News Roundup

Corporate

- Larsen & Toubro and Malaysia-based Scomi Engineering Bhd will together build the country's first monorail system in the city. The Rs2,460-crore order for a 19.54-km stretch has been awarded to the consortium by the Mumbai Metropolitan Region Development Authority. (BS)
- Bharat Forge Ltd and Alstom Ltd will form two joint venture companies for manufacturing equipment for power sector. One of the two joint ventures will take up manufacturing of core turbines and generators. Alstom will hold a majority stake of 51 per cent in this company, while Bharat Forge will hold 49 per cent. The second joint venture will be engaged in manufacturing the auxiliary units of the power plants. In this company the equity holding structure would be reversed and Bharat Forge will hold majority 51 per cent stake, while Alstom will be the minority partner with 49 per cent holding. (BS)
- Andhra Pradesh government has decided to include Reliance Gas
 Corporation, a subsidiary of Reliance Industries Limited, as a consortium partner in Krishna Godavari Gas Network Limited (KGGNL), a Special Purpose Vehicle for development of natural gas netweork in the state. (ET)
- The erstwhile pesticides marketing company of the United Phosphorus group, Uniphos Enterprises Ltd plans to use gains from a share transfer last week to start a real estate business, retire its debt or pay dividends. (Mint)
- Jet Airways has said that it has forged a frequent-flyer partnership with the United Airlines of the US to boost connectivity on the busy India-US sector. Under the arrangement, frequent fliers of both airlines would be able to earn and redeem points on the entire global network of the United Airlines, which operates over 3,200 flights a day to more than 200 US domestic and international destinations from its five hubs in the US. (Mint)

Hindustan Unilever : Value adjustments in key HPC categories inevitable

Manoj Menon : manoj.menon@kotak.com, +91-22-6749-3391 Aman Batra : aman.batra@kotak.com, +91-22-6634-1231

- Price cuts or value adjustments imminent in key HPC categories; just when is the question
- · Margin expansion in soaps unlikely, likely in detergents and personal products
- 'Amaze' marketing mix likely to undergo a review
- Retain target price of Rs245/share, reiterate REDUCE on relative valuations

The unabated cost-led price increases as well as grammage reductions over the last two years has likely resulted in consumers opting to cut down their use of detergents (resulting in longer-than-expected consumer purchase cycles). Channel sources indicate that HUL has recently introduced a LUP version of the 'Amaze' brand (to induce trials)—we believe the product will likely undergo a marketing mix review. The pricing for Amaze at 1.4X price premium to competition has likely resulted in consumer resistance. Margin expansion in soaps unlikely whereas it's likely in detergents and personal products. The sharp correction in input prices augurs well for availability of resources for demand activation. Sources suggest that ITC has significantly increased its promotional spends on soaps (in Andhra Pradesh for 'Vivel' brand). We model 18% earnings growth for HUL in CY2009E on the back of 120 bps expansion in EBITDA margins. We see revenue growth slowing down to 12% in CY2009E (from 18% in CY2008E) due to (1) higher base of CY2008 and (2) deceleration in volume growth to low single digits. At the current market price of Rs251/share, the stock trades at 24X CY2009E. Noting limited upside to our DCF-based one-year target price of Rs245/share and on a relative basis (24% upside in Sensex), we reiterate our REDUCE rating on the

Price adjustments (price cuts / price promotions) imminent in soaps and detergents; just when is the question

We believe that consumers have started rationalizing on the quantum of usage as well as opting for cheaper products in select categories. One of the reasons for the lesser-than-expected volume growth in 3QCY08 was the pack-size reductions effected by HUL in mass market detergents since 2006. Lower volume offtake imply that consumers have started rationalizing on the quantum of usage as the per unit prices are effectively higher. The unabated cost-led price increases as well as grammage reductions over the last two years has likely resulted in consumers opting to rationalize on quantum of usage resulting in longer-than-expected consumer purchase cycles.

'Amaze' brain food marketing mix likely to undergo a review

Channel sources indicate that the company has recently introduced a LUP version of the brand (to induce trials) after about 10 months of test launch in three south Indian states. We recall that in January 2008, HUL had launched a health drink under the 'Amaze' brand, a product under the functional food (brain food) platform targeted at children. We believe that the pricing for Amaze at 1.4X price premium to competition (Horlicks retails at about Rs120 for 500 gms) has likely resulted in consumer resistance.

Margin expansion in soaps unlikely..

