January 2012

Summary

Global Economy: On thin ice

- * EU economies would see recessionary conditions persisting although ECB's incrementally aggressive approach lessens the likelihood of an event risk materialising.
- * US macro data has improved to an extent, but lead indicators point towards a weak growth. Slowdown is spreading to EMs including China; 2012 to see growth taking precedence over inflation in policy actions across the region.

Indian Economy: More than a normal business cycle slowdown

- * Policy paralysis, fiscal slippages, monetary tightening and uncertain external environment are weighing heavily on the investment cycle. Rate cuts alone would not be adequate to engineer a turnaround.
- * Current macro decline is fashioned on the lines of 1992 slowdown even though the economy is better placed on vulnerability indicators. In our base case, FY13 GDP growth is likely to be ~7% but may slip to ~5.8% in a bear case scenario.
- * Two key measures, fiscal consolidation & de-bottlenecking of coal production, can help kick start the investment cycle.

Markets: Concerns persisting, still favoring defensives

- * Earnings trajectory continue to face headwinds. Our base case Sensex EPS for FY13 is INR1,261, already downgraded by over 10%, with the risk of further downgrades looming large. However, our bear case estimates put earnings at INR1,143 (GDP growth at 5.8% and USD-INR at 52).
- * On an absolute basis, valuations seem fair and below long term averages. But compared to peers in 'BRICS', India is still expensive as FY13 numbers face the risk of further downgrades.
- * Given this fragile outlook, the Sensex is likely to be range bound between 14,000-17,000.
- * Key themes to play: (a) weak rupee to support earnings in export oriented sectors (maintain OW on pharma, move IT to EW from UW) (b) domestic demand remains healthy (maintain OW on consumer sector) and (c) no immediate visibility on revival of capex (move industrials to UW).
- * Model portfolio: Outperformed Nifty by 200bps in CY11; since CY09, outperformance has been by ~400bps.

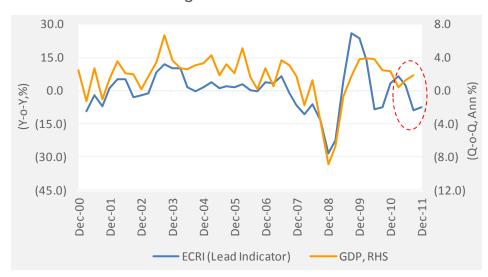

Global Economy: On thin ice

Western economies: In the lurch

ECRI hints at weak US growth ahead

*ECRI has been a widely tracked lead indicator for US GDP Source: Bloomberg

Post -Trichet, ECB turns aggressive in supporting banks

Source: Bloomberg

- * US economic outlook for 2012 remains largely delicate (regardless of some recent improvements) as structural constraints linger on.
- * In Europe, amidst rising inter-bank stress, ECB has turned more supportive (e.g LTRO, rate cuts etc), ensuring that the EU banking system remains afloat. Indeed, if the situation nears the brim, ECB is likely to shed its reluctance to act as a lender of last resort to sovereigns.
- * In sum, while Western economies would continue to see anemic growth in 2012, the likelihood of an event risk materialising has reduced meaningfully.

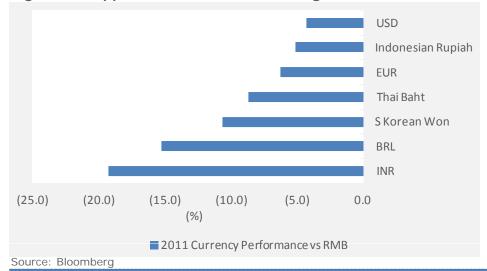

China: Outlook deteriorating

Chinese property market cooling off rapidly

Significant appreciation in RMB - a strong headwind

Industrial activity, exports growth fall as well

- * China's growth is expected to weaken due to the deterioration in both external and domestic environments.
- * The scenario will surely impact EM growth and commodity prices as china is a large importer of industrial metals like iron ore, copper, etc.

India to benefit from RMB appreciation and fall in commodity prices

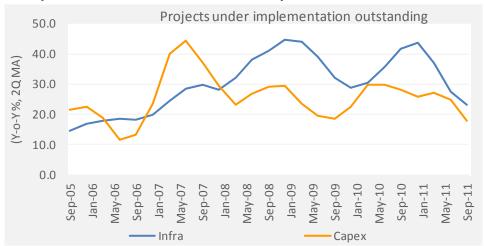

Indian economy: More than a normal business cycle slowdown

Severe weakening in macros

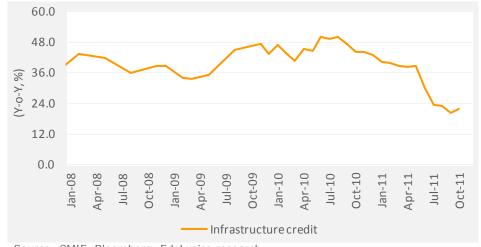

Sharp slowdown in both infra and capex investments

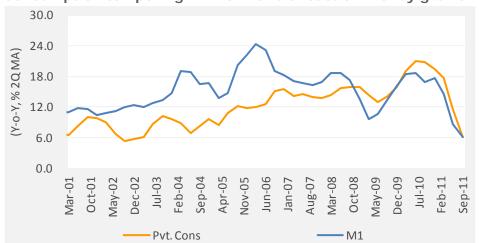

^{*}Infra projects include: power, ports, roads etc while capex include manufacturing, mining etc

Credit to infra also falling

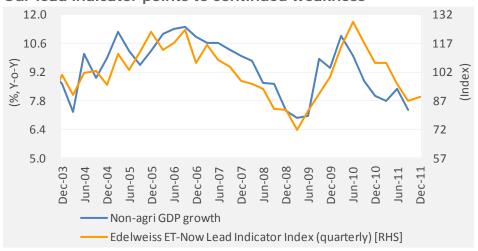

Source: CMIE, Bloomberg, Edelweiss research

Consumption tempering in line with transaction money growth

Our lead indicator points to continued weakness

Weakness seen across the board

Causes and consequences

What are the causes?

