Global Equity Strategist

Riding The Roller-Coaster

- Same movie The recent savaging of Emerging Market equities and bonds, selloff in commodities and rally in the US dollar feels very much like 2008.
- Bonds lead, commodities lag G4 government bond yields are beyond 2008-09 lows. Commodity markets look to be pricing in a more moderate downturn.
- Global equities derated hard Equity valuations have moved fast to price in a pre-Lehman EPS recession, if not yet a post-Lehman EPS collapse. Such low expectations should provide support in the face of inevitable earnings downgrades in our view.
- Front of roller-coaster Global equities lagged other assets in the 2008-09 recession and recovery. They are further advanced this time round. Rising government bond yields and falling gold may be the best indicators that the turn for equities is really here.
- Back of roller-coaster High yield and EM bond spreads are further away from their 2008 extremes. Within equities, cyclical/defensive valuations are also some way off.

Riding The Roller-Coaster

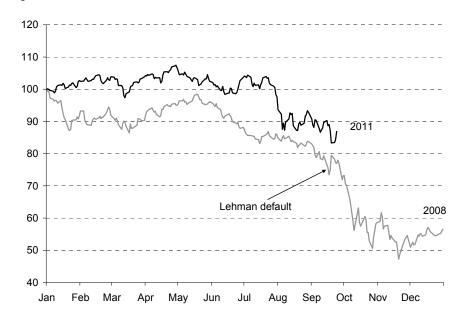

We compare the latest shifts in asset prices to the moves seen in 2008-09. We find that gold and core government bond yields are already at their extremes. Global equities may already be pricing in a "normal" (25%) EPS recession but not the 50% contraction seen after the Lehman default. Commodity prices, HY spreads and cyclical/defensive valuations look less pessimistic.

Inevitable Comparisons

2008's sell-off in the MSCI AC World benchmark split into two segments: a more orderly sell-off pre-Lehman (which defaulted on September 15th) and then an increasingly disorderly sell-off afterwards.

Figure 2 also shows the parallel progress of global equities in 2008 and 2011. A continuation would imply accelerating price falls over the rest of this year. Last week's sell-off made the similarities look even more alarming. A strong US dollar, weaker commodity prices and sharp sell-off in EM assets were all associated with the increasingly chaotic days after the Lehman default. Indeed Geoffrey Dennis, our Global EM strategist, noted that last Thursday EM equities suffered their worst day since November 2008.

Figure 2. MSCI AC World 2008 And 2011

Source: Citi Investment Research and Analysis, Datastream

Global EPS fell 55% in last bear market

In 2008, global stock prices had already declined by 20% before September 15th. Declines of this size have often been associated with a typical profits recession. The further fall in global equities after the Lehman collapse reflected the markets pricing in something even more serious. This was reflected in the eventual peak/trough 55% fall in global EPS, twice the average contraction.

Looks like 2008

The moves in markets last week reflect rising investor concerns about the global economy entering into another disorderly financial crisis and subsequent deep recession. Indeed, our economists are now forecasting a recession in the Euro Zone¹ if not (yet) in the rest of the world. Policy makers don't seem to be on top of unfolding sovereign debt issues. We've seen this (horror) movie before.

Asset Valuations

While recent price moves look increasingly similar to 2008, where have valuations got to? Are markets already there? Which asset class valuations are in 2008 crisis territory? Which are still some way away?

In Figure 3 we compare asset valuations now to the extremes they reached in the 2008/09 global financial crisis after the Lehman default. For bonds we look at yields (and spreads for HY and EM debt). For crude oil and copper our valuation measure is price relative to global nominal GDP. For equities we use P/BV (trailing) which provides a more stable comparison than volatile PEs.