The price of crude palm oil (key input for soaps) has corrected over 60% from the peak and is at a two-year low. We estimate CPO (and variants) to account for about 16% of HUL's input costs; a 10% correction in price adds 70 bps to EBITDA and 4% to EPS. However, significant margin expansion is unlikely as (1) industry volumes growth in low single digits, the chances of a price cut/price promotion to stimulate demand is high (2) likely increase in advertisement and promotion to block ITC's task of building personal care brands (3) higher margins in soaps can be channeled for cross-subsidizing demand activation in personal products category (4) early indications of consumer downtrading visible as the 15% soaps volume growth of Godrej Consumer in the recent quarter would suggest and (5) some part of cost benefit will likely be negated due to rupee depreciation. Moreover, sources indicate that ITC has increased the promotional spends in soaps category significantly (in Andhra Pradesh for 'Vivel' brand).

..whereas its likely in detergents and personal products

Our recent discussions with mid-sized detergent companies suggest uptrading from the unorganized segment resulting in high growth for branded players. We believe that players like HUL are well positioned to continue good growth in the category (over 15%). Smaller unorganized players have lost out in the last two years due to (1) implementation of VAT (because of the 'registered dealer' requirement under VAT regulations) (2) non-availability of key raw materials and (3) input inflation. However, we highlight that the risk of marginal players re-emerging is real if the correction in input costs sustains. However, the cost efficiency measures already implemented, moving away from pack-sizes will help companies manage margins to their advantage. 'Wheel', for example, and other brands in the low-end, have moved away from 500 gm and 1 kg pack-sizes to retail at various pack-size points of 340 gm, 630 gm etc. (though 500g and 1 kg packs of 'Wheel' detergent have been reintroduced in select geographies). Moreover, we believe that the pricing power in the personal products (PP) category is high and the 40% correction in HDPE prices augurs well for availability of resources (for demand activation).

The history of market shares losses for HUL in all key categories over a 1, 3 and 8 year horizon suggests that there is competition with significant market share ambitions and hence the ability for HUL to retain gains from cost comfort is limited.

HUL management reiterates that focus on market development will continue

In a recent meeting with HUL management, the company reiterated the focus on market development and growing the size of the market by driving increase in number of use-occasions. Growth in modern retail is seen as a key driver for the expansion of nascent categories like soups, cooking aids, ice creams etc. HUL will drive 'masstige' products with attributes of (1) product claims which are justifiable for the price charged and (2) products delivering functional value. According to the company, the paradigms are changing in key categories like skincare where the product is associated more (today) with grooming rather than beauty earlier.

HUL is planning to prototype a new formulation in soaps, about 10-15% of fatty matter to be replaced with starch

Sources indicate that HUL is planning to prototype a new formulation in soaps where 10-15% of fatty matter is to be replaced with starch. The company is setting up facilities at key soap manufacturing locations for the formulation change. Currently, the TFM (total fatty matter) in key soap brands of HUL (Lux, Lifebuoy, Hamam and Breeze and excluding Dove, Pears etc) range between 60% and 80%. We believe that HUL's new technology, if successful, can likely lead to dramatic cost reduction in soap making. Success will depend upon consumer acceptance. We estimate that complete success with this move will likely result in an incremental 5% boost to annual profit growth over the next two years. Our estimates currently exclude any margin expansion due to success with such technology initiatives. We remain cautious about the success of such ventures and highlight an earlier move in 2003 when 'Alphos' technology actually dented the brand equity of 'Breeze' soap.

Development of Foods category will be a slow accretive process

We believe that HUL is developing the foods business on four planks (1) child nutrition (2) adult nutrition (3) cooking aids and soups and (4) vitality-based snacking (salt free / sugar free etc). While we are excited about the niches which HUL is trying to build (for example, category captaincy for 'Knorr' brand in soups/cooking aids and healthfood under the brainfood platform without taking on malted health drinks directly), we highlight that it will be a slow accretive process which will likely bear fruit over 3-5 years.

Retain target price of Rs245/share, reiterate REDUCE

We model 18% earnings growth for HUL in CY09E on the back of 120 bps expansion in EBITDA margins. We see revenue growth slowing down to 12% in CY2009E (from 18% in CY2008E) due to (1) higher base of CY2008 and (2) deceleration in volume growth to low single digits. We note that yet-to-be-anniversaried price increases provide about 8% topline growth for CY2009E. We believe that holding on to the MRP in key categories is difficult from now on and competitive pressures warrant higher trade spends.