- Domestic policy paralysis
- * Aggressive monetary tightening
- * Fiscal deficit deterioration
- * Highly uncertain external macro and markets backdrop

How worse can it get?

- * Current macro deterioration seems modeled on 1992 slowdown, but the economy is better placed on vulnerability indicators.
- **★** In our bear case, FY13 GDP growth is likely to be ~5.8% whereas our base case remains at ~7%.

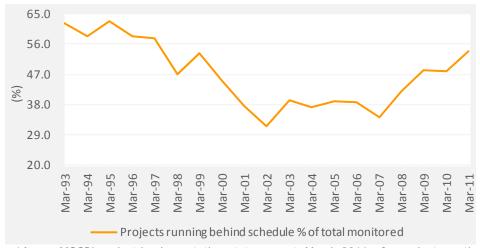

What needs to be done?

- Monetary easing
- * Fiscal consolidation
- Govt policy and reforms
- * Govt instilling confidence back in bureaucracy to take decisions

1. Domestic policy paralysis

More and more projects* running behind schedule

Delays observed across sectors

	Projects under monitoring	No of projects delayed	% Delayed
Roads/Highways	135	113	83.7
Coal	45	20	44.4
Steel	19	10	52.6
Petroleum	82	38	46.3
Power	87	46	52.9
Railways	148	33	22.3
Shipping/Ports	26	18	69.2

Source: MOSPI

Sharp rise in no. of projects shelved since late last year

- * Project delays have been on rise post 2008 crisis.
- * Over the last 8-9 months, policy hurdles such as greens issues have only intensified these delays

Source: CMIE

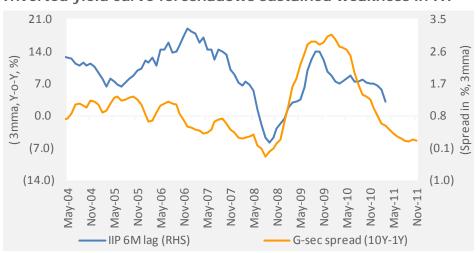

Rising project delays observed across sectors

^{*}As per MOSPI project implementation status report, March 2011 - for projects costing INR150cr and above (607 projects monitored of which 157 are mega projects with a total cost of more than INR7lac cr.)

2. Aggressive monetary tightening

Inverted yield curve foreshadows sustained weakness in IIP

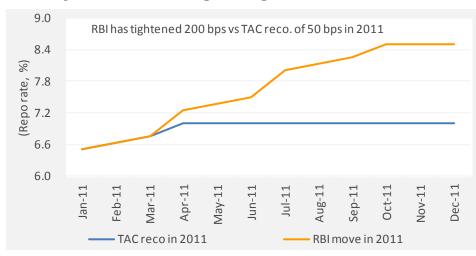

(Already) tight monetary conditions to get tighter

Source: RBI, Bloomberg and CMIE Note: Real rate is based on repo rate and WPI

RBI may have overdone tightening

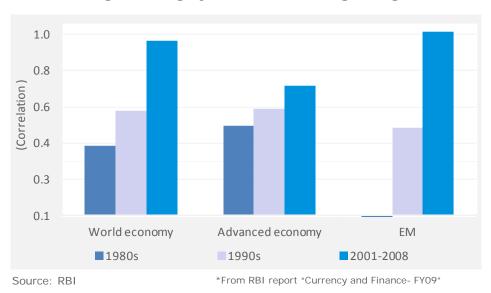

Note: TAC - Technical Advisory Committee to RBI; recommendations are by majority of members

- * By far the most aggressive tightening by RBI over the last decade (225 bps in 2011 compared to 125 bps in 2008)
- Persistent inverted yield curve directs towards continued weakness in industry, at least for the 1H FY13
- * Aggressive tightening by RBI has hurt investments much more than consumption

3. Adverse external economy

- * Indian inter linkages with the world have gone up substantially over the last decade.
- * Exports and imports (of goods and services) as % of GDP shot up from ~26% to ~46% in the same period.

How bad can it get? - Reminiscing 1991-92, 2000-01 & 2008-09 crises

Balance of payment crisis: 1991-92

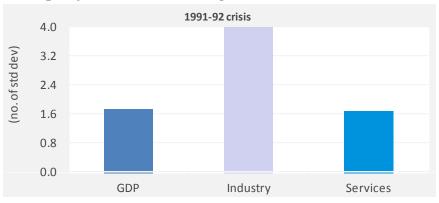

- * Acute decay in domestic macros: Economy faced persistent twin deficits, a perched inflation, severe drought and a higher recourse to short term debts (like ECB) to fund CAD. Further pegged INR inhibited adjustments.
- * Absence of shock absorbers: Low forex reserves (down ~70% in a span of 11 months) and little room for Govt to provide fiscal stimulus.
- * Gulf war spiked crude oil prices while external environment turned hostile with recession in US and UK. Industries bore the brunt as the slowdown lasted 4-5 quarters.

Domestic macros & vulnerability ratios deteriorated significantly

Macro indicators	FY89	FY90	FY91	FY92	FY93	FY94
GDP growth	10.2	6.1	5.3	1.4	5.4	5.7
Fiscal deficit (% GDP)	7.3	7.3	7.8	5.6	5.3	6.9
Inflation (YoY %)	7.5	7.4	10.2	13.8	10.0	2.6
CAD (% GDP)	(2.7)	(2.3)	(3.0)	(0.3)	(1.7)	(0.4)
Vulnerability indicators				!	! 	
Import cover in mnts	2.4	1.9	2.5	5.3	4.9	8.6
CAD+Net FDI (% GDP)	(2.7)	(2.3)	(3.0)	(0.3)	(1.6)	(0.2)

Source: CMIE

Strong impact felt on industry ...