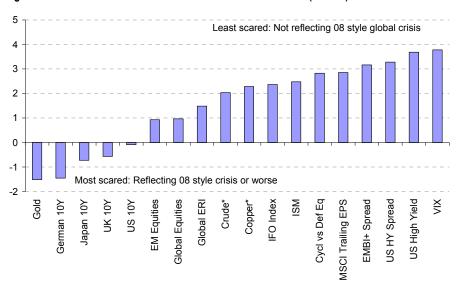

Figure 3. Current Valuations vs Global Financial Crisis Extremes (St. Dev)

Source: CIRA. *Crude oil and copper price relative to global nominal GDP. Global Cyclical sectors are Materials, Industrials, IT, Consumer Disc. Defensives are Consumer Staples, Health Care, Telcos, Utilities.

Gold, government bonds already extreme

The gold price seems to be most bearish on the world economic outlook. It is well through its 2008-09 extreme. Core government bond yields also seem to be very bearish (or bullish if you look at them from a price perspective). Valuations for G4 government bonds are now beyond the post-Lehman extremes they reached in 2008. For example German 10 year yields are 2.0%, almost 2 standard deviations below those lows. US HY valuations are still some way off 2008 extremes. Perhaps this is testament to better corporate balance sheets this time round, but we might expect equities to reflect better balance sheets as well.

¹ Euro Weekly: Debt Restructuring Better Early Than Late, 23 September 2011

Too late to buy core sovereigns?

The overall valuation of the global equity market has fallen sharply but it has yet to price in a post-Lehman crisis. Within global equities, cyclical versus defensive sector valuations seem to have lagged the broader derating of the asset class. EM bond spreads are still some way from the extremes in 2008/09.

We also rank some fundamental leading indicators: US ISM and German IFO business confidence, Citi's Earnings Revisions Index (ERI²). They lag the downward shift in equity valuations and are way behind the collapse in government bond yields.

This suggests that, at current prices, bears on the global economy would be better served selling HY or underweighting cyclicals against defensives than buying more government bonds. As an asset class, equities sit somewhere in between. We suspect that they are already pricing in a typical recession³ but not a post-Lehman financial collapse.

Global Equity Valuations

How do current valuations now look within the global equity market compared to 2008-09 lows? In Figure 4 we look at the percentage difference of price to book ratios now versus then for equity regions and global sectors.

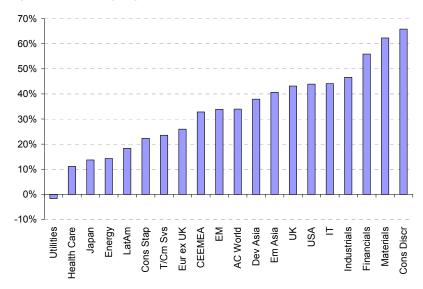

Figure 4. Global Equity Regions and Sector P/BV vs 2008/09 Extremes (%)

Source: Citi Investment Research and Analysis

Only Global Utilities valuations are below the extremes of 2008/09. This reflects the current woes of the German and Japanese stocks in particular. Elsewhere, valuations are still to reach the lows back then, especially amongst the global cyclical sectors. Equity investors who think that the government bond markets are right to be pricing in a post-Lehman economic outlook should be heavily Underweight these economically sensitive sectors right now in our view. They probably need to derate by another 30-40%. We believe at a regional level they should favour Japan and Europe ex-UK over the UK and US. Within EM they should favour LatAm and CEEMEA over Asia.

² Global Equity Strategist: High Frequency Earnings, 14 September 2011

³ Global Equity Strategist: August Sell-Off, First Thoughts, 9 August 2011

Global Financials

Global Financials valuations are still 50% above the troughs of 2009. So even the Financials are yet to price in a financial crisis. If we look at the Financials in each of the regions, we get a slightly mixed picture (Figure 5). Japanese Financials are at the valuations they reached in 2009 while those in LatAm are not that far away. Valuations fell to exceptionally low levels for the UK and US financials in 2008-09. This is why current valuations are currently double the levels back then. Investors obviously do not think these Financials will face the same issues as they did previously.

