When he falls off a cliff into a ravine, the accident seems almost predestined. Louis miraculously survives - but the family has been shattered. Louis' father has vanished, his mother is paralysed by shock, and Louis lies in a deep coma from which he may never emerge. In a clinic in Provence, Dr Pascal Dannachet tries to coax Louis back to consciousness. [Get Together, Book 4, , David McKeegan, Livia Donnini, Adriana Weigel](#) , 2003, 0194374955, 9780194374958. Virtually everywhere, directly or indirectly, modern men are prepared for war through sport. It has been no different in the past. Throughout history a constant imperative has been a moral commitment to defend the society. Sport has played its part in the inculcation of this commitment. However, sport has also been considered both a substitute for war and an antidote to war. This collection of essays explores the relationship between sport and war, bringing together established authors that include Peter Beck, Hans Bonde, Vassil Girginov, Donald Kyle, J.A. Mangan, John McClelland and Gertrud Pfister, and emerging authors such as Penelope Kissoudi, Orestis Kustrin, Callum McKenzie, Alethea Melling, Hamad Ndee and Roberta Vescovi.

[Regarding Thomas Rowlandson, 1757-1827: His Life, Art and Acquaintance, Matthew Payne, Thomas Rowlandson, James Payne](#) , 2010, 0955406358, 9780955406355. This gripping story of one of the great graphic satirists and watercolor artists of the British School is based upon a mass of new research. Rowlandson kept no diary, wrote few letters, and occurs only infrequently in the memoirs of others. Source material is not abundant. But in more than a decade's research, using church and official records, newspaper reports, contemporary accounts, sales catalogues and consideration of his pictures, the authors shed new light on Rowlandson's family background, his education and art training in London and Paris, his personal and professional associations, his travels in Britain and abroad, and the work itself. Fully illustrated, this major contribution to scholarship will appeal to the general reader and specialist alike and is destined to become the

standard work on this benchmark British artist.

Nicknamed Conejito (little rabbit) when very young, the name sticks. His Indian friends discover, to their surprise, that he is not a little rabbit but more like a mountain lion in the forest when confronted with adversity. The trail to Oregon is constantly challenged by good and evil, love and frustration. Michael comments: "Everyone I meet has a problem and soon it involves me and I get in trouble!" The characters of Conejito are entirely fictional, but the difficulties, troubles and successes were real.

[Cheating at Canasta, William Trevor](#) , 2008, 0141900636, 9780141900636. Cheating at Canasta - an outstanding collection of stories by the master storyteller William Trevor 'There is no better short story writer in the English-speaking world' Wall Street Journal 'No matter what,' Julia had said, aware then of what was coming, 'let's always play cards.' And they did; for even with her memory gone, a little more of it each day - her children taken, her house, her flowerbeds, belongings, clothes - their games in the communal drawing room were a reality her affliction allowed.' A husband sits in Harry's Bar in Venice, thinking of his wife - lost to him now - whose plea has brought him back to one of their favourite haunts. On another table, a young couple quarrel. 'Cheating at Canasta' is the title story of William Trevor's collection, his first since the highly acclaimed *A Bit on the Side*, and its themes of missed opportunities, the inevitability of change and the powerful but fragmentary quality of our memories are entirely characteristic of his unparalleled oeuvre. If you enjoyed *The Story of Lucy Gault* and *Love and Summer*, you will love this book. It will also be adored by readers of Colm Toibin, George Saunders and James Joyce. William Trevor was born in Mitchelstown, County Cork. He has written eighteen novels and novellas, and hundreds of short stories, for which he has won a number of prizes including the Hawthornden Prize, the Yorkshire Post Book of the Year Award, the Whitbread Book of the Year Award and the David Cohen Literature Prize in recognition of a lifetime's literary achievement. In 2002 he was knighted for his services to literature. His books in Penguin are: *After Rain*; *A Bit on the Side*; *Bodily Secrets*; *Cheating at Canasta*; *The Children of Dynmouth*; *The Collected Stories (Volumes One and Two)*; *Death in Summer*; *Felicia's Journey*; *Fools of Fortune*; *The Hill Bachelors*; *Love and Summer*; *The Mark-2 Wife*; *Selected Stories*; *The Story of Lucy Gault* and *Two Lives*.