At the current market price of Rs251/share, the stock trades at 27X CY2008E and 24X CY2009E. Noting limited upside to our DCF-based one-year target price of Rs245/share and on a relative basis (24% upside in Sensex), we reiterate our REDUCE rating and advice clients to sell into strength. The stock has demonstrated excellent defensive characteristics and has delivered a relative return (vis-à-vis Sensex) of 13%, 27% and 52% over the past 1, 6 and 12 months, respectively. We believe that business fundamentals do not support a case for absolute stock performance from now on.

Over the past three and five years, the minimum, maximum and average P/E commanded by HUL stock was 22X, 41X, 28X and 19X, 41X, 27X, respectively. In the past one year, the stock has delivered absolute returns of 34% (30% stock return plus dividend yield) and the current relative premium to Sensex P/E is the highest in a decade at 150%. We believe that given the strong headwinds faced by HUL's business in CY09E, the stock will likely trade closer to the lower-end of trading band. At our target price of Rs245/share, the stock would trade at 23XCY09E.

However, visibility of earnings, good dividend yield (4%) and market leadership position makes HUL an excellent defensive stock to own in volatile times. Key upside risks to our estimates include (1) ability to channelize emerging cost comfort to below-the-line activities and attain higher volume growth, (2) effective price increases through pack-size reduction in HPC without significantly impacting product demand and (3) inability of ITC to gain significant market share in HPC categories.

History of consistent market share losses doesnot provide confidence in sustainable growth Changes in value market shares (bps)

Zee Entertainment Enterprises : Content producers versus union workers—trouble brewing in Hindi general entertainment

Amit Kumar : amit.ckumar@kotak.com, +91-22-6749-3392 Sanjeev Prasad : sanjeev.prasad@kotak.com, +91-22-6634-1229

- Content producers balk at 80-100% wage increase demanded by union workers
- No new programming for Hindi GE channels; broadcasters refuse to get involved
- Impact on Hindi GE broadcasters dependent on length of impasse, settlement
- Retain BUY on ZEEL; recommend buying on weakness due to this dispute

We expect the current stand-off between content producers and the union workers to have a modest impact on the ad revenues of Hindi GE channels as there will be no new programming on Hindi GE channels starting November 10, 2008. The broadcasters have noted that they are not a party to the wage negotiations and will pay producers based on previously contracted pricing. We believe the two sides, producers and workers, stand to lose significantly due to the freeze on new programming initiated by top seven Hindi GE broadcasters as a result of this dispute and thus, some settlement can be expected soon. We will wait for further developments on this issue before reviewing our earnings models of ZEEL. We retain our BUY rating on the stock with 12-month DCF-based target price of Rs205; any weakness in the stock due to the standoff may be a good buying opportunity. Key risks include further decline in ZTV/ZEEL ratings resulting in loss of ad revenues.

Producer-worker dispute to have modest impact on broadcasters. The Federation of Western India Cine Employees (FWICE) has started an agitation against all production houses, which provide content to Hindi general entertainment channels, demanding better wages and working hours for its members. This has adversely impacted the production of new content for Hindi GE channels; the top seven broadcasters (Star, Zee, Sony, Sahara, Colors, 9X and NDTV Imagine) have discontinued new programming on their channels starting November 10, 2008 and will telecast only repeat content till such time as the dispute is amicably resolved. This move will likely impact the ad revenues of ZEEL (see Exhibit 1) since repeat programming will not deliver the same TRP ratings as original content; However, the impact will likely be modest as this move forces producers and workers to come to the negotiation table, given significant loss of business, and quickly settle the dispute.

Workers' demands and its impact on production houses. The two key contentious issues between content producers and union workers are—(1) reduction in number of daily work hours to 8-10 hours from 12-16 hours currently and (2) 80-100% increase in hourly wages to compensate for the steep increase in cost of living (inflation) and reduced work time. Our analysis of the financials of Balaji Telefilms, the leading content provider to Hindi GE channels, reveals significant erosion in EBITDA margins if it completely agrees to the demands of the unions (see Exhibit 2) without any corresponding compensation from the broadcasters. We highlight that the broadcasters have already said that they are not a party to the dispute and will makes payments to content providers only on the basis on contracted pricing. The move by broadcasters to discontinue new programming forces the producers and unions to come the bargaining table.