Source: CMIE

*Shock has been calculated by dividing the growth slippage in shock year by S.D of the preceding five years

- * Govt measures: Mainly structural reforms including de-licensing of industries, reducing import duties and liberalizing various sectors for foreign investments.
- * A sharp recovery in the US helped the resurgence.

Technology bubble burst: 2000-01

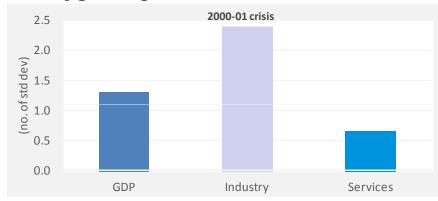

- * Domestic macros healthy as shocks came from external economies.
- ▶ Drought in FY01 soon complicated matters (just like FY92). Crude prices meanwhile had skyrocketed by ~70% YoY on an average in FY00.
- * Like the previous jolt, industry bore the maximum brunt as the slowdown lived on for ~4 quarters.

Domestic economy well placed to survive shocks

Macro indicators	FY98	FY99	FY00	FY01	FY02	FY03
GDP growth	4.3	6.7	7.6	4.3	5.5	4.0
Fiscal deficit (% GDP)	5.8	6.5	5.4	5.7	6.2	5.9
Inflation (YoY %)	4.4	6.0	3.3	7.1	3.6	3.4
CAD (% GDP)	(1.4)	(1.0)	(1.0)	(0.6)	0.7	1.2
Vulnerability indicators				!	i	
Import cover in mnts	6.9	8.2	8.2	8.8	11.5	14.2
CAD+Net FDI (% GDP)	(0.5)	(0.4)	(0.6)	0.4	2.2	2.5

Source: CMIE

Industry got hit again...

Source: CMIE

- Gradual monetary easing (400 bps over next 2-3 years)
- * No sizeable fiscal stimulus
- Sharp monetary easing in US

Great recession: 2008-09

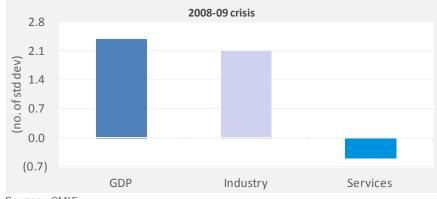

- Domestic economy was healthy, but external shocks were too profound
- ♣ Drought in FY09 complicated matters (a 'la FY92, FY01) even as crude ran upto USD140/bbl (~100% YoY growth).
- **★** Industry wobbled as the slowdown persisted for ~3 quarters.

Domestic economy well positioned to bear up shocks

•					•	
Macro indicators	FY06	FY07	FY08	FY09	FY10	FY11
GDP growth	9.5	9.6	9.3	6.8	8.0	8.6
Fiscal deficit (% GDP)	4.0	3.3	2.6	6.0	6.4	5.1
Inflation (YoY %)	4.4	5.4	4.7	8.4	3.9	9.9
CAD (% GDP)	(1.2)	(1.0)	(1.3)	(2.3)	(2.8)	(2.6)

Import cover in mnts	11.6	12.5	14.4	9.8	11.1	9.6
CAD+Net FDI (% GDP)	(0.9)	(0.2)	-	2.3	(1.4)	(2.2)

Source: CMIE

Industry more impacted again...

Source: CMIE

- Sharp monetary easing (425 bps in just seven months)
- * Fiscal stimulus (3.5% of GDP Measures include Sixth Pay Commission, farm Ioan waiver, excise cut etc)
- Synchronized monetary and fiscal stimulus, globally

Current scenario

- * Severe deterioration in domestic macros: Economy facing twin deficits, elevated inflation and higher reliance on debt flows to fund CAD (ditto FY92).
- * However, it is better placed on vulnerability indicators: Decent forex reserves, low external debt and INR depreciation of ~20% to facilitate adjustments in CAD (unlike 1992)
- * Unfavorable external economy and persistently high crude oil prices pose risks.

Macros worsening

Macro indicators	FY10	FYII	FY12(E)	FY13(E)	Macro
GDP growth	8.0	8.6	7.0	7.0	indicators are
Fiscal deficit (% GDP)	6.4	5.1	5.8	5.4	deteriorating –

Source: CMIE

Our analysis

#### assumes:

- * Impact on industry to be as severe as 1992; services are more vulnerable given the changed nature (e.g financial sector today is more market oriented).
- * Current slowdown might be a prolonged one given no scope for a fiscal stimulus, both domestically and globally.

  Unleashing 1992 like reforms are unlikely.

Macro situation tenuously resembles 1992 though India is better equipped in terms of shock absorbers

What can change it?

### 1. Fiscal consolidation

Source: CMIE

Public sector bal + Private sector bal + external sector bal = 0

* For private capex cycle to pick up, fiscal consolidation is a must, especially since external flows are unlikely to be strong.

^{*} Balance = Savings -Investments

### 2. Policy announcements

- * De-bottlenecking approval process for coal mining given its significant linkages to power, steel, aluminium and cement sectors. This can lift the broader economy
- * SEB reforms: To help address the slump in power capex
- * Implementation of DTC, GST: To simplify tax collection and increase tax buoyancy
- Passing Land Acquisition Bill
- Govt boosting confidence of bureaucracy to take decisions

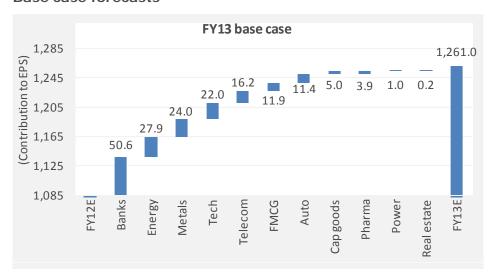

What does it mean for India Inc?

