

Bioinformatics Researcher Position Description

Position Title Specialist Bioinformatics Researcher	Job Type Bioinformatics
Division R&D	Description Date June 2016

Accountability Objective

Design and analyze results of genomic next generation sequencing experiments with applications to crop improvement.

Reporting Relationships

Kaiima Research Lab Manager

Principal Accountabilities

- Management of the application design and programming, genomic sequence data management, assembly, analysis and interpretation.
- Deliver data applications, analyses, and visualizations to the research team in a timely manner that facilitates publication of results through electronic and text formats.

Education, Training and/or Experience Required

- Ph.D or M.Sc. in genomics, computational biology or bioinformatics – a must.
- Experience in Plant biology – an advantage
- Outstanding performance with an understanding of genome sequence analysis and bioinformatics, experience in genomic biology, and enthusiasm for working on genomic technologies in a multi-disciplinary environment.
- Strong people leadership capability
- Excellent ability to manage research timelines