Retain BUY on ZEEL given attractive valuations; any weakness due to said dispute may provide good entry point. As noted previously, we do not expect the dispute to continue for a very long time given the proactive action by broadcasters. Therefore, any short-term weakness in the stock due to negative news-flow as a result of the said dispute may provide an attractive entry point; we note that ZEEL is trading at 12.1X FY2010E EPS and 8.4X FY2010E EBITDA. However, we also highlight that the broadcasters may have to step-in to share the burden on the content producers in the event of a protracted dispute (more than 4-5 weeks). Exhibit 3 shows that a moderate increase in ZEEL's cost of programming to partially compensate content producers for the wage increase does not have a significant impact on valuation; a 6% increase in cost of programming, which translates into a 20% wage increase for workers, has a 7% impact on ZEEL's valuation.

Ratings update—Diwali and content disruptions impact performance. Exhibits 4 & 5 show the primetime TRP ratings and GRPs of various Hindi GE channels; we note the sharp decline in GRPs for the Hindi GE segment, most notably Star Plus and ZTV, in the most recent week due to (1) festive season and a long weekend and (2) disruptions in procurement of new programming as a result of the producer-worker dispute discussed above. We note that most channels had to telecast repeat programming for at least two days during the last week, which resulted in loss of viewership. Also, we highlight that Colors was an exception since its 7-days-a-week flagship show, *Big Boss*, remained out of the ambit of the programming freeze due to certain technical issues. In order for the situation to be fair to all broadcasters, Colors has agreed to cut the length of the show by one week and the program will now finish on November 22, 2008. Thus, we believe the TRP ratings this week to be an aberration and not indicative of long-term trends.

Impact of producer-worker dispute on financials of ZEEL

Length of delay due to dispute	Base	1 week	2 week	3 week	4 week
Normal ad revenue generated (Rs mn)	100	100	200	300	400
Revised ad revenue generated (Rs mn) (a)	100	50	100	150	200

Vishal Retail: Tough times call for tough measures

Ravi Agrawal: ravi.agrawal@kotak.com, +91-22-66341348

- Current market turbulence force strategic re-think, growth plans severely curtailed
- . Focus on improving balance sheet health and reducing inefficiencies
- Modelling in virtual stress-case scenario; earnings to grow at 14% CAGR over FY2008-11E
- Revise target price to Rs125 and retain ADD rating

Vishal Retail (VISH) has done a complete strategic review of its short term growth plans due to the current market turbulence. The company has deferred its planned QIP due to adverse equity market conditions and has also decided to focus on de-leveraging its balance sheet. The company has decided to curtail its growth plans and is now planning on the franchisee-based model for incremental growth. We endorse the management's strategy on improving its balance sheet, but also believe that the risks to growth have increased in this transition. We now model virtual stress-case scenarios (with marginal retail space addition) and expect Vishal's earnings to grow at 14% CAGR over FY08-11E (versus around 44% earlier). The stock is trading at 5X FY09E earnings and we retain our ADD rating.

Current market turbulence force strategic re-think

VISH has been forced by current market turbulence to do a complete strategic review o its business plans. The company has shelved its QIP plans in the short-term due to the adverse equity markets. It has also decided to drastically cut down on its new store additions and focus on de-leveraging its balance sheet. Incremental retail addition, in the next 12-15 months, will now come from franchisee-based stores rather than own stores. The company hopes that this will help it to reduce its capex and inventory requirements (which will be borne by the franchisee).

VISH expects to add around 0.2 mn sq. ft of incremental space from around 40-50 franchisee stores during 2HFY09. Most of these stores will be small-format (2,000-4,000 sq. ft size). More dramatic, VISH has decided to completely freeze its own store additions, with strong focus on reducing the high leverage on its balance sheet.

Focus on improving health of balance sheet at cost of growth

VISH's short term strategy is now focused on reducing its overall gross debt. As the company continued to rapidly expand its retail footprint (total retail space has increased to 3 mn sq. ft. currently from around 2.1 mn sq. ft at end FY2008), gross debt has sharply increased to around Rs8.1 bn (mainly working capital loans) at end of 2QFY09 from around Rs5.3 bn at end FY2008). As anticipated, this has led to very high leverage, with current debt-equity ratios of around 2.66 from around 1.9 at end FY2008.

VISH now plans to focus on reducing this leverage. One avenue is to reduce its retail space addition, which will incrementally reduce requirements for inventory and capex. It also has embarked on a process of vendor rationalization and now plans to purchase larger quantities from fewer vendors on credit. It's focus on inventory reduction is already bearing fruit. Excluding seasonal purchases (due to festival season in October), total inventory per sq. ft was Rs2,400 versus around Rs3,000 in the previous quarter. Moreover, it has also decided to reduce its total number of warehouses by 30% (total warehousing space was 1.1 mn sq. ft during 2QFY09).