### Earnings: More downside risks

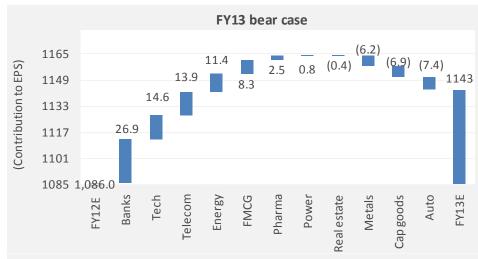

- **★** Based on the base case macro assumptions (GDP growth at ~7.0% and USD-INR at ~50.0), FY13E Sensex earnings stand at INR1,261. Key drivers are banks, energy and metals
- **★** Going by stress case assumptions (GDP growth at ~5.8%, USD-INR at ~52.0), earnings are expected to grow by ~5.2%. Sectors likely to drag down earnings growth include metals, cap goods and auto

#### Base case forecasts

Source: Bloomberg, Edelweiss research

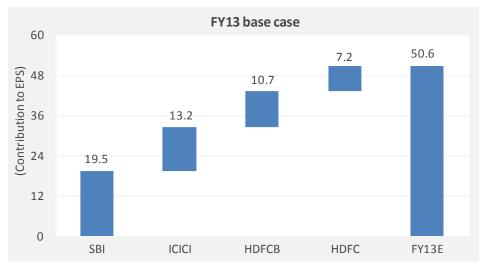

#### Bear case forecasts

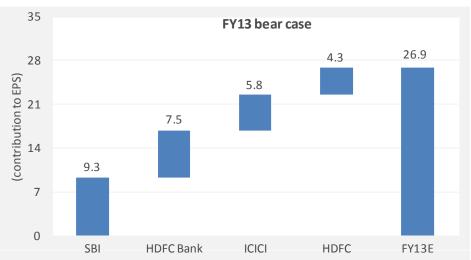

## BFSI sector: Higher credit costs drag down stress case earnings

#### Base case forecasts

#### **Bear case forecasts**

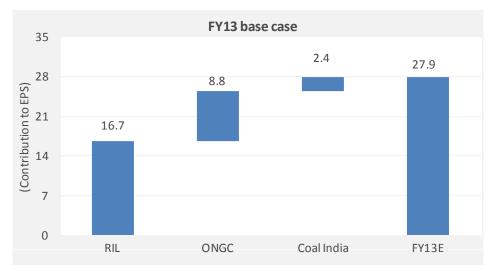

#### Key sectoral assumptions:

	Base case	Bear case
Credit growth	Assuming a GDP growth of 7%, we have assumed industry credit growth of about 17%.	Assuming a GDP growth of 6%, we have assumed industry credit growth of about 14%.
NIMs	Given the reversal of the interest rate cycle we are assuming NIMs to see decline upto 15 bps on a yoy basis	Given the reversal of the interest rate cycle and lower CD ratio we are assuming NIMs to see decline of upto 30 bps on a yoy basis
NPLs	Credit costs moving higher by 10-20bps	Credit costs moving higher by 20-30bps, considering the stress in power, aviation, agri and SME scetors

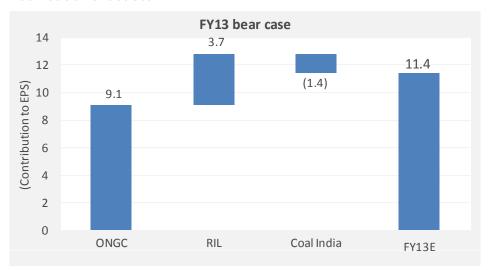

## Energy sector: Stress case earnings affected by low RIL GRMs

#### Base case forecasts

#### Bear case forecasts

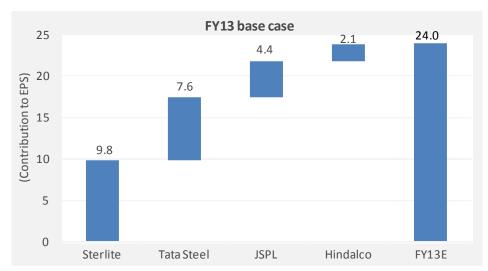

#### Key sectoral assumptions:

	Base case	Bear case
Crude price assumption	USD95/bbl	USD90/bbl
GRMs	Maintaining RIL's GRMs at USD9.5/bbl	Slashing RIL's GRMs to USD8/bbl (excluding the crisis, it is the lowest since FY04)
Under-recovery and subsidy sharing	Upstream sharing at 50% and industry recovery of INR835bn implies ONGC net realisation of USD50.3/bbl	Upstream sharing at 50% and industry recovery of INR802bn implies ONGC net realisation of USD48.9/bbl; INR depreciation leads to positive EPS change for ONGC.
Coal	Sales volume for Coal India at 440mt, blended realisation at INR1,430/t	Sales volume for Coal India at 420mt, blended realisation at INR1,385/t

