

**Plastic surgery or ortho?**  
Your patients will want this.

## DENTOFACIAL ORTHODONTICS

*Improve patients' dentofacial harmony past the standard of orthodontics*

Students will gain tools only available at POS to solve any problem and be able to treat some of the world's most difficult cases. Your orthodontic care will surpass the current standards, even by the specialty. Students have this one-time opportunity to study with Progressive Orthodontics' founder, Dr. Don McGann.

**Series Tuition** (4 seminars, 4 days) **Location: Kuala Lumpur, Malaysia**  
 S\$ 8,000 by 15 December 2013 23-26 January, 2014 7-10 June, 2014  
 S\$ 8,500 thereafter 10-13 April, 2014 9-12 August, 2014  
 S\$ 2,200 Pay as you go

*Previous Advanced Series: FREE RETAKE policy applies if you paid for and previously attended an "advanced" seminar series, even though the content is completely new. Before taking Section 4, some preparation is needed.*

Section 4 assumes the understanding and ability in:

- Dental VTO predictions
- Surgical VTO predictions, 1 and 2 jaw with pre-surgical dental vto
- "Easy" skeletal anchorage: anterior intrusions, minimum anchorage, midline shifts, molar anchorage.
- Anchorage planning by the dots
- Range of bracket torque templates to diagnose the best bracket torque
- Range of bracket torque templates to determine skeletal resistance
- G6 treatment plan editing including screenshots

**Preparation to Section 4 (Live Seminars)**  
Mandatory Seminars for under G6 Series Graduates

**SEMINAR 9:** 26-29 September, 2013  
S\$ 400.00 (Payment on or before 30 July, 2013)

**SEMINAR 10:** 21-24 November, 2013  
S\$ 400.00 (Payment on or before 30 September, 2013)

**ADA CERP** | Continuing Education Recognition Program

# SECTION 4: DENTOFACIAL ORTHODONTICS

“SECTION 4 Dentofacial Orthodontics” involves personal study of principles that will enable you to change the lives of your patients forever. Dentofacial Orthodontics will expand your treatment options that are above the level currently delivered by the specialty. We will teach you the effective techniques that your patients will prefer to invasive surgery. Learn how to favorably change the appearance of your patients. Isn't that what they wanted when they asked you to 'straighten their teeth'? There is much more you can do for many of your cases, and patients will pay more for this better service (often two or three times the fees set for just 'orthodontics').

This series is recommended for all Progressive Orthodontics “basic series” graduates. There are no prerequisites for case experience to study at this level. You will personally diagnose and treatment plan one case per day, with extra cases presented as time permits. It is YOU that needs to learn to do the work on these cases, making the tough decisions and treatment plans for the unusual circumstances.

*Study with the highest blend of educational and clinical resources*

## TREATMENT PLANS

ONLY as a participant in this training, you will be issued the FULL SET of G6 treatment plans, which include skeletal anchorage and growth management.

## GROWTH MANAGEMENT SOFTWARE

Dr. McGann's *individual growth* prediction and growth management software will be issued to you ONLY as a participant of Section 4 training. This valuable tool will enable you to more effectively treat your growing cases, increasing the number of non-extraction treatment decisions as you create growth management dental VTO predictions.

### SEMINAR 13:

#### *Zygomatic Buttress Skeletal Anchorage, Line of Force Planning & Corticotomies*

Learn how to get predictable and consistent results using the zygomatic buttress for anchorage, a fantastic “up and back” location to apply force to the upper dental arch. Change the lives of your patients as you command 2-3 times the orthodontic fee. You will also learn when cases should have orthognathic surgery and when they can be better treated with minor, in-office procedures like corticotomies and skeletal anchorage.

- How to diagnose and plan zygomatic buttress skeletal anchorage
- Management of possible complications
- Plan line of force for predictable and consistent results
- Introduction to upper and lower anterior corticotomy
- When and when not to add a corticotomy to the treatment
- Corticotomy location and treatment mechanics utilizing skeletal anchorage
- Extending the limits of tooth movement to where orthodontic surgery can be avoided

### SEMINAR 14:

#### *Individual Growth Prediction and Management & Growing Class II and III*

Individual growth prediction? Impossible, right? No, it is reality. Predict growth on an individual patient basis and improve your treatment plans for growing patients. Excel in growth management by using new VTO tools with the McGann Growth Management software. Thoroughly and effectively analyzing growth is possibly McGann's greatest development. This had been an unsolved problem in the specialty for more than 100 years.

- Individual growth prediction and management is now a reality
- Make treatment plans more effective on your growing patients
- Vertical growth management
- Dentofacial vs. orthognathic approaches to the growing class III patient
- Class II growth management for more non extraction treatments
- “Pivot” mechanics and more zygomatic buttress capabilities
- Growth management VTO using the McGann Growth Management software

## STUDENT MEMORY STICK

Packed full with IPSOFT files, instructional videos, videos from the clinic, and background documentation.

## SURGEONS' REFERRAL MANUAL

Covering “complicated” skeletal anchorage and corticotomy, this manual will improve communication with your surgeon on cases where you do not wish to provide the surgical service yourself. It covers the reasoning, how to, and complications of 14 different procedures. If you choose to provide these services, this manual will be a resource for you as you plan the procedure(s).

### SEMINAR 15:

#### *Total Maxillary Impaction and Retraction, Mandible Auto-Rotation & Distalization of the Upper Arch*

Learn how to make “impossible” changes in the facial appearance of your patients through cutting edge diagnosis. This includes multiple closed coils applied to bone plates, distalizing the entire upper arch without extraction and correcting gingival display beyond what you learned in Section 3 of the basic series. You are now capable of using the latest Dentofacial Orthodontic systems to levels never imagined.

- Multiple coils for total maxillary impaction and retraction
- Auto-rotation of the mandible for a better appearance
- Distalizing the entire upper dental arch without extraction, even in skeletal open bite cases
- Correct gingival display using anterior and posterior intrusion and retraction when the entire maxilla has super-erupted
- How to apply multiple closed coils to bone plates to change facial appearance previously impossible

## IAT TRAINING

Designed to closely follow the live series, the IAT website will enable you to review what was taught in the classroom, and then study MORE cases, MORE literature, and MORE optional study materials. All classroom materials can be downloaded to your computer.

## STREAMING VIDEO OF THE SEMINARS

Dr. McGann's intensive series (Nov-Dec 2012) will be videotaped, and available by streaming video. After gaining access through POS administration, you can use these videos for review or as your primary learning of Section 4. If used for primary learning, be sure to request to download the study materials from the IAT website.

### SEMINAR 16:

#### *Use All Your Tools: Molar Intrusion, Major Vertical Changes, Multiple Extractions, with Hands-On Wire Bending*

You are now a Dentofacial Orthodontic expert, treatment planning beyond the usual orthodontic (straighten teeth) approach. You will be handsomely rewarded for your extra effort and training. Bring consistent quality to your cases by practicing finishing beyond what you know from the basic series. Let it all out as you now have tools that are only available at POS. Surgery case? No problem. Corticotomy, skeletal anchorage, TMD, asymmetry, etc. You now have the tools to solve any problem.

- Use all your tools to correct some of the world's most difficult cases
- You now have tools that are only available at POS
- Surgery, corticotomy, skeletal anchorage, TMD, asymmetry, pre-implant ortho
- Molar intrusion, cleft palate, major vertical changes, multiple extractions... anything and everything!
- Hands-on exercises: case finishing, wire bending, and archform manipulations

**GRADUATION DINNER AFTER THE SEMINAR. We have come a long way since Seminar 1. This is the time to celebrate your new knowledge that no one can take from you.**
