

The **IPPC Logo**: if you don't see it, don't use it!
 Even if a pallet may be perfectly safe without this logo,
 it could also mean that it was treated with chemicals!

**SOME TREATMENT CODES
 ON PALLETS TO LOOK FOR:**

[HT] = Heat treatment

[KD] = Kiln Dried.

[DB] = Debarked

[MB] = Methyl bromide fumigation (Pesticide chemical)

Do not use it for your craft projects or as firewood, find a waste-removal company who can dispose of it properly.

**How to Tell
 If a Pallet Board Is Safe for Reuse?**

[MB]: Methyl bromide fumigation, this is a powerful pesticide (that has been linked to human health problems and ozone layer depletion) used to treat the wood to kill off invasive species like pine beetles.