We endorse management efforts in this direction. As highlighted in our previous notes, we have always believed that the key challenge to management growth plans would be funding for growth. Hence, we had always preferred to be more conservative in our estimates (our original estimates of 7 mn sq. ft of total retail space was 30% lower than management's estimates of 10 mn sq. ft). We believe that a temporary pause to growth is not necessarily a bad strategy for a company of Vishal's balance sheet size, and the resultant period can actually be utilized by Vishal to not only shore up its balance sheet but also to focus more on its private-label strategy and streamline procurement strategies.

Franchisee model has different set of challenges

A key element of Vishal's new strategy is the reliance on franchisees for incremental growth in retail space and sales. Vishal is currently already in talks for around 40-50 stores by end FY2009 with a total retail space addition of 0.2mn sq. ft. Under this model, the franchisee will be responsible for the land (including capex) maintain inventory on his books and be responsible for shrinkages. Vishal will be responsible for the merchandizing, advertising and the IT systems and would have to take into account for dead inventory. For this arrangement, the franchisee would get a percentage of sales as commissions. The commission rates will be based on sales targets. We estimate that Vishal will pay around 20% of sales as commissions.

We believe that the overall growth risks to the company has increased due to this transition and expect this policy to be a more temporary short-term measure than a continual policy in the firm. Historically, franchisees have proven to be extremely difficult to manage. EBTIDA margins will be lower with the franchisee model. Moreover, we believe that there could be issues in managing the branding and the coordinating the overall sales effort of the firm.

Change in estimates

Exhibit 1 highlights the key changes in our estimates, incorporating above mentioned changes.

- 1) Retail space addition. We reduce our total retail space addition to 4.1 mn sq. ft by FY2011E from around 7mn sq. ft earlier. This sharp reduction is based on absolute marginal increase in space addition in own stores (flat in 2HFY09 and 0.5 mn in the next two years) and around 0.6 mn sq. ft of franchisee stores. We recognize that the actual own-store ramp up in FY2011E could be higher, post rationalization of balance sheet but prefer to be conservative in our estimates.
- **2) Sales growth.** We reduce our sales estimates by 25% and 39% in FY2010E and FY2011E, partly as a response to the lower retail space addition. We highlight that we maintain our assumption of flat same-store-sales (SSS) growth in FY2009 and 5% growth p.a subsequently for own stores. We have assumed flat SSS for franchisee stores.
- **3) EBITDA margins to decline 130-170 bps.** EBITDA margins are expected to decline in FY2010-11E as the franchisee model will likely have lower margins than own stores. We expect EBITDA margins of 9-10% in the franchisee model versus around 11-12% in the own store segment.
- **4) Working capital positive and lower capex.** We expect working capital requirements to substantially reduce in FY2010-11E. We now expect working capital to be marginally positive from around Rs6 bn negative previously estimated for FY10/11E. Similarly, we drastically reduce our capex requirements to Rs1.2 bn in FY10/11E from around Rs5 bn earlier.
- **5) Interest costs to reduce due to lower debt levels:** We reduce our interest expense estimates by 27% and 47% in FY2010E and FY2011E respectively, as we now build in total gross debt of Rs6.2 bn and Rs5.6 bn in FY2010E and FY2011E against our earlier estimates of Rs11 bn and Rs15 bn of debt. Debt-equity ratios should likely reduce to 1.8 in FY2010E from around 2.66 currently.

Our new P/E based target price is Rs125 and we retain ADD rating

We set a new revised target price of Rs125 (Rs485 earlier) based on 6X FY2010E EPS. We highlight that the relative valuations are 60% lower than Pantaloon's, reflecting a very conservative scenario for Vishal's operations. While some conservatism maybe in order and we expect the street to wait for actual positive impact of balance sheet restructuring to flow in, we also highlight that the current earnings profile have extremely high visibility given that the expectation of retail space addition is virtually nil. Hence we believe the expected earnings actually represent a virtual stress-case scenario. The key risk here would be SSS growth, which at flat for FY09 (versus 7% achieved in 1HFY09) and 5% each for FY10E and FY11E, respectively, seems reasonable.

At current price, the stock is trading at 6X FY2009E earnings. We retain our ADD rating.

