Sector Maker Program:

[Contact US](#)

Sector maker is a FREE MapBasic tool that takes your antenna information and turns it into a Mapinfo layer

Step 1: your information must contain the following

- Cell number (any integer)
- Cell name (up to 255 characters)
 - Latitude decimal
 - Longitude decimal
- Sector number (0-6)
- Antenna Beam width (1-360)
- Antenna azimuth (0-360)

This information can be in any order and can be include in with other information.

Step 2: Import you data into MapInfo and leave the table open

Step 3: Go to the menu bar chose OCG-Tools/ Sector maker
