

Cell Phone Radiation Side Effects

Bernstein Liebhard LLP Reports On Study That Finds More Cell Phone Radiation Side Effects

Dr. Hugh Taylor and a team of researchers from the Yale School of Medicine conducted the study, which was published in Scientific Reports.

"We have shown that behavioral problems in mice that resemble ADHD are caused by cell phone exposure in the womb. The rise in behavioral disorders in human children may be in part due to fetal cellular telephone irradiation exposure."

Smart meters allow 'massive collection of personal data', EU watchdog warns

By David Meyer, 11 June, 2012 12:03

Smart meters could be used to build extensive profiles of the households using them, Europe's privacy regulator has warned. The European Data Protection Supervisor (EDPS) said in a statement on ...

Smart Meter Backlash Continues As Vermont Moves to Free Opt-Out ...

The issue: some consumers want nothing to do with *smart meters*, either because of health concerns about the wireless technology or because of the potential for privacy invasion; and they do not want to pay extra to keep traditional meters.

EMF Fundraiser runs into difficulties

The expedition, Pie In The Sky, saw the team raise £40,000 for the Radiation Research Trust, a charity set up by former Samworth Brothers chief executive Brian Stein to fund research into the possible health risks of electromagnetic fields created by mobile phone masts and other technology.

The effects of invisible waves

The Environmental Health Clinic at Women's College Hospital *June 11, 2012*

The world is becoming dominated by wireless technology which is constantly emanated as micro, radio and extremely low frequency waves through the air. Researchers are studying the effects of constant exposure to these waves and how it impacts the human body.

Cell phones, cell phone towers, wireless internet routers, cordless phones and power lines of all sorts have all been recognized as possible contributors to an environmental health condition called electromagnetic hypersensitivity (EMS) caused by significant exposure from radio waves.

EMS symptoms include poor sleep, fatigue, headache, nausea, dizziness, heart palpitations, memory impairment and skin rashes. Patients' reactions vary, some requiring life-altering changes to minimize exposures as much as possible.

The first step for patients having these symptoms is to see their family physician. From there, they are usually referred to a specialist, like those in the Environmental Health Clinic at Women's College Hospital (WCH). Our experts understand sensitivities like EMS and are diligently trying to further delineate its complexities, educate the medical establishment and manage patients.

That's why on May 23, our Environmental Health Clinic hosted physicians, experts and patients at WCH for a day of interactive lectures, to share and discuss ideas about the issues surrounding EMS.

Oakville family shields home from cell tower

Guglietti claimed some of the rooms on the second floor, which are closest to and in line with the cell antennas, were found to contain 15,000 microwatts of electromagnetic energy per square metre.

Guglietti said she is concerned about these readings because of the potential health impacts of long-term exposure to cell-tower emissions.

She cited a study conducted in Brazil in 2011, which found that people who lived near cell towers, experienced a higher rate of mortality from cancer than those who lived more than 500 metres away from cell towers.
