

Nuclear Weapons—Development, Detonation, Deterrence & Disarmament: A Bibliography

Patrick S. O'Donnell
Department of Philosophy
Santa Barbara City College (2013)

The categories in the title cover most and thus not all of the relevant literature about nuclear weapons collected here: for example, “non-proliferation,” biographies of scientists, and strategic decision-making are excluded (it would have ruined the alliteration!). In other words, rather more is included than is denoted by the title. While not exhaustive, the list aims to be comprehensive. At some point I hope to divide this into sections according to the categories (with an addition: ‘Miscellany’). As with all my compilations, I welcome suggestions—books, in English—for additional entries.