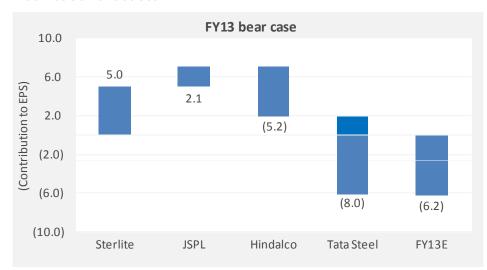

## Metals sector: Drop in realisations to hurt stress case earnings

#### **Base case forecasts**

#### Bear case forecasts

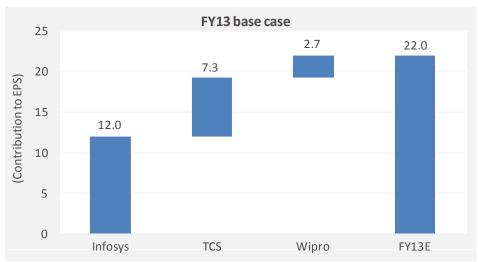

#### Key sectoral assumptions:

	Base case	Bear case
Steel		
Realisation	Unchanged from the current assumption of INR35,000/t	Steel realisation reduced by INR1,000/t to INR34,000/t
RM costs	Reduced raw material prices of coking coal by	Reduced raw material prices of coking coal by
	USD30/t(current levels)	USD20/t(current levels)
Non ferrous		
Aluminum	Considering the weak macro, revising down realisation	Revising down realisation of Aluminum to USD2,100/t
	of Aluminum to USD2,400/t from USD2,550/t	from USD2,550/t
Zinc	Zinc price assumption maintained at USD2,100/t	Zinc price assumption cut to USD1,800/t

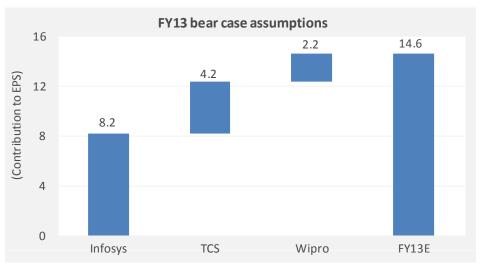

## Tech sector: Tepid volume growth, pricing decline key concerns

#### Base case forecasts

#### Bear case forecasts

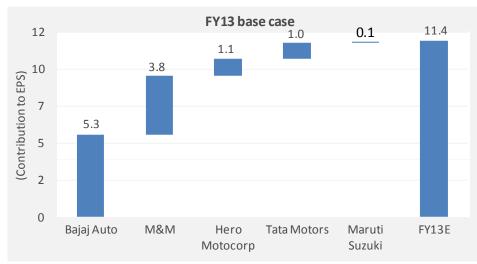

#### Key sectoral assumptions:

	Base case	Bear case
Overall scenario	Due to delay in decision making, volume growth would moderate and there could be marginal price cuts	If the US economy faces recession, then we could revisit FY10 growth scenario which is single digit volume growth combined with pricing pressure
Volume growth	Assuming volume growth to moderate to 14-16%	Volume growth of 2-3% (historically even in recesssions, volumes have never declined. Even in CY09, volume growth was 4-5%)
Pricing	Pricing to decline by 2%	We are assuming pricing decline of 3%

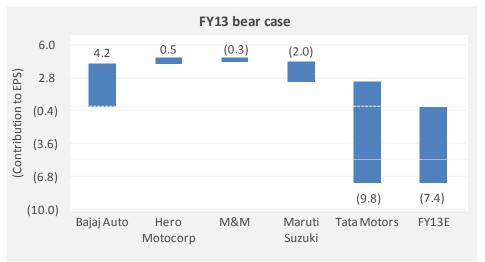

## Auto sector: Bear case EPS affected by slower volume growth

#### Base case forecasts

#### Bear case forecasts

#### Key sectoral assumptions:

	Base case	Bear case
Volume growth	At 7% GDP growth, sales growth is likely to moderate to	
	5-6% for cars, low single digit for trucks, 15% for LCVs,	to 0-2% for cars, -10% for trucks, 8% for LCVs, 8% for
	10% for tractors, 8% for two wheelers. JLR volumes: 8%	tractors, 4% for two wheelers. JLR volumes: 5% decline
	growth for LR, flat for Jaguar	
Margins	USDINR at 50 likely to provide margin relief vs H2FY12	In case of a recession, there could be a decline in metal
		prices which could be margin accretive