[Elevator Shoes, Steven Gibbs](#) , 2004, 0595310702, 9780595310708. Along with a nomadic sect of handicapped adults and a lemon-scented train engineer, Daniel Furdman and Barbara Kauff have established a traveling lecture series, where plasma donation is encouraged and Thomas Jefferson is divine. The couple pushes forward a simple approach to living, recommending the Seven Precepts as a healthy alternative to the modern world. With the addition of a locomotive engine, a kidnapping scheme, and a used Honda, "Elevator Shoes" is a suggestive blend of sarcasm and narrative discourse. In Service To One. In Service To All.

[Darwin's Camera: Art and Photography in the Theory of Evolution, Phillip Prodger](#) , 2009, 0199722307, 9780199722303. Darwin's Camera tells the extraordinary story of how Charles Darwin changed the way pictures are seen and made. In his illustrated masterpiece, *Expression of the Emotions in Man and Animals* (1871), Darwin introduced the idea of using

photographs to illustrate a scientific theory--his was the first photographically illustrated science book ever published. Using photographs to depict fleeting expressions of emotion--laughter, crying, anger, and so on--as they flit across a person's face, he managed to produce dramatic images at a time when photography was famously slow and awkward. The book describes how Darwin struggled to get the pictures he needed, scouring the galleries, bookshops, and photographic studios of London, looking for pictures to satisfy his demand for expressive imagery. He finally settled on one of the giants of photographic history, the eccentric art photographer Oscar Rejlander, to make his pictures. It was a peculiar choice. Darwin was known for his meticulous science, while Rejlander was notorious for altering and manipulating photographs. Their remarkable collaboration is one of the astonishing revelations in *Darwin's Camera*. Darwin never studied art formally, but he was always interested in art and often drew on art knowledge as his work unfolded. He mingled with the artists on the voyage of HMS Beagle, he visited art museums to examine figures and animals in paintings, associated with artists, and read art history books. He befriended the celebrated animal painters Joseph Wolf and Briton Riviere, and accepted the Pre-Raphaelite sculptor Thomas Woolner as a trusted guide. He corresponded with legendary photographers Lewis Carroll, Julia Margaret Cameron, and G.-B. Duchenne de Boulogne, as well as many lesser lights. *Darwin's Camera* provides the first examination ever of these relationships and their effect on Darwin's work, and how Darwin, in turn, shaped the history of art.

A tragic accident in 1930 brought the airship's military service to an end, resulting in a tiny window in which they were used and little acknowledgement over the years. [Fetal Alcohol Abuse Syndrome, Ernest L. Abel](#) , 1998, 0306456664, 9780306456664. My initial purpose in writing this book was to offer readers an update of my book Fetal Alcohol Syndrome and Fetal Alcohol Effects (Plenum, 1984), which contained a broad overview of the history (actually the absence of any history) of the awareness of alcohol's teratogenic potential; a review of alcohol's pharmacology, especially with respect to pregnancy; a survey of the physical and behavioral effects of prenatal alcohol exposure; and an overview of the mechanisms suspected of being responsible for those effects. I have omitted most of the previously examined historical and pharmacological information because not much of what was previously discussed needed revision. On the other hand, because much more has been learned about the consequences of prenatal alcohol exposure and its potential mechanisms of action, I have considerably expanded my discussion of these topics. In doing so, I have attempted to include as much new material as possible without (I hope) being overly pedantic and thereby losing the proverbial forest for the trees. No book is ever entirely neutral in the topics it discusses, the issues it raises, or in its conclusions. In sifting through hundreds and oftentimes thousands of articles, writers have to choose which facts to emphasize and which to ignore. Every idea cannot be chronicled and every article cannot (and should not) be cited. In going about the business of picking and choosing, however, a writer has an obligation to present the arguments for and against a particular conclusion.