Figure 5. Financials PBV Now vs 09 Low

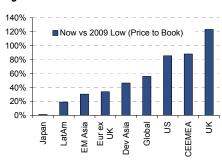

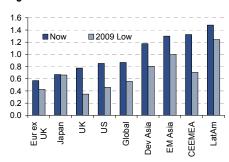

Figure 6. Financials PBV Now & 09 Low

Source: Citi Investment Research and Analysis

Source: Citi Investment Research and Analysis

Europe ex UK Financials P/BV still 30% above previous low

For Europe ex UK Financials current valuations are at 0.6x price to book which makes them the cheapest in the world right now (Figure 6). This is still about 30% higher than the lows of last time. But Europe ex UK Financials are now closer to pricing in a financial crisis than in the UK and US.

Pre-Lehman comparison

Figure 4 confirms that global equity valuations are not yet at post-Lehman levels. But that does not necessarily mean that they are complacent. Figure 7 shows current global equity valuations compared to pre-Lehman lows generally reached in early September 2008. This tells a very different story. Valuations are now well below these levels. The MSCI AC World index trades on a P/BV valuation of 1.6x, already 20% below the pre-Lehman low.

5% 0% -5% -10% -15% -20% -25% -30% -35% lealth Care Industrials AC World Materials Utilities CEEMEA Energy Dev Asia Eur ex UK

Figure 7. Global Sector And Region P/BV Now Versus 2008 Pre-Lehman Low (%)

Source: Citi Investment Research and Analysis

But pre-Lehman, underlying fundamentals were already worse than they are now. The classic lead indicators were falling towards contraction territory. The US ISM was 43.8 (currently 50.6). The German IFO was 96.1 (currently 107.5). Consensus analyst forecasts for 2008 global EPS growth had already fallen from 12.7% at the start of the year to 3.3% just before the Lehman collapse.

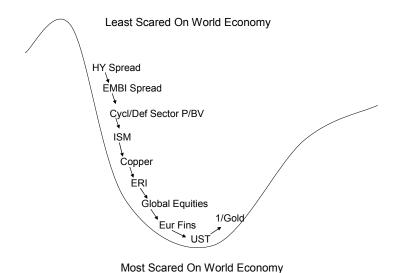

EPS downgrades to come, but plenty already in the price

Of course, bears would argue that this indicates corporate/analyst complacency and that there are significant profit downgrades to come. We agree. But Figure 7 suggests that global share prices are far from complacent. OK, they are not yet pricing in a post-Lehman crisis, but they are already pricing in something worse than a pre-Lehman recession. Perhaps just expecting a typical recessionary 25% contraction in global earnings (which probably would have occurred without the Lehman shock) may not be reason enough to be an aggressive seller from here. For that to be justified, a 50%+ contraction in global EPS would probably be needed. We are concerned about the global EPS outlook, but not that concerned.

The Roller-Coaster

Global financial markets seem to be on a downward roller-coaster ride (Figure 8). The front carriages (1/gold, US treasury/bund yields, European financial stocks) have been in free-fall for some time and are approaching or through valuation levels set in the last bear market. Others are not too far behind (global equities). Those carriages towards the back (credit spreads, cyclical vs defensive equities, commodities) are now picking up pace fast.

Figure 8. The Roller-Coaster: Asset Prices/Valuations Now Vs 2008/09

Source: Citi Investment Research and Analysis

This might help explain the apparently inexplicable behaviour of the gold price in the latest sell-off. Perhaps gold's shift from a negative to a positive correlation with risk assets reflects that it is the first carriage. It has gained the most as the asset roller-coaster tipped downwards, but will also be the first to head up the other side (ie fall in price terms). Government bond yields responded logically (they fell) in last week's risk sell-off, suggesting that they are still on the downward track. But they may be the next to rise up the other side.

The roller-coaster may be familiar from previous bear markets, but the order of the carriages can change. For example, Figure 9 ranks the same ten assets according to their post-Lehman extremes. The EM bond spread turned first, on 24 October 2008 just a month after the Lehman default. The Cyclical/Defensive equity trade turned in November. Next were HY Spreads and US treasuries in December. Global Equities didn't turn until 4 months after EMBI spreads. The more fundamental indicators such as ERI or ISM based out before equities.

Figure 9. Asset Price Turns in 2008-09 (After EM Bond Spreads)

	Lag	Low Date (08-09)
EMBI Spread	0	24/10/2008
Cycl vs Def Equities	27 days	20/11/2008
HY Spread	1 month 19 days	12/12/2008
US 10Y	1 month 25 days	18/12/2008
ERI	2 months 3 days	26/12/2008
Copper	2 months 8 days	31/12/2008
ISM	2 months 8 days	31/12/2008
European Financials	4 months 16 days	09/03/2009
Global Equities	4 months 16 days	09/03/2009
Gold	1 year 1 month 10 days	03/12/2009

Source: Citi Investment Research and Analysis

Just because equities lagged the turn in other asset classes last time round does not mean that they will this time. The global equity carriage seems to be nearer the front of the roller-coaster than it was in 2008-09. Waiting for EMBI spreads to start tightening might be leaving it too late. It may just need the gold price to peak and government bond yields to base for global equities to base this time round.

Strategy Outlook

We may be heading into another global recession, but the very fact that we have only just come out of the last one means that investors have been quicker to price in a severe downturn. The price action parallels with 2008 are beguiling and would imply further significant falls in equities before the end of this year. But if we have all seen this movie before then, even if the economic outturn is similar (which we don't not think it will be), the market outturn from here will probably be different.

Lots of bad news already priced in

Core government bond yields and gold are already pricing in events as bad as 2008-09. From here the risks for those asset classes might be that we do not see a repeat. Global equity valuations have already fallen to levels that seem to be pricing in an outcome somewhere in between a "normal" global recession and another post-Lehman melt-down. To be an aggressive seller of equities from here, then we would have to be predicting something nearer a post-Lehman 50% fall in global EPS not the 25% fall seen in a typical global economic recession. We still think the latter is unlikely, let alone the former. Of course, we need to see some more meaningful resolution of the EMU crisis, and it will probably take further falls in share prices to force that ⁴. But once that does come the upward move in global equities should be significant in our view.

Macro Out-takes

Global Emerging Markets Geoffrey Dennis 27-Sept-11

Asia Pacific Markus Rosgen 26-Sept-11

US Tobias Levkovich 23-Sept-11

Europe Jonathan Stubbs & Adrian Cattley 22-Sept-11 We provide brief summaries compiled by Bruce Rolph in The Globaliser presenting our colleagues' most recent work. Please let us know if you would like more detail.

Regional Strategy

Global Emerging Markets Strategy: Carried Out

'Emerging market currencies collapse', declares Strategist Geoffrey Dennis, 'exacerbating losses for equity investors and creating somewhat of a panic on several occasions in recent weeks... of the shocking 17.6% decline in MSCI GEMs so far in Sep – the worst month for the asset class since Oct-'08 – over 40% has been due to currency declines... with Europe forecast to fall back into recession, several financial assets show some similarities with 2008-9, but we reject the full comparison between today and the global financial crisis... modest dollar strength and some bounce in EM currencies need not be a major negative for EM equities... in a strong dollar environment, we show the relative winners are Latin America; India, Malaysia, Colombia and Mexico... in any dollar relapse, winners should be CEEMEA and Latin America; Indonesia, Thailand, Brazil, Russia and CE3'.