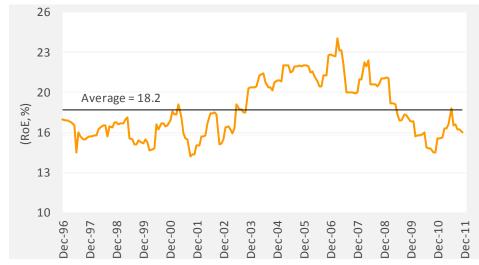

### Valuation indicators: Trading well below its long term average

#### P/E below average levels

#### RoEs remain stable

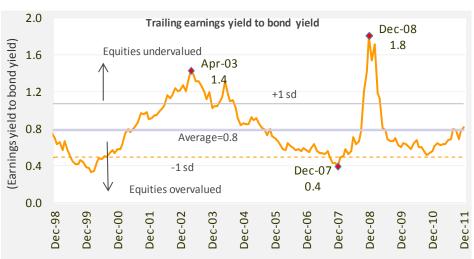

Source: Bloomberg, Edelweiss research, data for MSCI India Index

#### P/B also coming off

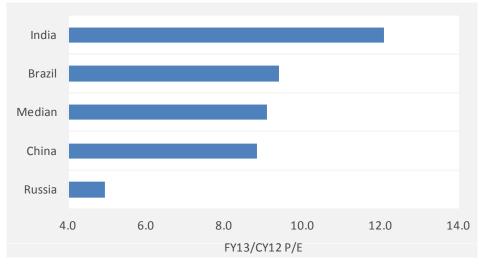

#### Equity-bond valuation gap indicating fair value

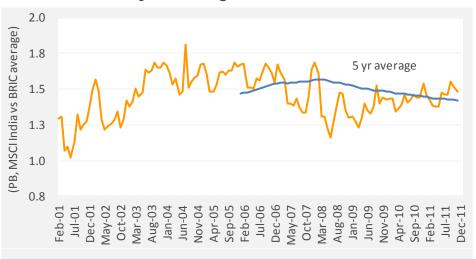

### Relative valuations: Expensive compared to peers in BRICs

#### On earnings multiple, India trading at a premium to peers

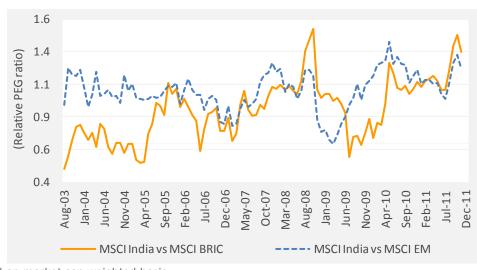

#### P/B still above 5 year average

#### RoEs in contraction mode compared to BRICs

#### Overvalued on PEG basis too

#### Let down by tepid flows

(USD bn)	Net FII	Net DII
CY06	7.9	3.4
CY07	17.4	5.6
CY08	(13.3)	16.6
CY09	18.2	5.3
CY10	29.3	(4.7)
CY11	(0.6)	5.9

Source: Bloomberg, Edelweiss research

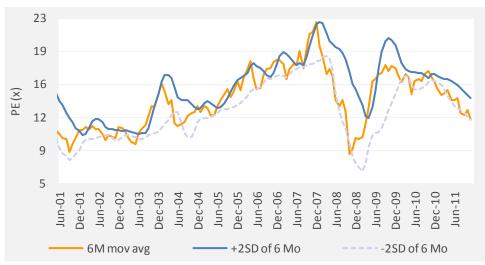

Source: Bloomberg, Edelweiss research

* Monthly returns were negative for nine months this year - the worst in recent times, surpassing CY08 when seven months were negative

### Outlook for valuations: To remain within a range

Source: Bloomberg, Edelweiss research

- * A six monthly moving average of historical PE suggests that markets have traded in a tight band of +/- 2sd. At current levels of ~12.2x forward PE, markets are trading closer to the lower 2sd band of 11.8x
- * The long term (16-yr) forward multiple has been 13.6x. If we assume a decent 15% return in CY12, markets at a PE of 11.5x-11.6x could offer a fresh buying opportunity (as markets generally tend to revert to mean)
- * In absence of any triggers besides the above arguments, we expect markets to remain in a trading zone of 11.8x on the lower end of the band and 13.6x on the upper end of the band

### Key themes to play on

- * Weak rupee to support earnings in export oriented sectors
  - Given that the rupee is expected to remain weak, we believe export oriented sectors will stand to benefit
  - We favor pharma as a preferred play followed by IT not purely for the favorable USD-INR dynamics but also for their inherently strong cash flows and higher visibility in earnings
- * Domestic demand stays healthy
  - In our view, underlying trends in consumption still remain strong. A declining inflation trajectory in FY13 and a healthy rural demand will continue to support consumption
  - Accordingly, we continue our OW stance on the consumer sector
- * No immediate visibility on capex revival
  - Given the current scenario, a rate cut alone will not be sufficient to spur investment demand in the economy. Accordingly, we are moving cap goods to UW from EW

# Key risks

- Event risk materialising in Europe
- * China faces a hard landing
- * Geo political risks (Middle East, etc) leading to a spike in crude prices
- * Significant fiscal deterioration in India

# Top picks

Our top picks under the lens

### TCS

#### * Investment rationale

- TCS continues to witness strong demand despite uncertain macro environment. Overall, it is well poised to deliver better performance compared to peers, thereby gaining market share
- The ability to win 9-10 large deals a quarter in the last few quarters offers strong visibility for FY13 with higher annuity revenues
- From FY11 EBITDA margin level of 30%, we see TCS with increased efficiency managing the EBITDA margins in 29-30% range going into FY13 as well.
- TCS' focus on selling products, platform BPO, and SMB offering iON are finding stronger focus within the organization, which will aid significant increase in its non linear revenue stream.

### * Potential trigger

• Announcement of multiple large deal closures. It recently announced a 15-year USD 2.2bn deal win from Friends Insurance, UK.

### * Key risks

• Double-dip recession in the US and Europe and currency appreciation.

### * Outlook and valuations

• At CMP of INR 1,161, the stock is trading at P/E of 17.8x FY13E.

### Bharti Airtel

#### * Investment rationale

- Collaboration between top five operators to share infrastructure including towers and optic fibre would lead to reduction in capital expenditure.
- Tariff hikes and reduction in distributor commissions expected in 1HFY13, which would lead to improvement in cash flows.
- Africa business tracking well with MOU improvement better than RPM decline and consistent margin improvement. Street estimates for EBITDA growth at 6% CQGR over next eight quarters lower than company's internal target of 8%, hence risk of disappointment minimal.
- The negative impact of policy changes assumes spectrum pricing as recommended by the group of experts set up by TRAI. Spectrum prices would be lower than that assumed as, in future, prices discovered through auctions would be used to compute the spectrum fees to be paid on license renewal. This would lead to lower impact than is being assumed currently by street.

### Potential triggers

• New Telecom policy, imminent in the next couple of months, would bring in much needed clarity for operators including sharing of spectrum, which would result in capital conservation.

### * Key risks

• If exchange rate persists at INR 52/USD over next five years, then loan repayment would lead to additional cash outflow of USD2bn.

### * Outlook and valuations

• At current price of INR 344, the stock is trading at 11.8x FY13 EPS

Financials

### Coal India

#### * Investment rationale

- Coal India (CIL) is the world's largest coal producer with FY11 volume of ~431mt. It controls more than ~80% of the Indian coal market besides owning the world's largest coal reserves of 18bt, 1.8x its nearest competitor.
- CIL will be the prime beneficiary of the expected increase in demand- India's coal deficit expected to rise to 145mt in FY13 from 93mt in FY11.
- Possibility of discount reducing to international coal prices
- The pseudo regulated nature, assured off-take of volume and no prospects of a price cut (FSA coal) position CIL as a utility play rather than a resource company.
- High RoE business; in excess of 30% over the last three years. Net cash of INR 96/share at end of FY12E.