[Autism as an Executive Disorder, James Russell](#) , 1997, 0198523491, 9780198523499. Autism continues to fascinate researchers because of its debilitating effects and its complex nature and origins. The prevalent theory is that autism is characterized by difficulties in understanding mental concepts, but the contributors to this book present arguments for an alternative theory. Their research points strongly to the idea that autism is primarily a disorder of "executive functions", those involved in the control of action and thought. They emphasize the importance of the behavioral rigidity that arises in autism, such as resistance to change and obsession with regularity. The book provides a new and controversial perspective from some of the leading researchers in this field; it will interest psychologists and clinicians working to understand this disabling and baffling condition.

In doing so, the report provides a snapshot of a local community at a time where specific and difficult issues were being encountered. The report has been prepared consistent with the Victorian Equal Opportunity and Human Rights Commission (Commission) responsibilities to seek to undertake research to reduce discrimination under section 162 of the Equal Opportunity Act 1995 (Vic) (EOA) and to gather information from the community in line with its responsibilities to administer the Racial and Religious Tolerance Act 2001 (Vic) (RRTA). Consistent with the Commission's responsibilities under the Charter of Human Rights and Responsibilities Act 2006, the report examines the issues raised using a human rights framework to describe and analyse the factors young people report as impacting upon their daily lives. In response to community requests, the report's primary purpose is to provide a voice for Australian-Sudanese young people. Accordingly, the research methodology was grounded in the active participation of community members, consistent with a human rights framework and their right to public participation.

[The Ripple Effect: The Fate of Freshwater in the Twenty-First Century, Alex Prud'homme](#) , 2012, 1416535462, 9781416535461. AS ALEX PRUDHOMME and his great-aunt Julia Child were completing their collaboration on her memoir, My Life in France, they began to talk about the French obsession with bottled water, which had finally spread to America. From this spark of interest, Prudhomme began what would become an ambitious quest to understand the evolving story of freshwater. What he found was shocking: as the climate warms and world population grows, demand for water has surged, but supplies of freshwater are static or dropping, and new threats to water quality appear every day. The Ripple Effect is Prudhomme's vivid and engaging inquiry into the fate of freshwater in the twenty-first century. The questions he sought to answer were urgent: Will there be enough water to satisfy demand? What are the threats to its quality? What is the state of our water infrastructure—both the pipes that bring us freshwater and the levees that keep it out? How secure is our water supply from natural disasters and terrorist attacks? Can we create new sources for our water supply through scientific innovation? Is water a right like air or a commodity like oil and who should control the tap? Will the wars of the twenty-first century be fought over water? Like Daniel Yergin's classic *The Prize: The Epic Quest for Oil, Money & Power*, Prudhomme's *The Ripple Effect* is a masterwork of investigation and dramatic narrative. With striking instincts for a revelatory story, Prudhomme introduces readers to an array of colorful, obsessive, brilliant and sometimes shadowy characters through whom these issues come alive. Prudhomme traversed the country, and he takes readers into the heart of the daily dramas that will determine the future of this essential resource—from the alleged murder of a water scientist in a New Jersey purification plant, to the epic confrontation between salmon fishermen and copper miners in Alaska, to the poisoning of Wisconsin wells, to the epidemic of intersex fish in the Chesapeake Bay, to the wars over fracking for natural gas. Michael Pollan has changed the way we think about the food we eat; Alex Prudhomme will change the way we think about the water we drink. Informative and provocative, *The Ripple Effect* is a major achievement.

Written for calculus-inclusive general chemistry courses, Chemical Principles helps students develop chemical insight by showing the connections between fundamental chemical ideas and their applications. Unlike other texts, it begins with a detailed picture of the atom then builds toward chemistry's frontier, continually demonstrating how to solve problems, think about nature and matter, and visualize chemical concepts as working chemists do. Flexibility in level is crucial, and is largely established through clearly labeling (separating in boxes) the calculus coverage in the text: Instructors have the option of whether to incorporate calculus in the coverage of topics. The multimedia integration of Chemical Principles is more deeply established than any other text for this course. Through the unique eBook, the comprehensive ChemPortal, Living Graph icons that connect the text to the Web, and a complete set of animations, students can take full advantage of the wealth of resources available to them to help them learn and gain a deeper understanding.

[Fraser, E. Matthews](#) , 1997, 0198152299, 9780198152293. The Lexicon of Greek Personal Names, a major project of the British Academy, offers scholars a fully documented listing of all known personal names from the ancient Greek world. It draws on all the available evidence, primarily inscriptions but also literature, papyri, coins, vases and other artefacts; chronologically it ranges from the earliest times (though excluding Mycenaean names) to about AD 600. It has benefited from the collaboration of scholars in many countries. It is intended to form the basis of a wide range of historical, philological, and literary research. The present volume, III.A, presents the onomastic material from the Peloponnese, Western Greece, Sicily, and Magna Graecia, the last area offering for the first time a substantial number of Greek names in Latin. It continues the series begun with Volume I, The Aegean Islands, Cyprus, and Cyrenaica, and Volume II, Attica.

[Multi-Stage Space Guns, Micro-Pulse Nuclear Rockets, and Faster-Than-Light Quark-Gluon Ion Drive Starships, Stephen Blaha](#) , 2013, 098455307X, 9780984553075. This book proposes a long-term space program for solar system exploration and travel to the stars in an aggressive, cost-effective way. It develops a new multi-stage space gun to shoot large payloads cheaply into space up to 150+ kilometers. It proposes new types of nuclear rockets for cost-effective exploration in the solar system, and eventually for use on starships - "short range" nuclear rockets for the Solar System, and "long shelf life" nuclear rockets for starships. Also, it describes long shelf life nuclear reactors of new design that have hitherto not been developed. Most importantly, the book develops detailed, faster-than-light starship designs (qualitatively in the text - no math, and mathematically in appendices). The key to faster-than-light starships is a faster-than light ion thrust generated by quark-gluon plasmas. This book describes how quark-gluon plasmas can be created in high energy ion collisions and how they might be used for starship propulsion. Several possible starship designs are discussed in detail as well as a mechanism for artificial gravity for disc shaped and cigar shaped starships.

[Introduction to International Relations, Robert H. Jackson, Georg Srensen](#) , 1999, 0198781954, 9780198781950. The end of the Cold War has provoked an explosive increase in theories, concepts, and debates in the discipline of International Relations. There is growing confusion as to what are the important issues and what are the best ways of approaching them. This book is unique in providing a systematic introduction to principal theories in IR, including 'post-positivist' theories which have gained prominence in recent years. The strengths and weaknesses of each theory are critically examined and the main points of contention between the theories are thoroughly discussed. The text contains a

large number of empirical illustrations which demonstrate the link between theory and actual events. The book provides a rapid entry into the discipline of IR. Each chapter begins with a brief summary, and ends with a list of key points, study questions, and a guide to further reading. Jackson and Sorensen offer the ideal introduction to this important subject, enabling students to master IR as a discipline rather than merely study current events.

[Selected prose, Ronald Stuart Thomas](#) , 1995, 1854111043, 9781854111043. R. S. Thomas is Wales's most eminent poet in the English language, and one of the most acclaimed poets writing in Britain today. Since 1946 he has published twenty-six collections of poetry including his massive Collected Poems in 1993. His poems and books have won many prizes including the Queen's Gold Medal for Poetry in 1964. Thomas's growing influence on modern poetry has been considerable. This is a result of the poems themselves: Thomas remains a largely private figure, living on the island Anglesey, content to let his writing speak for itself. Thomas's occasional prose writings have consequently been of great importance, providing a glimpse into the craft of his poems and their concerns. Selected Prose is the only book to collect some of his scattered prose in both languages, many Welsh language articles appearing in translation for the first time. It is a varied selection, both creative and critical, aiming to reflect the major preoccupations of Thomas and his poetry: religion and theology; Wales and its topography; Welsh Nationalism and the language; Nature and the countryside; the poet and his craft. It includes also the translated transcript of an autobiographical radio broadcast.