2QFY09 results review; Balance sheet issues gaining prominence

Puneet Jain: puneet.j@kotak.com, +91-22-6634 1255

Sandeep Reddy: sandeep.reddy@kotak.com, +91-22-6634-1216

- Consensus estimates revised downgrades sharply to adjust for low new launches
- Balance sheet tracker—Low level of operating cash flows, balance sheet leverage remains a concern
- Observe select new launches—DLF, IBREL launch a few projects
- Re-iterate BUY on DLF, IBREL and PHNX

Real estate companies under coverage universe for 2QFY09 showed 8.3% increase yoy in revenues and 3.4% decline yoy in PAT on an aggregate basis. EBITDA margins came down by 350bps yoy driven mainly by DLF. We believe operating cashflow, balance sheet leverage and number of new launches are the key quarterly parameters to track for real estate companies. DLF and HDIL started generating operating cashflow from 2QFY09, albeit in a small manner. We observe few project launches (mainly by DLF and IBREL) and would anticipate more activity on this front in 2HFY09. Balance sheet quality will likely remain of paramount importance in the current tight liquidity environment and would prefer companies which, (1) generate operating cash flows, (2) show progress on projects, and (3) have low leverage. We would reiterate our BUY rating on DLF, IBREL and PHNX.

Reiterate BUY on DLF, IBREL and PHNX

Exhibit 2 summarizes performance on nine companies in our coverage universe on various parameters like—(1) operating cash flow, (2) increase in debt, (3) new launches/project progress, (4) balance sheet comfort and (5) consensus EPS downgrades for FY2009E EPS. Based on these parameters, DLF had the best quarterly performance with positive operating cashflows, new launches and least consensus downgrades. IBREL stands out on balance sheet strength and management reaffirmed cash position of the company. We saw largest increase in debt levels (as proportion to total debt) in Unitech, Puravankara and Sobha. DLF, PHNX, HDIL and IBREL showed progress in terms of new launches or construction of key projects. Based on comparative quarterly performance we re-iterate BUY on DLF, IBREL and PHNX. Exhibit 3 gives comparative valuation for real estate companies.

Importance of quarterly results-indicates direction of NAV movement

We highlight that the quarterly results of real estate companies have been difficult to forecast and compare on account of various factors (1) revenue mix between commercial, vertical and residential, (2) uneven launch schedules, (3) different accounting policies, (4) land/FSI sales, and (5) geographical mix of revenues. As a result, EBIDTA margins of various companies have been very volatile. Therefore, it is important to observe trend of past few quarters vis-à-vis consensus expectations while reaching various conclusions. We note that continuous underperformance will indicate slower-than-expected monetization of land bank and hence this will result in NAV downgrades. For 2QFY09, we observe largest earnings downgrades in Unitech, Puravankara and Sobha Developers.

Exhibit 4 highlights the sharp downgrades in consensus estimates post 2QFY09 results. We observe sharper downgrades in FY2010E estimates as street adjusts their estimates for slower new launches going forward. DLF has seen the least revision in estimates and the consensus estimates an EPS of Rs48/share for FY2009E (versus our estimate of Rs44/share) and Rs53/share for FY2010E (versus our estimate of Rs47/share). We note that we are below consensus estimates for most companies. Most companies in our coverage companies have already achieved almost 50% of our FY2009E PAT, indicating limited downside risks to our estimates (Exhibit 5).

We observe selective new launches; pricing to be the key going forward

We list the project launches by companies.

DLF—During 2QFY09, DLF launched residential project in Kochi and New Gurgaon. DLF has pre-launched three projects in 2QFY09 and will formally launch these in 3QFY09—Hyderabad (Kompally), Gurgaon (Regal Towers) and Bangalore (Bannergatta road). Furthermore in 3QFY09, DLF will launch new projects in Delhi (SBM), Kasauli, Indore, Goa and Hyderabad. We like DLF's pricing strategy as DLF is launching projects after assessing the affordability of each market and would attribute successful launches to their strategy. DLF will likely be the largest beneficiary when interest rates decline on account of affordable prices and large geographical spread of projects.

Unitech—Launched Nirvana County in Kolkata.

Indiabulls Real Estate—Has soft launched apartments at Rs2,800/sq. ft in OMR, Chennai and plotted development at the rate of Rs8,000/sq. yard in Sonepat. Management indicated that they have leased 1.2 mn sq. ft at One Indiabulls Center, Mumbai at rates of Rs275/sq. ft/month.

HDIL—Construction work on Phase-I of airport slum rehabilitation is moving at a fast pace. HDIL sold 1.5 mn sq. ft of TDRs accruing from airport SRA project in 2QFY09. However, we note that progress on other projects of HDIL was slower-than-expected.

