# 1 Introduction

This document summarizes the status of the release

1. IMR version 1.6, rolled out on January 10<sup>th</sup> , 2012;

## 2 Main features in this release

All new features have been document in IMR online help (see help topic “New features in version 1.6”). Note the documentation and new features of this release are available in English language only.

### 2.1 Related indicators

One can now related indicators as being similar to each other or retire indicators by choosing an indicator as a replacement for an obsolete definition.

### 2.2 Harmonization features

The advanced search now allows to search by "undefined" properties to find indicators lacking some classifications. A new comparison report let user quickly print a PDF of similar indicators for comparison purposes. Administrators also have the ability to bulk replace one classification with another.

### 2.3 SDMX Codelist and Template management

In the administration section, one can manage custom SDMX code lists outside of indicator definitions (e.g. geographical places) and assemble these code lists into custom SDMX templates on a profile by profile basis.

### 2.4 Metadata browser

The new browse metadata menu lets users browse published code lists and download them as XML, CSV and SDMX.

## 3 Issues fixed in this release

The following list of issues is extracted from WHO's issue tracking tool available at <https://workspace.who.int/sites/IMR/Lists/Issue%20List/AllItems.aspx> Issues fixed in this release have been tagged with version = 1.6.

Consult the issue tracking tool for a list of known issues or pending change requests.

Issue #	Title / comments
15	Cloning indicators
37	Compare indicators across profiles
61	Dictionary with codelists
92	Codelist Maintenance
165	Import of GHO metadata into IMR.
174	Bulk replace
185	Dictionary Report
189	Warnings
199	Configuration of graph
222	Ambiguous message for indicator deletion.
237	Page numbers
241	Codelist download
252	Statistics font size
256	Add to set
266	Error message when deleting property.
268	Translation import
295	Count of indicators
296	Select all
297	Retired status
320	Edit Set
331	Reference Table Creation
332	Reference Table Organization

341	Bulk Load
342	Bulk Add to Set
345	Version number not shown

## 4 Known issues in this release

### 4.1 Metadata browser

- The download of public code lists as XML, CSV and SDMX does not work due to a server configuration issue that is being investigated by b-i.

For the complete list of known issues or pending change requests., consult the WHO issue tracking tool available at:
