

Cell Phones Destroying Brains & Biosphere

Posted by: Lloyd Kinder

Date: Sun Feb 17, 2008 5:32 pm ((PST))

- I just found a lot of evidence that cell phones and cordless phones etc are much more dangerous than I imagined. In 2 years, by 2010, Dr. Mercola estimates there will be 300,000 or more new cases of brain tumors caused by cell phones and the rate will increase rapidly. Other cancers, like leukemia, early senility and many other ailments are likely to increase at a similar rate. - LK

MICROWAVE SYNDROME

The Freiburger Appeal is a document signed by over 2000 German medical doctors, at UGUMED, in October 2002. It describes microwave sickness caused by wireless transmitters, mobile phones, WiFi and so on. The doctors said they are observing a "dramatic rise in severe and chronic diseases", which they call microwave syndrome. Some of the more serious symptoms are sleep disruption, headaches [often severe], depression, anxiety, forgetfulness, fatigue, CFS, heart disease, weakened immunity, lingering infections, allergic reactions, hypoxia, mitochondria dysfunction, depolarization of red blood cells, leukemia, brain tumors, degenerative brain disorders, senility due to leakage in the blood brain barrier, autism, unexplained pain and internal bleeding.

EARLY MENTAL DECLINE

- Amy Worthington, The Idaho Observer, 6-9-6, <http://idaho-observer.com> -

- In 2001, Japanese doctors reported that a growing number of people in their 20s and 30s are suffering from severe memory loss and impaired judgment. "Young people today are becoming stupid," said a Japanese professor of neurobiology.(71) "Microwave radiation is about to turn young cell phone users into premature senile weaklings within this decade", said Dr. Miguel Muntané of Spain.

- A literacy study conducted in 2005 on 19,000 young Americans is sobering. Only one in three recent American college grads can read a complex book and extrapolate from it. An overwhelming majority of college students are unable to understand arguments in a newspaper editorial or to comprehend a simple comparison table. Researchers, nevertheless, pronounced these pathetically impaired students to be more "intelligent" than the average American adult.(72) While commentators attribute this shocking state of functional decay to a literacy problem, it is more likely the sad fate of a generation that has recklessly irradiated itself for a decade. Have these young adults simply erased their intellectual hard drives?

- Cell phone radiation causes deficiency in the motor function, memory and attention required to drive safely, according to insurance studies in England.(73)

MICROWAVE ADDICTION

- Amy Worthington, The Idaho Observer, 6-9-6, <http://idaho-observer.com>
- One of the most tragic realities of our time is the fact that microwave radiation, like nicotine, stimulates the pleasure centers of the brain. In the 1980s, University of Washington researchers found that radio frequency radiation activates endogenous opioids, compounds generated by the brain which behave like morphine.(113) In 1996, researchers found that pulsed telephone microwaves have a hypnotic effect on the brain.(114) In 1999, the Observer newspaper in London cited a study which found that cell phone radiation stimulates production of morphine-like chemicals in the brain and that the "high" is triggered by endorphin release when radiation from the phone enters through the ear.(115) It is also relevant that an increase in endogenous opioid activity in the brain caused by microwave radiation is known to increase alcohol-drinking behavior.(116)
- Observations confirm our suspicion that a sizeable percentage of our population, especially teenagers and young women of child-bearing age, seem literally "stoned" on microwaves, much to the economic advantage of those who conspired to hook them. Cell phone dependency is known as "compulsive communicating." Chain dialers connect continually to get another "fix." A striking example of possible psycho-emotional addiction was the young female bank robber who calmly robbed four Northern Virginia banks in late 2005 while she was immersed in cell phone chats.(117) An article in the British Medical Journal noted that mobile phones are replacing nicotine as the foremost addictive obsession in Great Britain.(118) Seventy-five percent of Brit teenagers said they literally could not bear to be without their phone.(119) Recent studies in the U.S. and South Korea reveal that teens who are heavily cell-phone obsessed are often depressed or anxious, not surprising since microwave radiation has a proven impact on mood and emotion.(120)
- Since the advent of mobile phones, brain tumors have become the

number two cause of death in children, followed by leukemia.

WILDLIFE

- Disappearing bees, bugs, birds, frogs and other wildlife has been reported. Naturally, they would be just as vulnerable to EMR [electromagnetic radiation] as are humans. There may be connections to global warming as well. See <http://freewebs.com/emr2>.

EARLY EXPERIMENT

- Amy Worthington, The Idaho Observer, 6-9-6, <http://idaho-observer.com>
- Beginning in 1953 and continuing into the 1970s, the Russian Soviets used microwave radiation to sicken and stupefy [U.S.] embassy staff [in Moscow]. Two consecutive U.S. ambassadors died of cancer and a third developed a leukemia-like blood disease and bleeding eyes. At least 16 women in the embassy group developed breast cancer. Breast, eye and testicle tissues are the most sensitive to radiation. Many staffers also suffered immune system disorders, high white blood cell counts, chromosomal breaks, chronic fatigue, blurred vision, cataracts and muscle aches. Such conditions are known collectively as Microwave Syndrome. (16) ...
- Microwaves [and RF are now used as] weaponry, such as the grotesque RF "poppers" currently being used against the Iraqi people, (20) and the deadly 95-gigahertz active denial systems prepared for both the military and domestic law enforcement. (21)

- The Russians targeted the Moscow embassy staff with 2.4 gigahertz microwaves, the same frequency blasting out of the wireless cell phones, in-house cordless phones, wireless computers and WLAN systems now irradiating bodies, homes, work places and schools across America. Some phones are excreting 5.8 gigahertz, which is even more powerful than 2.4 gigahertz.
- The Russians mainly used a power density of only 5 microwatts per [square] centimeter (cm²) which they aimed at the west facade of the embassy building. Most of the people inside the building received about 1/50 [or 2%] of that amount, or [one tenth] microwatt per cm² [Modern cellphones use about 6 tenths microWatts when on high power; that's 6 times the power of the embassy exposure]. The Federal Communications Commission has set an ambient microwave exposure "safety" limit of 580 microwatts per cm², which enables government and industry to irradiate us with over 100 times the power density used against the Moscow embassy officers and staff.
- The Russians beamed microwaves at the embassy only nine hours a day, unlike cell tower and roof top transmitters and WLAN systems which blast megahertz and gigahertz into American homes, neighborhoods and offices 24 hours a day. (22)
