currently) for Dish TV from FY2012E. We retain our cautious view on Dish TV (12-month DCF-based target price of Rs37) given some substantive market (as opposed to regulatory) issues.

- ARPUs. Dish TV reported relatively weak 2QFY10 ARPU of Rs139 (Rs142 in 1QFY10) versus our expectation of modest growth in (Rs144 in 2QFY10E). We highlight the inability of DTH operators to increase ARPUs given strong intra-segment and intersegment (analog cable) competition as the key overhang on Dish TV stock.
- Churn. We highlight that Dish TV has substantial subscriber acquisition costs (Rs2,5002.700 in recent times) due to the subsidy on STBs and various schemes on offer to attract new consumers to its DTH service. The loss of subscribers to new DTH players or to cable has implications on Dish TV valuation.
- Competition. Te competitive intensity in the DTH market is high with six players competing against one another (Videocon D2H+ is the latest entrant). The cable MSOs are also beefing up their services with the introduction of digital cable and broadband (dual-play) in their service offering.
- Valuations not attractive. Given the emerging nature of the DTH industry, limited visibility on ARPUs and churn with high competitive intensity, we believe Dish TV is trading at significant premium valuations. The recent experience of telecom has demonstrated (1) the price sensitive nature of the Indian subscriber and (2) low value of the Indian subscriber given low ARPUs.

Summary financials of Dish TV, March fiscal year-ends, 2007-2012E (Rs mn)

## QUICK NUMBERS

- IIP growth at 8.9\% during June-Sep.'09
- We expect IIP growth $\geq 10 \%$ in 3QFY10E
- Inflation at 8.0\% by end-FY10E and GFD/GDP $\geq 7.0 \%$ in FY2010E may prompt early 'exit'

Dr. Mridul Saggar
mridul.saggar@kotak.com
Mumbai: +91-22-6634-1245

IIP growth surprise turns even bigger in September
A V-shaped recovery in India's industrial economy is now a reality. IIP growth has been surprising on the upside since June 2009. It surprised once again clocking $9.1 \%$ yoy growth against a consensus of $7 \%$ and about a percentage higher than the best estimate. IIP growth has now:

- Averaged $6.5 \%$ in 1 HFY 10 versus $5.5 \%$ in 1 HFY 09 and $0.6 \%$ in 2 HFY 09
- Averaged 8.9\% during last four months (June-September 2009).

On a 4-m MA basis, the increase in growth to 8.9\% from $0.3 \%$ at end-FY2009 indicates a V-shaped industrial recovery (see Exhibit 1 and 2).

[^3]
## Growth headed for double digits in the near term

We see further acceleration in IIP growth in the near term, even though on a sequential basis growth may taper off as the output levels have already recovered to normal levels in our view. As such, we see:

- IIP growth exceeding 10\% 3QFY10E
- In spite of electricity decelerating sharply/stagnating in October, we see the possibility of strong manufacturing growth (likely at well above 10\%) to drive overall IIP growth above 10\% in October 2009
- We see FY2010E IIP growth at 8.5\% or more, even with the possibility of slight moderation in IIP growth numbers in 4QFY10E on weaker private consumption demand

## Growth surprises may prompt an early exit

An early withdrawal of fiscal stimulus, inter alia, through:

- CENVAT tax cut roll-back in FY2011 budget, if not in 3QFY10, now looks a certainty. We see the possibility of a surprise roll-back of 2-ppt in the CENVAT rates in endDecember itself. CENVAT was cut to $6 \%$ from $12 \%$ as part of the fiscal stimulus
- Possible CRR hike of 50 bps in December 2009 if strong capital flows on back of large IPOs, QIPs and disinvestments require dollar buying by RBI to prevent a sharp appreciation in the rupee
- Rate hikes in CY2010, along with more CRR hikes

See our Economy notes of October 27, 2009, 'RBI nudges a bit more firmly, starts exiting accommodation'. Though concerns about low credit off-take may generate debate and strengthen arguments for delaying exit, we feel that on balance of considerations, the decision may be tilted in favor of an early exit on the following three grounds:
(1) Sharp rise in price level in 1 HFY 10 , followed with sharp expected rise in inflation in 2HFY10 may prompt policymakers to give more weight to inflation than growth. We continue to expect WPI inflation to touch 8\% by end-March 2010.
(2) Expected strong capital inflows, requiring active liquidity management to suck off some of the surplus liquidity, especially if dollar buying interventions in FX-markets become necessary.
(3) Strong likelihood that GOI is unable to meet the budgeted GFD/GDP ratio of $6.8 \%$ in FY2010BE, leaving a choice between early partial roll-back of CENVAT tax cuts or resort to moderate extra-market borrowing once again in February and March 2010. The latter may lead to interest rates firming up.

IIP internals suggest pick-up in investment demand
September IIP gives a strong indication that investment demand is picking up in addition to strong consumption demand for durables (see Exhibit 3).

Exhibit 3: Capital goods add to consumer durables-lead recovery in FY2010; consumer non-durables disappoint Use-based classification of IIP growth, March fiscal year-ends, 2008-2010 (\%)

Source: Central Statistical Organization, compiled by Kotak Institutional Equities

- Capital goods output jumped $31.3 \%$ mom and $12.8 \%$ yoy, touching an 18-month high.
- Consumer durables continued to outperform, with $12.9 \%$ mom and $22.2 \%$ yoy growth.