### * Potential triggers

- Stepping up production in Q4FY12 and FY13
- Ability to take further price hikes for non-power consumers

### * Key risks

- Proposed tax of 26% on coal mining profits and a higher-than-expected wage revision
- Diversion of cash for buying minority stakes
- Disappointment on volume due to production challenges, slow mining approvals and logistics issues

### Outlook and valuations

At a CMP of INR 301, the stock is trading at 10.1x FY13 EPS

Financials

### **HDFC Bank**

#### * Investment rationale

- Stress assets of 34.6% (lowest in our coverage) and negligible restructured assets provide comfort in a difficult macro environment
- High coverage of 81.3% and Tier 1 of 11.4% also stand out
- Conservative lending Downsizing of unsecured loans (9.5% currently, down from 15.5% in FY08), low power book and no major sector concentration
- Steady profit stream, used to make floating provisions

### * Potential trigger

• More resilient to stress from asset quality degradation and this would support the valuation premium which HDFC Bank commands

### * Key risks

• Asset quality deterioration - seen in SMEs - flowing into retail assets as well

### * Outlook and valuations

- Outperformance to sustain on asset quality management—50% of the book in retail assets—largely secured
- Valuations at 2.9x FY13E book and 16.4x earnings, delivering RoEs of ~19%-20%

### Lupin

#### * Investment rationale

- Outpaced the industry growth in the domestic market by 2x over FY06-11 driven by wider therapy coverage, strong traction from new launches and highly effective field force
- Strong pipeline including niche segments such as OCs, ophthalmology and Para IV opportunities imparts long term growth visibility
- US branded formulation faces key challenges of slower growth in Antara and Aerochamber, genericization of Tricor and delay in launch over Alllernaze
- Japan is next big opportunity in generic space (USD 3 bn generic market; likely to expand at a CAGR of 15%) with strong growth (28% Y-o-Y) depicted in Q1FY12
- Emerging markets including South Africa, Philippines and Australia are depicting significant traction and could be a new growth driver for business

### * Potential triggers

• Product specific opportunities such as Zeodon, Combivir and OC's in the US

### * Key risks:

• Execution slippage in branded business in the US; Slowdown in domestic formulation market and delay in product approvals in the US

### * Outlook and Valuations:

• At CMP of INR448/share, Lupin trades at 16.8x of FY13 EPS

Financials

### Glenmark

#### * Investment rationale

- Core business is regaining momentum across geographies after slackened pace of growth over the past two years (16% from 42% CAGR)
- Glenmark's base business has attained scale which is not only self sustainable, but can also fund its NCE R&D
- Despite several setbacks, Glenmark persisted with investments in basic R&D (USD 20-25 mn annually) demonstrating its conviction in building business around NCE. The company has a credible track record in terms of monetising R&D pipeline and is one of the most successful NCE players from India
- Glenmark's focus on improving cash conversion cycle should allay concerns on high receivables

### ***** Potential triggers

- Monetization of R&D pipeline as there are 8 key data points in the R&D space over the next 12 months
- Deleveraging of balance sheet

### * Key risks:

• Disappointments in NCE pipeline, Crofelemer litigation with Napo and regulatory risks in US market

### * Outlook and Valuations:

• At CMP of INR294/share, GNP trades at 12.5x FY13 EPS

Financials				
Year to March	FY10	FY11	FY12E	FY13E

### Hexaware Technologies

### * Investment rationale

- Investment in account managers for top 25 clients is likely to help drive higher client mining among top accounts
- Long term deals won in the past 18 months provides Hexaware with a stronger revenue visibility going into CY12. It also lends itself to building scale in emerging services lines
- Led by various internal initiatives and long term annuity deals, the company is improving its margin profile. Last four quarters have seen a margin improvement of 10%
- Timely investments in scaling IMS, Testing and BPO to make it a preferred vendor (outside of scale players)

### * Potential triggers

Strong Q4CY11 results and any large contract

### * Key risks:

• Double-dip recession in US, Europe, currency appreciation and attrition

### * Outlook and Valuations:

• At CMP of INR75, trading at a P/E of 8.5x and EV/EBITDA of 4.8x CY12E.

Financials				
Year to December	CY09	CY10	CY11E	CY12E

EV/EBITDA (x)	8.6	18.1	6.6	4.8
ROAE (%)	17.8	9.4	23.7	22.7

### LIC Housing Finance

#### * Investment rationale

- Strong operating performance on all key parameters (Improved margins, asset growth and healthy asset quality performance) despite weak real estate sentiments and competition
- Market share expected to improve (currently at ~9%) aided by its target segment i.e salaried class (80% of its individual loans) and employees of public sector entities (~50%-60% of salaried class)
- Margins to bottom out in FY12 at 2.7-2.8% with maximum pressure seen in Q2FY12- ~20% of loan book ("Fix-O-Floaty" loans) to reprice upwards by 150-200 bps from March'12 onwards

### * Potential triggers

- Wholesale rates coming off will reduce overall funding costs
- Teaser loans shifting to floating rates wef Apr1,2012
- The company indicated it will evaluate raising equity in H2FY12. This will act as a trigger since it will be book value accretive

### ***** Key risks

Asset quality deterioration

#### * Outlook and valuations

- Sustained strong performance will lead to re-rating of the stock
  - Valuation discount vis-à-vis HDFC to narrow down (currently at ~50%)
- Valuations attractive at 1.8x FY13E book and 8.2x earnings, delivering RoEs of ~23%-24%

Financials				
Year to March	FY10	FY11	FY12E	FY13E
Revenues (INR mn)	10,744	16,024	17,628	22,850

