

Statement of Accountability

This is to confirm my stated position that the wireless technology, known as Wi-Fi, that has been proposed, and approved, for installation in Langley Fine Arts School is, in my informed opinion, safe for human health.

I have been informed of the research indicating serious biological harm that can result from the radiation emitted from this kind of wireless system. I am aware that wireless communication technology was never pre-market tested for safety; that there is no government or industry post-market surveillance, and that the government safety standards are not based on this kind of radiation [they are based on thermal exposure – like from microwave ovens – not on this exposure from wireless communication systems]. The Health Canada Safety Code 6 “safe” levels have been shown to cause significant damage to human cells.

And I am confident that there are no significant health risks with this technology to any adult, child, or animals, within _____ (*please state the proven safe distance*) of this wireless system.

(If you have seen a signed assurance of the safety of radio frequency electromagnetic radiation known as Wi-Fi wireless internet technology from a medical expert with recognized expertise in the health effects of wireless communication systems, please list his or her name and credentials:

_____.)

The main reason (s) I have recommended that this installation be implemented is:

_____.

The main reason I do not advocate the fibre optic cable or other installation that has been suggested as a safer solution is _____.

This is to verify that any adverse health effects attributed to this Wi-Fi in Langley Fine Arts School will be covered by our insurance policy provided by: _____.

Your name: (*Please print*) _____