Sobha— Sobha had two new launches in 2QFY09—(1) 40 premium villas in the second phase of Sobha City in Thrissur, Kerala and (2) Sobha Scarlet in Mysore to be developed over 14.2 acres. We note that there were no new launches in Bangalore.

Puravankara—no new launches this quarter.

IVR Prime—no new launches this quarter.

Key balance sheet items—Leverage and receivables

Exhibit 6 shows the balance sheet of real estate companies in 2QFY09. We believe financing will likely remain a constraint for this sector and we would prefer companies with—(1) healthy balance sheet and (2) positive operating cash flows. We discuss company specific developments below.

DLF. DLF receivables have shown a sharp upward trend over the past four quarters. DLF's DAL debtors rose by Rs14.7 bn to Rs48 bn and non-DAL debtors increased by Rs8 bn. During 1HFY09, DAL debtors have increased by Rs30 bn while non-DAL debtors have declined by Rs10 bn. Therefore, DLF received customer inflows of Rs57 bn in 1HFY09. We think DAL financing will be difficult in the current macro environment and would closely monitor developments in this regard. DLF also generated operating cash flows of Rs7.5 bn 2QFY09 as it has slowed down on fresh land acquisitions and is concentrating on monetizing assets more rapidly. This has resulted in debt levels of DLF remaining stable at Rs146 bn at end-2QFY09 and cash balances of Rs12 bn.

Unitech. We would like to highlight that Unitech has a leveraged balance sheet with a D/E of 2.4X as of September 2008 (Debt: Rs100 bn, cash: Rs17 bn and net worth: Rs41 bn) and absolute debt levels have been rising for the past few quarters. We view recent steps taken by the management like raising funds for Mumbai project and sale of strategic stake to Telenor as positive. We expect Unitech to benefit from the Telenor deal as Unitech would receive Rs7.8 bn from Unitech Wireless, which could be used to retire debt.

Indiabulls Real Estate. The management reaffirmed that IBREL has a cash balance of Rs36.4 bn (Rs134/share) as of September 2008 post reversal of ICDs given to IBFSL (Indiabulls Financial Services) and repayment of OCDs issued to FIM.

HDIL. HDIL generated small operating cashflow of Rs186 mn in 2QFY09 as the airport slum rehabilitation project started contributing to revenues. We view this development as positive as HDIL has been investing heavily in land acquisition and this had resulted in D/E rising sharply to 1.0X in 1QFY09. We would watch operating cashflow and leverage ratios closely. At end-2QFY09, HDIL has debt of Rs39 bn, cash balances of Rs4 bn and D/E ratio of 0.9X.

Sobha. Sobha announced a rights issue of Rs3.5 bn which we believe is a positive development considering the highly levered balance sheet of Sobha (D/E of 1.9X as of Sep '08). However we would like to highlight that ROCE of Sobha has been on a declining trend for the past two years with ROCE dipping significantly to 13.3% in FY2008. We note that rights issue is unlikely to change capital efficiency of Sobha.

Puravankara. We highlight that PVKP's debt has increased to Rs8bn and hence D/E has increased to 0.6X from 0.5X in 1QFY09.

Phoenix Mills. PHNX saw qoq growth of 13% in operational income indicating rental re-pricing since no new facility became operational during the quarter. PHNX has received commitment from MPC synergy to invest Rs13 bn primarily into hotel projects and retail projects of its associates (EWDPL).

Real Estate Tracker: Signs of recovery

Puneet Jain: puneet.j@kotak.com, +91-22-6634 1255

Sandeep Reddy: sandeep.reddy@kotak.com, +91-22-6634-1216

Signs of recovery. BSE Real Estate index gained 18% in the past 1 week post RBI cut rates to ease liquidity concerns, after declining 34% in the previous 3 weeks. We observe large downgrades in consensus earning estimates post 2QFY09 results with least cuts in DLF. Private equity investments have declined considerably over the last few months. We see initial signs of correction in prices at the Mumbai property exhibition; however we think there is more to follow.

Highlights for the month ended Friday, November 7, 2008

- Top gainers/losers for the month: IBREL (20.2%), DLF (-7.4%), Unitech (-47.1 %), Puravankara (-59.1%)
- Unitech divested a 60% stake in its telecom venture for Rs61 bn to Telenor, a Norwegian telecom operator.
- Jaiprakash Associates (JAL) is planning to raise Rs20 bn through a rights issue to fund the Ganga expressway and a Formula One facility.
- Omaxe's long-term rating was reduced to grade A- and the outlook was cut to negative from stable by Fitch, citing the company's high debt level and liquidity concerns.

