

# New UMA profiles in progress, from industry back into the WG

Alec Laws  
17 Feb 2021

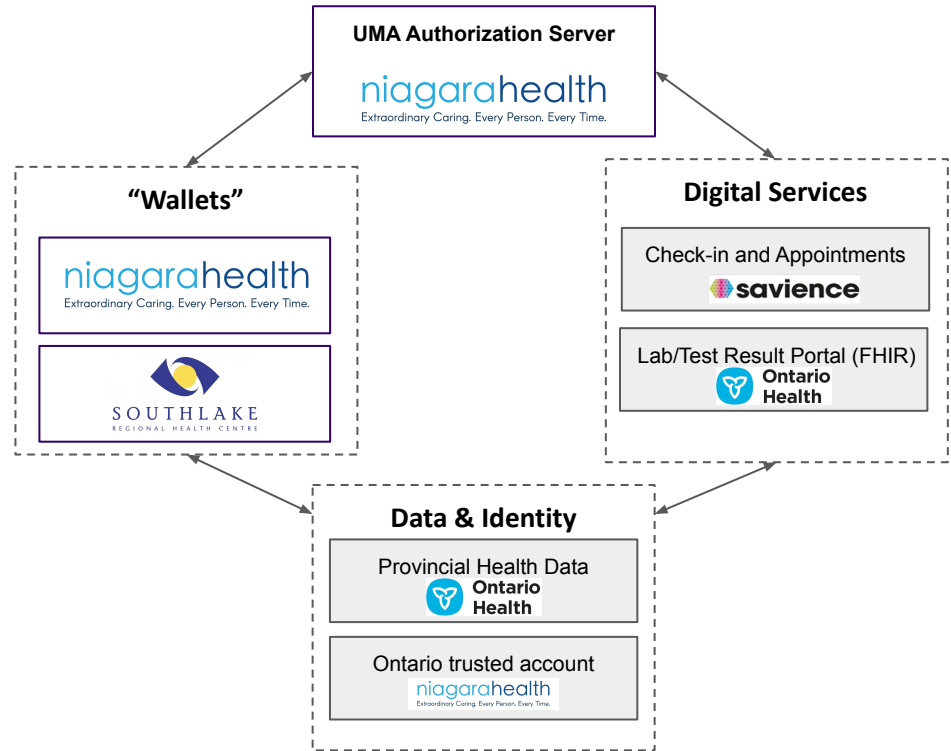

# UK Pensions Dashboard

- UK Pension Holders can
  - discover and protect pension resources
  - see a single dashboard of all pensions
  - delegate access to advisors
- Created by Origo

# Ontario trusted account

- Ontario Health Card Holders can
  - create a verified identity resource and protect it at an UMA AS
  - discover and protect their health information from a single place
  - digitally access personal health information

# Common Themes

UMA as 'trusted infrastructure' for an ecosystem

Need for verified user identity

Need to help discover resources in order to protect them

Want to provide a dashboard/wallet to manage connections + policy

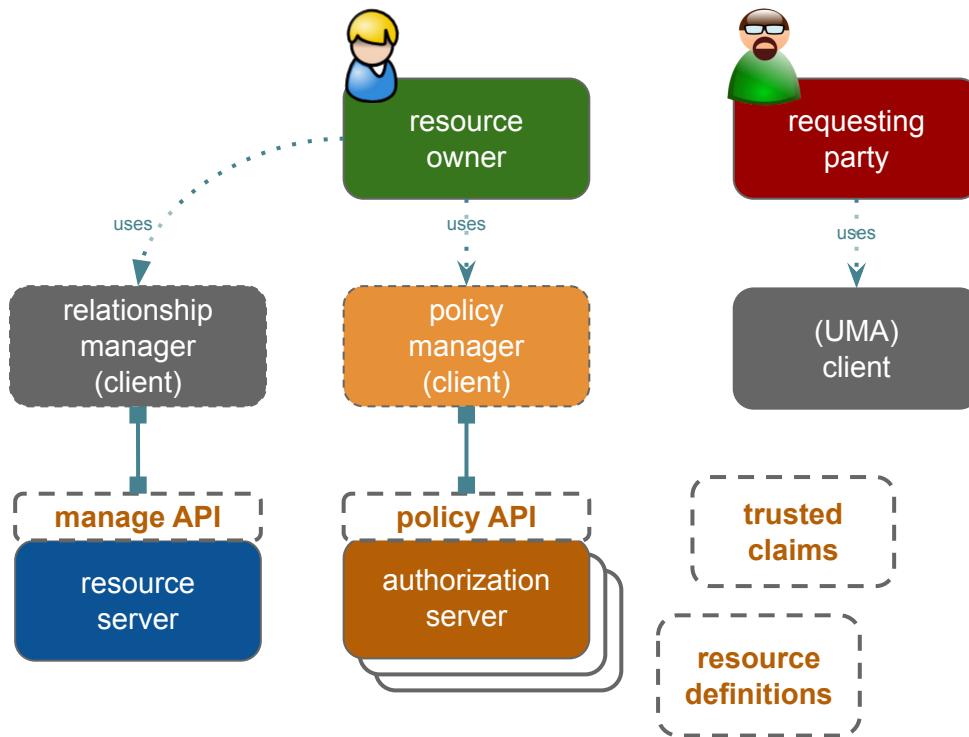

# Leads to New Work

**Policy Manager extension:** AS can delegate policy handling; RO can choose how to manage policy; RO can aggregate management across AS's at one trusted place

**Manage API extension (TBD):** RO can manage details of resource registration in an interoperable way

**Resource definitions (extension? TBD):** RS can register API resource and scope templates for UMA clients to follow, to increase interop as well as extent of AS abilities to manage client communities of trust

**Trusted claims (TBD):** AS delegates claims collection about RqP to other AS's in an interoperable way, with predictable set math

# Thanks!

Q & A?