Medication Management in Care of Older People is an accessible introduction to medication management and its role in the management of older people and their medicines. It addresses key issues in medication management, evaluates professional roles and clinical practice initiatives and explores healthcare policy and prescribing initiatives. This text explores the biology and neurobiology of ageing, pathological conditions such as Parkinsons and Alzheimers disease, medication errors, issues of concordance, long term conditions and the older person, the principles of applied pharmacology and its relationship to older people. Medication Management in Care of Older People will be of interest to health care professionals who either have an interest in medication management and older people, or who are qualified independent or supplementary prescribers, and will enable them to comprehend the principles of applied pharmacology and medication management to enable them to use this knowledge in their daily practice. Illustrates the current issues, concerns and approaches used to manage older people and their medicines. Builds on pertinent current policy and research initiatives including the NSF for Older People and 'Building a Safer NHS for Patients: the role of medication safety' Each chapter features case studies, learning outcomes and implications for practice I found this book to be interesting and highly relevant to OT practice. I would recommend this book as a learning resource to inform, review and support clinical therapy practice. Occupational Therapists could well appreciate many of the contributory factors relating to medication problems with Older People, using this resource could raise own standards, but also assist with reducing the negative impacts of medication issues on older people. - Sarah Montgomery, A&E Occupational Therapist and Communications Officer, (COT Specialist Section Older People), London, UK

That is one of the theories of memory presented in this intriguing and splendidly readable book, which distills three researchers' inquiries into the processes that enable us to recognize a face that has aged ten years or remember a melody for decades. Ranging from experiments performed on the "wetware" of the brain to attempts to re-create human cognition in computers, *In the Palaces of Memory* is science writing at its most exciting.

[Solo in the Seventies: John, Paul, George and Ringo: 1970 -1980, Bemis Publishing Group](#) , 2013, . The decade after the Beatles' split gets a second look... In 2010, Robert Rodriguez's Fab Four FAQ 2.0: The Beatles 1970-1980 told the story of the ex-band mates during the first ten years after calling it quits, detailing efforts to establish four separate artistic identities while laboring in the shadow of their glorious collective past; all the while facing the inevitable query, "So when are the Beatles getting back together?" But while 2.0 covered an enormous amount of ground, there were still more stories to tell: John's fight to stay in America against the forces of Nixon Administration; the lawsuits against their business allies-and each other; unreleased recordings; the promo films; album art; covers of ex-Beatle music by other artists (as well as covers by ex-Beatles of other artists' material); bootleg releases and many more subjects. In Solo in the 70s, you'll learn about their people: producers and engineers they worked with; up-and-comers branded as "the new Beatles;" proteges; friends and associates, and a roll call of deaths in the "family." Putting it all in perspective is a 30,000 word day-by-day timeline, contextualizing rock's evolution throughout the 1970s, ending with the death of John Lennon. See for yourself the peers and artistic rivals the ex-Beatles worked alongside while crafting their art and how it all fit together. Solo In The 70s is a welcome addition to the Beatles' reference canon. Richly illustrated with period ephemera, it draws the reader into the world that fans inhabited back in the day. Whether you're seeking to learn more about the post-break-up era or want to revisit a glorious time when four ex-Beatles were creating new music worthy of their legacy, Solo In The 70s puts this unsung era into focus.

[Constitution 2000: a federalist proposal for the next century, Edwin L. Wade](#) , 1995, 0964737256, 9780964737259. This book makes the case for a return to Federalist principles. In 1776, our forefathers rebelled against BIG government. They threw off the yoke of British monarchy. Then in 1787, our forefathers rebelled against WEAK government. They put an end to the embarrassment known as the ARTICLES OF CONFEDERATION & replaced it with a Constitution that for the first time established a truly national government. Americans today often confuse the two revolutions. We have a Congress that is the size of a small city, a Presidency that has been emasculated, a federal court system that is about to drown in a torrent of trivia, a central bank that is privately owned yet governs economic policy making, & a Supreme Court that equates free speech with big-time spending. This book proposes to cut Congress in half, to restore the Presidency, to provide ready access to justice in our federal courts, to fence in the Federal Reserve System, & to make free speech truly free. It proposes a constitutional convention & eleven amendments designed to bring those reforms about. It concludes with an open letter to George Washington. Complete ordering information will be announced in October.