Asia-ex Strategy: And Now... a Stronger US Dollar

'US dollar strong = Asia weak', accepts Asian Strategist Markus Rosgen, 'for as the US dollar rallies, liquidity gets tighter, export prices weaken, ROE and earnings begin to fall... that has been the refrain over the last 30 years... and it looks to be the same again now... on a US dollar rally, avoid the commodity, industrial and real estate sectors – only defensives outperform... the good news is, the US dollar rally this time has started at the lowest valuations we've seen since 1975: past periods of US dollar strength happen when we are trading above 2x book – we are now at 1.5x book... and based on cyclically adjusted earnings, valuations shows recession now priced in, with Asia ex now cheaper than 1990 recession or SARS and at 2001 levels... compared to 2008, we have 13% to go'.

US Equity Strategy: Monday Morning Musings – Cash Considerations

'US non-financial corporations are sitting on \$2trn of cash', reminds Strategist Levkovich, 'that can be used across a wide spectrum of options... the recent pickup in junk bond yields argues for some higher hurdle rates for deal activity notably for private equity purchasers – thus, one cannot expect a huge uptick in M&A to drive shares in the near term... nevertheless, US households also appear to be hoarding cash in spite of low deposit rates, with nearly \$8trn of deposits currently... implying cash held by households and corporates equals ~80% of the S&P500's market cap – well above the levels seen in both 2000 and 2007 when stock prices peaked... thus, at the very least, such cash does protect shareholder downside and could unleash substantive upside when CEOs feel more empowered'.

European Portfolio Strategist: No Growth

'Increasingly, growth is being priced out and value emerging', notices the European Portfolio Strategist, 'for at the stock level, 62% of European stocks under coverage now appear priced for no growth against the 6 year average of 47%... this figure reached 81% at the end-'08 so we are not at the extremes currently, but we are getting closer... falling markets and a de-rating should bring out the bargain hunters in all of us... this is always difficult... we screen for stocks we estimate are currently priced for no growth in perpetuity that are also trading within 5% of their 52 week lows and 20% of their 2008/9 lows... or the sort of stocks that we think should react positively if there is evidence that macro events are stabilizing'.

CEEMEA Andrew Howell 22-Sept-11

Japan Kenji Abe 20-Sept-11

Latin America Jason Press 14-Sept-11

Economics
Michael Saunders
23-Sept-11

CEEMEA Strategy: The Currency Slide – Watch local bond markets/What to buy

While August was a particularly rough month for share prices in Central Eastern Europe Middle East & Africa (CEEMEA), September has been more about the currencies. Currencies are down 10-15% so far this month, in the worst 3 weeks for CEEMEA FX since Oct-'08. The currency moves are also being felt in other asset prices, with local bond yields starting to move higher in September. To some degree, latest currency moves have brought about what central banks have wanted for some time: greater competitiveness and import suppression. However, we also need to watch these rates closely: a sell-off in bonds could indicate a tightening in financial conditions that could deal a further blow to the growth outlook.

Japan Equity Strategist Flash: US trip report - Go with the flow

'With concerns about eurozone sovereign risk intensifying and euro equities sinking dramatically', notices Japan Strategist Kenji Abe, 'it seems the number of US investors hiking their Japanese equity weightings has increased... from our latest trip, more US investors were overweight Japanese equities now than when we visited in May... their holdings are still biased toward exporters such as machinery names and auto stocks... but, we got the impression this is likely to shift soon, into domestic-demand stocks... thanks to expansionary fiscal policy, yen strengthening against the dollar, and the slowdown in the global economy... among domestic demand plays, we recommend: 1) retailers that look undervalued; 2) telecoms, which is benefiting from the spread of smartphones; and 3) real estate, where interest cost burdens are expected to lighten under monetary easing'.

Latin America Equity Strategy: Flush with Cash

'Capex levels remain healthy, but growth is decelerating', notices Latam Strategist Jason Press, 'and, after a surge in regional M&A in 2010 to \$94bn, the annualized rate for '11 suggests a large decline in activity to ~\$60bn (-52%)... due to macro uncertainty, Latam managements are spending less on capex and M&A, and are instead, increasing dividends and buyback activity... on the one hand, dividends and buybacks demonstrate a commitment to shareholders... on the other, lower investment rates could result in further uncertainty and lower long-term growth... either way, we stay Overweight Brazil, where the market is still pricing in an earnings recession - too pessimistic, in our view'.