However, some slack remains in basic and intermediate goods that declined by about 3.0\% mom. Consumer non-durables continued to disappoint with $3.1 \%$ contraction mom on the back of agro-based industries getting adversely impacted due to Kharif output losses.

## Risks to growth remain from core sector woes, easing of private demand

In our assessment, though the probability of IIP growth of 8.5\% or more in FY2010E is high, risks to our estimate remain from (1) poor performance of the core sector, (2) possibility that private consumption demand may soften in 4QFY10 as demand stimulus policies may be reversed and (3) continued weak external demand, with very slow improvement in global trade.

Growth in the core sector has been dismal in case of crude oil, refinery products, electricity and steel due largely to supply-side constraints (see Exhibit 4).

Exhibit 4: Core infrastructure industries shows continue to disappoint
Sector-wise growth rates in production for six infrastructure industries, March fiscal year-ends, 2009-2010 (\%)

Other definitions
Coverage view. The coverage view represents each analyst's overall fundamental outlook on the Sector. The coverage view will consist of one of the following designations: Attractive (A), Neutral (N), Cautious (C).

## Other ratings/identifiers

$\mathbf{N R}=$ Not Rated. The investment rating and target price, if any, have been suspended temporarily. Such suspension is in compliance with applicable regulation(s) and/or Kotak Securities policies in circumstances when Kotak Securities or its affiliates is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.
$\mathbf{C S}=$ Coverage Suspended. Kotak Securities has suspended coverage of this company.
NC = Not Covered. Kotak Securities does not cover this company.
RS = Rating Suspended. Kotak Securities Research has suspended the investment rating and price target, if any, for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon.
NA = Not Available or Not Applicable. The information is not available for display or is not applicable.
$\mathbf{N M}=$ Not Meaningful. The information is not meaningful and is therefore excluded.

## Copyright 2009 Kotak Institutional Equities (Kotak Securities Limited). All rights reserved.

Kotak Securities Limited and its affiliates are a full-service, integrated investment banking, investment management, brokerage and financing group. We along with our affiliates are leading underwriter of securities and participants in virtually all securities trading markets in India. We and our affiliates have investment banking and other business relationships with a significant percentage of the companies covered by our Investment Research Department. Our research professionals provide important input into our investment banking and other business selection processes. Investors should assume that Kotak Securities Limited and/or its affiliates are seeking or will seek investment banking or other business from the company or companies that are the subject of this material and that the research professionals who were involved in preparing this material may participate in the solicitation of such business. Our research professionals are paid in part based on the profitability of Kotak Securities Limited, which include earnings from investment banking and other business. Kotak Securities Limited generally prohibits its analysts, persons reporting to analysts, and members of their households from maintaining a financial interest in the securities or derivatives of any companies that the analysts cover. Additionally, Kotak Securities Limited generally prohibits its analysts and persons reporting to analysts from serving as an officer, director, or advisory board member of any companies that the analysts cover. Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed herein, and our proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein. In reviewing these materials, you should be aware that any or all of the foregoing, among other things, may give rise to real or potential conflicts of interest. Additionally, other important information regarding our relationships with the company or companies that are the subject of this material is provided herein.

This material should not be construed as an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. We are not soliciting any action based on this material. It is for the general information of clients of Kotak Securities Limited. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Before acting on any advice or recommendation in this material, clients should consider whether it is suitable for their particular circumstances and, if necessary, seek professional advice. The price and value of the investments referred to in this material and the income from them may go down as well as up, and investors may realize losses on any investments. Past performance is not a guide for future performance, future returns are not guaranteed and a loss of original capital may occur. Kotak Securities Limited does not provide tax advise to its clients, and all investors are strongly advised to consult with their tax advisers regarding any potential investment.

Certain transactions -including those involving futures, options, and other derivatives as well as non-investment-grade securities - give rise to substantial risk and are not suitable for all investors. The material is based on information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied on as such. Opinions expressed are our current opinions as of the date appearing on this material only. We endeavor to update on a reasonable basis the information discussed in this material, but regulatory, compliance, or other reasons may prevent us from doing so. We and our affiliates, officers, directors, and employees, including persons involved in the preparation or issuance of this material, may from time to time have "long" or "short" positions in, act as principal in, and buy or sell the securities or derivatives thereof of companies mentioned herein. For the purpose of calculating whether Kotak Securities Limited and its affiliates holds beneficially owns or controls, including the right to vote for directors, $1 \%$ of more of the equity shares of the subject issuer of a research report, the holdings does not include accounts managed by Kotak Mahindra Mutual Fund.Kotak Securities Limited and its non US affiliates may, to the extent permissible under applicable laws, have acted on or used this research to the extent that it relates to non US issuers, prior to or immediately following its publication. Foreign currency denominated securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of or income derived from the investment. In addition, investors in securities such as ADRs, the value of which are influenced by foreign currencies affectively assume currency risk. In addition options involve risks and are not suitable for all investors. Please ensure that you have read and understood the current derivatives risk disclosure document before entering into any derivative transactions.

This report has not been prepared by Kotak Mahindra Inc. (KMInc). However KMInc has reviewed the report and, in so far as it includes current or historical information, it is believed to be reliable, although its accuracy and completeness cannot be guaranteed. Any reference to Kotak Securities Limited shall also be deemed to mean and include Kotak Mahindra Inc.