[So You Don't Want to Go to Church Anymore: An Unexpected Journey, Wayne Jacobsen, Dave Coleman](#) , 2008, 1935170015, 9781935170013. Jake Colsen, an overworked and disillusioned pastor, happens into a stranger who bears an uncanny resemblance (in manner) to the apostle John. A number of encounters with John as well as a family crisis lead Jake to a new understanding of what his life should be like: one filled with faith bolstered by a steady, close relationship with the God of the universe. Facing his own disappointment with Christianity, Jake must forsake the habits that have made his faith rote and rediscover the love that captured his heart when he first believed. Compelling and intensely personal, SO YOU DON'T WANT TO GO TO CHURCH ANYMORE relates a man's rebirth from performance-based

Christianity to a loving friendship with Christ that affects all he does, thinks, and says. As John tells Jake, "There is nothing the Father desires for you more than that you fall squarely in the lap of his love and never move from that place for the rest of your life."

Computer simulation techniques are now having a major impact on almost all areas of the physical and biological sciences. This book concentrates on the application of these methods to inorganic materials, including topical and industrially relevant systems including zeolites and high Tc superconductors. The central theme of the book is the use of modern simulation techniques as a structural tool in solid state science. Computer Modelling in Inorganic Crystallography describes the current range of techniques used in modeling crystal structures, and strong emphasis is given to the use of modeling in predicting new crystal structures and refining partially known structures. It also reviews new opportunities being opened up by electronic structure calculation and explains the ways in which these techniques are illuminating our knowledge of bonding in solids. Key Features* Includes a thorough review of the technical basis of relevant contemporary methodologies including minimization, Monte-Carlo, molecular dynamics, simulated annealing methods, and electronic structure methods* Highlights applications to amorphous and crystalline solids* Surveys simulations of surface and defect properties of solids* Discusses applications to molecular and inorganic solids

[The Public Law of Government Contracts, Anne C. L. Davies](#) , 2008, 0199287392, 9780199287390. Contract plays a vitally important role in the delivery of public services today. Both central and local governments make extensive use of private firms to provide facilities, goods, and services. Government contracts vary considerably from the relatively straightforward competitive procurement of office supplies, to complex, long-term arrangements in which the contractor

researches and develops a new piece of military equipment, or builds and provides a fully-serviced hospital over a thirty-year period. English law's traditional approach to government contracts has been to regard them as ordinary private law arrangements. As a result, they have understandably been neglected by public lawyers in both teaching and research. This book argues that, on closer inspection, constitutional and administrative law (in the form of statute, common law, and government guidance) have been playing an increasingly important role in the regulation of certain key aspects of government contracting. The book analyzes these public law elements in detail and suggests ways in which they might appropriately be developed more fully, in tandem with the underlying private law regime. The book's aim is to raise the profile of government contracts as a proper subject for public law scholarship, whilst at the same time contributing to important contemporary debates on issues such as the public vs. private divide, the scope of the judicial review jurisdiction, and the reach of the Human Rights Act 1998.

The Clear, Well-Organized Introduction to Thermodynamics Theory and Calculations for All Chemical Engineering Undergraduate Students This text is designed to make thermodynamics far easier for undergraduate chemical engineering students to learn, and to help them perform thermodynamic calculations with confidence. Drawing on his award-winning courses at Penn State, Dr. Themis Matsoukas focuses on why as well as how. He offers extensive imagery to help students conceptualize the equations, illuminating thermodynamics with more than 100 figures, as well as 190 examples from within and beyond chemical engineering. Part I clearly introduces the laws of thermodynamics with applications to pure fluids. Part II extends thermodynamics to mixtures, emphasizing phase and chemical equilibrium. Throughout, Matsoukas focuses on topics that link tightly to other key areas of undergraduate chemical engineering, including separations, reactions, and capstone design. More than 300 end-of-chapter problems range from basic calculations to realistic environmental applications; these can be solved with any leading mathematical software. Coverage includes * Pure fluids, PVT behavior, and basic calculations of enthalpy and entropy * Fundamental relationships and the calculation of properties from equations of state * Thermodynamic analysis of chemical processes * Phase diagrams of binary and simple ternary systems * Thermodynamics of mixtures using equations of state * Ideal and nonideal solutions * Partial miscibility, solubility of gases and solids, osmotic processes * Reaction equilibrium with applications to single and

