What we're looking for:

Modernize is seeking an experienced, creative UI developer to lead front end development of our new web application and supporting websites. Our mission is to create an engaging user experience and brand that homeowners will come to know and love. You'll join a collaborative team of software and QA engineers in a dynamic, fast-paced Agile Scrum environment. As an expert in JavaScript, CSS3/Sass, HTML5 and Responsive Design, you enjoy working closely with the product design team to imagine the best user experience possible. You build beautiful web experiences drawing from industry leaders and contribute best practices by staying fresh on the latest technologies.

What you will be doing:

- Develop highly functional User Interfaces for enterprise web and mobile sites based on mockups, wireframes, design artifacts, product and technical requirements
- Bring and develop best practices and new technologies to support UI engineering
- Participate in the refinement and ideation of user interface designs and interactions
- Promote design consistency across products by creating style guides and other user interface related standards documentation
- Collaborate with cross functional teams to implement highest quality user interfaces

Who you are:

- Stellar written and interpersonal communication skills
- Excellent problem solving and extremely detail oriented
- Desire to contribute to design ideas, overall usability, interactivity and user experience

What you will need:

- 7+ years of professional experience developing enterprise level software, websites and/or mobile applications
- Proficient in cross browser UI development
- Proficient with many of the major cross-browser JavaScript libraries
- Familiarity with web applications based on MVC design pattern
- Ability to interpret technical requirements and implement UI based on design artifacts and mockups
- Experience with the AWS cloud environment preferred
- Linux administration skills preferred
- Knowledge of Atlassian Jira, Confluence, Stash and HipChat preferred