Economics Analysis

Euro Weekly: Debt Restructuring Better Early Than Late

'We now expect a substantial and probably coercive debt restructuring of the Greek sovereign', laments the Euro Weekly, 'by the end of 2012 at the latest and likely much sooner... we expect Ireland and Portugal to follow soon afterwards, mainly because of "political contagion"... in order to reduce debt-to-GDP levels to 60% in 2012, it would require debt haircuts (ex-IMF) of 67% in Greece and 53% in Portugal and Ireland... and with multiple restructurings taking place, we expect the euro area to fall back into recession and the ECB to cut rates back to 1.0% by 1Q'2012'.

Market Outlook

The ongoing sovereign crisis in Eurozone, US debt downgrade and worries about global growth caused a sharp pullback in global equities. We think the stock market is questioning the sustainability of current corporate earnings and pricing a global EPS contraction of up to 25% for 2012. This is unlikely to happen in our view. Our forecasts for global EPS growth are 12% for 2011 and 9% in 2012. Our MSCI ACWI 2011 year-end target is 360 (currently 290). Cheap equity valuation relative to history and ultra-low interest rates, make us expect more de-equitisation (M&A/buybacks) as a result.

Regional Strategy

Our key regional and global sector recommendations are summarised in Figure 10. Emerging Markets remain our preferred structural growth play. EM economic and EPS momentum remain robust compared to DM. We stay Overweight. We are also Overweight Japan, which is our recovery play. The post-earthquake EPS downgrades have reversed and we believe Japan can benefit from positive earnings trends from this point. We are Neutral on US. The 2Q earnings season has been strong and a weaker US\$ should support US equities. Europe ex UK has been one of the worst performers recently due to ongoing sovereign concerns. Although we see some risk to earnings in Europe ex UK, cheap valuations and expectations of a market rebound keep us at Neutral. We are Underweight UK and Developed Asia.

Sector Strategy

Our global sector strategy keeps a cyclical tilt. We prefer to buy operational leverage rather than financial leverage. Our Overweights include IT, Materials and Industrials. We think these sectors are likely to benefit from a market rebound. Despite the recent poor performance we keep Financials at Neutral as we think short-term performance may be strong in any improvement in investors' risk appetites. Our Underweights have a clear defensive tilt and include Telecoms, Health Care and Consumer Staples. Other than being defensive, these sectors still see weak relative earnings trends and relative valuations are not particularly attractive (other than Telecoms).

Risk

The biggest risk to our outlook is another deep economic recession.

Analyst Certification

The research analyst(s) primarily responsible for the preparation and content of this research report are named in bold text in the author block at the front of the product except for those sections where an analyst's name appears in bold alongside content which is attributable to that analyst. Each of these analyst(s) certify, with respect to the section(s) of the report for which they are responsible, that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc and its affiliates. No part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendation(s) or view(s) expressed by that research analyst in this report.

IMPORTANT DISCLOSURES

Analysts' compensation is determined based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates ("the Firm"). Like all Firm employees, analysts receive compensation that is impacted by overall firm profitability which includes investment banking revenues.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Investment Research & Analysis product ("the Product"), please contact Citi Investment Research & Analysis, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at www.citigroupgeo.com. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

Guide to Citi Investment Research & Analysis (CIRA) Fundamental Research Investment Ratings:

CIRA's stock recommendations include a risk rating and an investment rating.

Risk ratings, which take into account both price volatility and fundamental criteria, are: Low (L), Medium (M), High (H), and Speculative (S).

Investment ratings are a function of CIRA's expectation of total return (forecast price appreciation and dividend yield within the next 12 months) and risk rating.

Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and/or trading in the company's securities (e.g. trading suspension). Stocks placed "Under Review" will be monitored daily by management. As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis.