[Psychology in Human Context: Essays in Dissidence and Reconstruction, Sigmund Koch](#) , 1999, 0226449300, 9780226449302. Sigmund Koch (1917-1996) was one of the twentieth century's most penetrating and wide-ranging critics of the scientific ambitions of psychology. Writing in a style sometimes scathing, sometimes witty, always lucid, he decried any psychology that attempted to eradicate the human dimension from the study, scientific and otherwise, of human experience and action. A philosopher and humanist by nature, Koch also sought to change the multifaceted field of psychology by moving it closer to the humanities and arts. The broad scope of essays in Psychology in Human Context which began as the basis for the eagerly anticipated postscript to Koch's seminal Psychology: A Study of a Science reveals his writings to be as fresh and relevant today as ever. Carefully edited by two of Koch's close associates, this collection places psychological and philosophical issues in the context of twentieth-century thought and provides intellectual and moral signposts for future travelers in what Koch regarded as the irreducibly rich and human realm of the psychological studies. Sigmund Koch was University Professor of Psychology and Philosophy at Boston University, the editor of the landmark six-volume series Psychology: A Study of a Science (1959-1963) and coeditor of A Century of Psychology as Science. He served as the president of three divisions of the American Psychological Association and was director of the Ford Foundation program in the Humanities and the Arts (1964-1967).

[Beside the Troubled Waters: A Black Doctor Remembers Life, Medicine, and Civil Rights in an Alabama Town, Sonnie W. Hereford](#) , 2011, 081731721X, 9780817317218. Beside the Troubled Waters is a memoir by an African American

physician in Alabama whose story in many ways typifies the lives and careers of black doctors in the south during the segregationist era while also illustrating the diversity of the black experience in the medical profession. Based on interviews conducted with Hereford over ten years, the account includes his childhood and youth as the son of a black sharecropper and Primitive Baptist minister in Madison County, Alabama, during the Depression; his education at Huntsvilles all-black Councill School and medical training at Meharry Medical College in Nashville; his medical practice in Huntsvilles black community beginning in 1956; his efforts to overcome the racism he met in the white medical community; his participation in the civil rights movement in Huntsville; and his later problems with the Medicaid program and state medical authorities, which eventually led to the loss of his license. Herefords memoir stands out because of its medical and civil rights themes, and also because of its compelling account of the professional ruin Hereford encountered after 37 years of practice, as the end of segregation and the federal role in medical care placed black doctors in competition with white ones for the first time.

[The Silver Flyer: A Charleston Christmas Story, Lawrence Anderson Armstrong](#) , 2005, 0965362434, 9780965362436. "In the year of Our Lord nineteen hundred and fifty-eight, a time which will never come again, in a country which will never exist again, a miracle took place..." so begins THE SILVER FLYER, A CHARLESTON CHRISTMAS STORY. Lawrence Anderson Armstrong has created a masterful work in which harsh reality and the quirky effervescence of fate intertwine the lives two boys, their absent father and the spirit of Christmas. The beautiful old city of Charleston, South Carolina, where Lawrence Anderson Armstrong was born and grew-up, provides a Dickensian atmosphere as the story moves through the city on Christmas Eve. The characters Jack and Harry are vividly drawn. They seem to have stepped off the pages of a Damon Runyon story as tough guys with hearts of gold. Old Simon Brewer and Joe Sams add the grace and wisdom of the ages seeing life from the downward curve. Axel Caine is the vicious, heartless villain that keeps the reader wondering what will happen next. If you loved IT'S A WONDERFUL LIFE, THE BEST CHRISTMAS PAGEANT EVER, MIRACLE ON 34TH STREET, and THE MIRACLE AT MOREAU, then THE SILVER FLYER is a must have book to capture the spirit of Christmas.

[Modern Geometries: Non-Euclidean, Projective, and Discrete, Michael Henle](#) , 2001, 0130323136, 9780130323132. Engaging, accessible, and extensively illustrated, this brief, but solid introduction to modern geometry describes geometry as it is understood and used by contemporary mathematicians and theoretical scientists. Basically non-

Euclidean in approach, it relates geometry to familiar ideas from analytic geometry, staying firmly in the Cartesian plane. It uses the principle geometric concept of congruence or geometric transformation--introducing and using the Erlanger Program explicitly throughout. It features significant modern applications of geometry--e.g., the geometry of relativity, symmetry, art and crystallography, finite geometry and computation. Covers a full range of topics from plane geometry, projective geometry, solid geometry, discrete geometry, and axiom systems. For anyone interested in an introduction to geometry used by contemporary mathematicians and theoretical scientists.

