iOS Developer Contract Begins January 9th, 2017

Project Overview

Clearform seeks an iOS developer experienced in Objective-C / Swift to build a native version of a simple barcode scanning application.

The current version is compiled from Cordova (HTML/CSS), and represents the complete behavior we want in a native app.

Project Guide

This project to last around three weeks. At the kickoff meeting, we'll provide complete design assets and the API docs.

You'll need to implement and customize a barcode scanning library such as MTBBarcodeScanner to be successful. We'll provide support, and work through two rounds of QA to get the app polished.

Follow-on Work

We'll have additional features to add down the line and we're open to continuing to working with the you. At the start, however, this app must have a clean, well-organized code base any professional could work from.

Requirements

- Experience building native iOS apps quickly and effectively
- Appreciation for iOS-specific user experience details
- Solid code management practices using git on a team
- Up-to-date on Objective-C / Swift development best practices

About Working at Clearform:

We are a tight-knit team committed to ensuring each member is a key contributor. We support that by fostering a collaborative work environment and entrepreneurial spirit throughout the organization. As key contributors, we are also dedicated to promoting a team that embraces accountability and integrity.