To satisfy regulatory requirements, we correspond Under Review to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation.

Relative three-month ratings: CIRA may also assign a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may highlight a specific near-term catalyst or event impacting the company or the market that is anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) will indicate the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of NASD/NYSE ratings-distribution-disclosure rules, most preferred calls correspond to a buy recommendation and least preferred calls correspond to a sell recommendation. Any stock not assigned to a most preferred or least preferred call is considered non-relative-rated (NRR). For purposes of NASD/NYSE ratings-distribution-disclosure rules we correspond NRR to Hold in our ratings distribution table for our 3-month relative rating system. However, we reiterate that we do not consider NRR to be a recommendation.

For securities in developed markets (US, UK, Europe, Japan, and Australia/New Zealand), investment ratings are:Buy (1) (expected total return of 10% or more for Low-Risk stocks, 15% or more for Medium-Risk stocks, 20% or more for High-Risk stocks, and 35% or more for Speculative stocks); Hold (2) (0%-10% for Low-Risk stocks, 0%-15% for Medium-Risk stocks, 0%-20% for High-Risk stocks, and 0%-35% for Speculative stocks); and Sell (3) (negative total return).

For securities in emerging markets (Asia Pacific, Emerging Europe/Middle East/Africa, and Latin America), investment ratings are:Buy (1) (expected total return of 15% or more for Low-Risk stocks, 20% or more for Medium-Risk stocks, 30% or more for High-Risk stocks, and 40% or more for Speculative stocks); Hold (2) (5%-15% for Low-Risk stocks, 10%-20% for Medium-Risk stocks, 15%-30% for High-Risk stocks, and 20%-40% for Speculative stocks); and Sell (3) (5% or less for Low-Risk stocks, 10% or less for Medium-Risk stocks, 15% or less for High-Risk stocks, and 20% or less for Speculative stocks).

Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member

organization and therefore may not be subject to the NYSE Rule 472 and NASD Rule 2711 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Ltd	Robert Buckland; Mert C Genc; Beata M Manthey, PhD; Hasan S Tevfik, CFA; Jonathan Stubbs; Adrian Cattley; Andrew Howell, CFA; Michael Saunders
Citigroup Global Markets Inc	Michael Geraghty; Tobias M Levkovich; Scott T Chronert; Geoffrey Dennis; Jason Press
Citigroup Global Markets Japan Inc.	Kenji Abe, PhD
Citigroup Global Markets Asia	Markus Rosgen
Citicorp Pty Ltd	Tony Brennan

OTHER DISCLOSURES

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Investment Research & Analysis (CIRA) does not set a predetermined frequency for publication, if the Product is a fundamental research report, it is the intention of CIRA to provide research coverage of the/those issuer(s) mentioned therein, including in response to news affecting this issuer, subject to applicable quiet periods and capacity constraints. The Product is for informational purposes only and is n

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers: Morgan Stanley & Co. LLC (Morgan Stanley) research reports may be available about the companies that are the subject of this Citi Investment Research & Analysis (CIRA) research report. Ask your Financial Advisor or use smithbarney.com to view any available Morgan Stanley research reports in addition to CIRA research reports.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to CIRA's Products can be found at www.citigroupgeo.com.

Compensation of equity research analysts is determined by equity research management and Citigroup's senior management and is not linked to specific

The Product may have been distributed simultaneously, in multiple formats, to the Firm's worldwide institutional and retail customers. The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.

Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product. With the exception of our product that is made available only to Qualified Institutional Buyers (QIBs), CIRA concurrently disseminates its research via proprietary and non-proprietary electronic distribution platforms. Periodically, individual CIRA analysts may also opt to circulate research posted on such platforms to one or more clients by email. Such email distribution is discretionary and is done only after the research has been disseminated via the aforementioned distribution channels. CIRA simultaneously distributes product that is limited to QIBs only through email distribution.

The level and types of services provided by CIRA analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with Citi and legal and regulatory constraints.