[Military Aircraft of The 1960s, Gerry Manning](#) , 2006, 1857802438, 9781857802436. The 1960s was an era in which many countries still had large air forces flying a wide range of aircraft, and often they were decked out in very colorful markings. Compared to the grey aircraft of today, military aircraft in the 1960s were a kaleidoscope of colors. During that decade, Gerry Manning was busily traveling and recording a large archive of color images of military aircraft of the time, and the images in this book are drawn from that archive. Includes a wide variety of aircraft from the Royal Air Force, as well as several aircraft from the United States, NATO, and unaligned countries including Belgium, Canada, Denmark, France, Finland, Holland, Germany, Jordan, Malaysia, Norway, Portugal, Saudi Arabia, Sweden, and Switzerland.

[Too Much Tuscan Sun: Confessions of a Chianti Tour Guide, Dario Castagno](#) , 2004, 0762736704, 9780762736706. Over the past several years, "the American in Tuscany" has become a literary subgenre. Launched by the phenomenal success of Frances Mayes's *Under the Tuscan Sun*, bookstores now burgeon with nimble, witty accounts of this clash in cultures--Americans trying to do American things in Italy and bumping against a brick wall of tradition. Before this subgenre exhausts itself, it's only fair that we hear the other side of the story--that of a native Tuscan and of dozens of Americans who have stormed through his life and homeland, determined to find in it whatever they are looking for, whether quaintness or wisdom, submission or direction. There is no one better to provide this view than Dario Castagno. A Tuscan guide whose client base is predominantly American, Dario has spent more than a decade taking individuals and small groups on customized tours through the Chianti region of Tuscany. Reared in Britain through early childhood, he speaks English fluently and is therefore capable of fully engaging his American clients and getting to know them. *Too Much Tuscan Sun* is Dario's account of some of his more remarkable customers, from the obsessive and the oblivious to the downright lunatic. It is also a primer on Tuscany--its charms and its culture. Structured around a typical Tuscan year, Dario takes us through the sights, smells, and sounds of Chianti during each of the twelve months, including the festivities and pageantry that accord with the season, most notable the Palio--the bareback horse race that consumes the social energies of the people of Siena for all of July and August. Dario also intersperses an account of his own life and times--that of a transplanted British "little lord" who learns to love the wilds of Chianti; of his discovery and adoption of abandoned peasant farmhouses; of his apprenticeship in the wine industry; and of his arduous transformation from bohemian layabout to thriving Tuscan guide. But the bulk of the book is devoted, with humor and affection, to the Americans he has met--the vain, the silly, the ignorant, the ambitious, the horny, the condescending, the charming, and the outright pathological. Some of them have made his life hell and live in his nightmares; others became lifelong friends.

[Saracens, Demons, & Jews: Making Monsters in Medieval Art, Debra Higgs Strickland](#) , 2003, 0691057192, 9780691057194. During the crusades, Ethiopians, Jews, Muslims, and Mongols were branded enemies of the Christian majority. Illustrated with strikingly imaginative and still disturbing images, this book reveals the outrageously pejorative ways these rejected social groups were represented--often as monsters, demons, or freaks of nature. Such monstrous images of non-Christians were not rare displays but a routine aspect of medieval public and private life. These images, which reached a broad and socially varied audience across western Europe, appeared in virtually all artistic media, including illuminated manuscripts, stained glass, sculpture, metalwork, and tapestry. Debra Higgs Strickland introduces and decodes images of the "monstrous races," from demonlike Jews and man-eating Tartars to Saracens with dog heads or animal bodies. Strickland traces the origins of the negative pictorial code used to portray monsters, demons, and non-Christian peoples to pseudoscientific theories of astrology, climate, and physiognomy, some dating back to classical times. She also considers the code in light of contemporary Christian eschatological beliefs and concepts of monstrosity and rejection. This is the first study to situate representations of the enemies of medieval Christendom within the broader cultural context of literature, theology, and politics. It is also the first to explore the elements of that imagery as a code and to elucidate the artistic means by which boundaries were effectively blurred between imaginary monsters and rejected social groups.