PE (x)	15.9	12.5	10.4	8.2
Price to book (x)	3.1	2.5	2.2	1.8
ROAE (%)	23.6	22.3	22.4	23.9

### Petronet LNG

#### * Investment rationale

- Largest domestic player in the business of importing and re-gasifying LNG; backed by strong promoters (IOCL, BPCL, GAIL, ONGC); low risk business model
- With a dip in domestic natural gas production, PLNG is the only way to play the growth in LNG demand
- Operating at >100% capacity (~10.6mmtpa) since last two quarters due to a dip in domestic natural gas output. Capacity utilisation can be further increased by night berthing.
- PLNG is not impacted by INR depreciation and there is no risk to earnings from the same

### * Potential triggers

- Kochi terminal operations which are expected to begin in Q3FY13
- Increase in re-gasification charges from 1st Jan 2012. This will lead to a quarterly EPS increase by INRO.2/share

### * Key risks

• Ramp up in domestic supplies to lead to lower LNG demand, cut in re-gasification charges due to high ROEs and high spot prices may lower LNG demand thus making it unviable for PLNG to source more long term supplies

#### ***** Outlook and valuations

• At CMP of INR156/share, PLNG trades at 11.2x of FY13 EPS

Financials				
Year to March	FY10	FY11	FY12E	FY13E

ROAE (%)	19.2	25.2	33.6	27.3

### ***** Investment theme

- The Cable Digitization Bill passed by the Parliament augurs well for ZEE's subscription revenues
- MediaPro (Star-ZEE JV) is likely to bolster subscription revenues meaningfully from H1FY13 onwards
- ZEE has a strong presence in both Hindi and regional GEC space
- Free cash flow generation remains strong (FCF in FY11 was INR7.2bn)
- Minimal debt levels (INR17mn at FY11 end)

### * Potential trigger

• Potential recovery in ad revenues and market share from H2FY12 onwards

### * Key risks

- Sustained drop in GEC rankings can hamper ad revenues
- Slowdown in ad spends
- Sports losses could be volatile

### * Outlook and valuations

• At CMP of INR118/share, Zee trades at 15.5x of FY13 EPS

### Performance of model portfolio

# Since inception model portfolio has outperformed Nifty by 400 bps

Source: Bloomberg, Edelweiss research

Note: Performance chart since inception on a monthly basis

Our model portfolio has outperformed Nifty in 22 out of 36 months

## Annexure: Model portfolio construction

- # Edelweiss Model Portfolio a long only portfolio benchmarked against Nifty
- * Edelweiss Model Portfolio is constructed using a top down approach. The sector allocations are made based on the conviction level for the respective sector, followed by allocation to individual stocks in each sector
- There is no allocation to cash.
- We assume nil transaction costs.
- Weights are re-assigned for each stock / sector every time we update our view on strategy

This document has been prepared by Edelweiss Securities Limited (Edelweiss). Edelweiss, its holding company and associate companies are a full service, integrated investment banking, portfolio management and brokerage group. Our research analysts and sales persons provide important input into our investment banking activities. This document does not constitute an offer or solicitation for the purchase or sale of any financial instrument or as an official confirmation of any transaction. The information contained herein is from publicly available data or other sources believed to be reliable, but we do not represent that it is accurate or complete and it should not be relied on as such. Edelweiss or any of its affiliates/ group companies shall not be in any way responsible for any loss or damage that may arise to any person from any inadvertent error in the information contained in this report. This document is provided for assistance only and is not intended to be and must not alone be taken as the basis for an investment decision. The user assumes the entire risk of any use made of this information. Each recipient of this document should make such investigation as it deems necessary to arrive at an independent evaluation of an investment in the securities of companies referred to in this document (including the merits and risks involved), and should consult his own advisors to determine the merits and risks of such investment. The investment discussed or views expressed may not be suitable for all investors. We and our affiliates, group companies, officers, directors, and employees may: (a) from time to time, have long or short positions in, and buy or sell the securities thereof, of company (ies) mentioned herein or (b) be engaged in any other transaction involving such securities and earn brokerage or other compensation or act as advisor or lender/borrower to such company (ies) or have other potential conflict of interest with respect to any recommendation and related information and opinions. This information is strictly confidential and is being furnished to you solely for your information. This information should not be reproduced or redistributed or passed on directly in any form to any other person or published, copied, in whole or in part, for any purpose. This report is not directed or intended for distribution to, or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction, where such distribution, publication, availability or use would be contrary to law, regulation or which would subject Edelweiss and affiliates/ group companies to any registration or licensing requirements within such jurisdiction. The distribution of this document in certain jurisdictions may be restricted by law, and persons in whose possession this document comes, should inform themselves about and observe, any such restrictions. The information given in this document is as of the date of this report and there can be no assurance that future results or events will be consistent with this information. This information is subject to change without any prior notice. Edelweiss reserves the right to make modifications and alterations to this statement as may be required from time to time. However, Edelweiss is under no obligation to update or keep the information current. Nevertheless, Edelweiss is committed to providing independent and transparent recommendation to its client and would be happy to provide any information in response to specific client queries. Neither Edelweiss nor any of its affiliates, group companies, directors, employees, agents or representatives shall be liable for any damages whether direct, indirect, special or consequential including lost revenue or lost profits that may arise from or in connection with the use of the information. Past performance is not necessarily a guide to future performance. The disclosures of interest statements incorporated in this document are provided solely to enhance the transparency and should not be treated as endorsement of the views expressed in the report. Edelweiss Securities Limited generally prohibits its analysts, persons reporting to analysts and their family members from maintaining a financial interest in the securities or derivatives of any companies that the analysts cover. The analyst for this report certifies that all of the views expressed in this report accurately reflect his or her personal views about the subject company or companies and its or their securities, and no part of his or her compensation was, is or will be, directly or indirectly related to specific recommendations or views expressed in this report.
