## FMCG

## Rising input costs to dampen prospects

We expect our FMCG coverage universe to report sales growth of $17.9 \%$ YoY in Q3FY11, led largely by volumes. Operating margins, however, are projected to decline 40bps, as input costs have inched up and brand building expenses remain high due to strong competitive intensity in the sector. Adjusted PAT for our coverage universe is likely to grow by $14.8 \%$ YoY. We maintain our positive stance on ITC, Asian Paints, Dabur and Marico in staples and United Spirits (UNSP) and Radico Khaitan (RDCK) in the alcoholic beverages space. We have a SELL on Nestle, Emami, Colgate and GSK Consumer \& Healthcare.

Overall, we maintain our cautious view on the Indian FMCG sector as its rich valuations overshadow our optimism over the growth momentum in urban and rural spending. High valuation multiples, following the outperformance over the last two years, leave little scope for further upsides, in our view. Moreover, as price hikes lag input costs increases, gross margins in the sector will likely be pressurised. We advise buying on declines in strong business models and prefer large cap stocks. We recommend selling mid caps on further rallies as valuations appear heady and already factor in the strong growth.

Sales growth at $\mathbf{1 8 \%}$ YoY for the quarter: We expect sales growth of $17.9 \%$ YoY for our FMCG universe during the quarter, led by Godrej Consumer Products (GCPL), United Breweries (UBBL), Emami, Britannia and Nestle. GCPL is likely to report a $75.8 \%$ YoY increase in its topline mainly on account of inorganic growth driven by Godrej Household Products (GHPL) and other global acquisitions. Asian Paints, after a sluggish Q2, is expected to bounce back with a $20 \%$ growth, while Hindustan Unilever (HUL) is likely to report a $9.5 \%$ growth on higher volumes. ITC is set for a $17 \%$ growth in sales, with cigarette volumes likely to get back to the positive territory from this quarter.

Operating margins to decline YoY: The operating margin for our FMCG universe is likely to dip slightly by 40 bps YoY, allowing for EBITDA growth of $15.8 \%$ YoY. Most of the companies are likely to report a contraction in operating margins led by a gross margin decline, as input commodity costs have inched up. HUL is expected to report an 110bps decline in operating margins on account of higher A\&P expenses. We expect the sector to report an adjusted PAT growth of $14.8 \%$ for the quarter. UBBL, RDCK, GCPL and Nestle are projected to report strong PAT growth, whereas HUL's profits are likely to remain flat YoY.

Valuations near top end of historical bands: FMCG stocks are trading near the top-end of their historical valuation bands in terms of absolute P/E multiples. On a relative basis, the sector is trading above the long-term average premium to the market, though not at the top end. However, we expect market earnings growth to accelerate; this would lower the likelihood of sector outperformance.

## Coverage Profile

Recommendation interpretation

| Recommendation | Expected absolute returns (\%) over 12 months |
| :--- | :--- |
| Buy | More than $15 \%$ |
| Hold | Between $15 \%$ and $-5 \%$ |
| Sell | Less than $-5 \%$ |

Recommendation structure changed with effect from March 1, 2009

Expected absolute returns are based on share price at market close unless otherwise stated. Stock recommendations are based on absolute upside (downside) and have a 12 -month horizon. Our target price represents the fair value of the stock based upon the analyst's discretion. We note that future price fluctuations could lead to a temporary mismatch between upside/downside for a stock and our recommendation.