Key investments

 Orient Global invested Rs1.2 bn to buy stakes in HDIL and IBREL via the open market.

Key land deals/tenders

- No bidders for two plots in Wadala—7,029 sq. m and 4,034 sq. m at base prices of Rs2.4 bn and Rs1.35 bn, respectively.
- DLF Ltd was the sole bidder for an office plot in Mumbai offered by the state-run Indian Railways. RLDA has offered to lease a 45,300 sq. m plot for 80 years at a reserve price of Rs39.6 bn.

Key project announcements

- Indiabulls Real Estate—launched 'Indiabulls Green' in Sholinganallur at Rs2,700/sq. ft
- Tata Housing—announced the launch of Xylem, the country's forst green IT park in Bangalore.
- Sahara Prime City—launched 'Sahara City Homes' project in Coimbatore.
- Ansal Housing—launched a residential project, Ansal town, in Alwar in Rajasthan

Kotak Securities Limited and its affiliates are a full-service, integrated investment banking, investment management, brokerage and financing group. We along with our affiliates are leading underwriter of securities and participants in virtually all securities trading markets in India. We and our affiliates have investment banking and other business relationships with a significant percentage of the companies covered by our Investment Research Department. Our research professionals provide important input into our investment banking and other business selection processes. Investors should assume that Kotak Securities Limited and/or its affiliates are seeking or will seek investment banking or other business from the company or companies that are the subject of this material and that the research professionals who were involved in preparing this material may participate in the solicitation of such business. Our research professionals are paid in part based on the profitability of Kotak Securities Limited, which include earnings from investment banking and other business. Kotak Securities Limited generally prohibits its analysts, persons reporting to analysts, and members of their households from maintaining a financial interest in the securities or derivatives of any companies that the analysts cover. Additionally, Kotak Securities Limited generally prohibits its analysts and persons reporting to analysts from serving as an officer, director, or advisory board member of any companies that the analysts cover. Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed herein, and our proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein. In reviewing these materials, you should be aware that any or all of the foregoing, among other things, may give rise to real or potential conflicts of intere

This material should not be construed as an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. We are not soliciting any action based on this material. It is for the general information of clients of Kotak Securities Limited. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Before acting on any advice or recommendation in this material, clients should consider whether it is suitable for their particular circumstances and, if necessary, seek professional advice. The price and value of the investments referred to in this material and the income from them may go down as well as up, and investors may realize losses on any investments. Past performance is not a guide for future performance, future returns are not guaranteed and a loss of original capital may occur. Kotak Securities Limited does not provide tax advise to its clients, and all investors are strongly advised to consult with their tax advisers regarding any potential investment.

Certain transactions -including those involving futures, options, and other derivatives as well as non-investment-grade securities - give rise to substantial risk and are not suitable for all investors. The material is based on information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied on as such. Opinions expressed are our current opinions as of the date appearing on this material only. We endeavor to update on a reasonable basis the information discussed in this material, but regulatory, compliance, or other reasons may prevent us from doing so. We and our affiliates, officers, directors, and employees, including persons involved in the preparation or issuance of this material, may from time to time have "long" or "short" positions in, act as principal in, and buy or sell the securities or derivatives thereof of companies mentioned herein. For the purpose of calculating whether Kotak Securities Limited and its affiliates holds beneficially owns or controls, including the right to vote for directors, 1% of more of the equity shares of the subject issuer of a research report, the holdings does not include accounts managed by Kotak Mahindra Mutual Fund. Kotak Securities Limited and its non US affiliates may, to the extent permissible under applicable laws, have acted on or used this research to the extent that it relates to non US issuers, prior to or immediately following its publication. Foreign currency denominated securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of or income derived from the investment. In addition , investors in securities such as ADRs, the value of which are influenced by foreign currencies affectively assume currency risk. In addition options involve risks and are not suitable for all investors. Please ensure that you have read and understood the current derivatives risk disclosure document before entering into any derivative transactions.

This report has not been prepared by Kotak Mahindra Inc. (KMInc). However KMInc has reviewed the report and, in so far as it includes current or historical information, it is believed to be reliable, although its accuracy and completeness cannot be guaranteed. Any reference to Kotak Securities Limited shall also be deemed to mean and include Kotak Mahindra Inc.
