UI Designer at Hapara

http://hapara.com/about-us/#redwood

This is your opportunity to help design beautiful data products for schools. If you're passionate about web apps, data visualization and education, we'd love to talk to you. Hapara is looking for a UI designer (contract or full time) to join the Hapara Insight team to help us design simple yet powerful web apps for educators. We are using data to help educators and students have deeper conversations about learning, and we need a motivated individual with skills in user research and UI design to make these insights visible.

You will be responsible for interpreting user research and translating these into UI designs for a number of components within Hapara's data platform. You will work closely with the product manager to analyse user needs, design compelling visualizations and validate solutions with users.

Essential Duties and Responsibilities:

- Work with product management to define & test features/ functionality/user interactions for the product experience and build the product backlog
- Produce high level concepts, wireframes, prototypes and user flows for user testing. Plan and conduct user testing and synthesise findings for the product team
- Create compelling pixel-perfect mockups, visual specifications, and assets for user stories in queue
- Work closely with development team in Boulder to understand technical feasibility, and ensure designs are understood and implemented with quality
- Collaborate with the UX team in Auckland, New Zealand to establish and promote design guidelines, best practices and standards; design a pattern library with templates, UI components, and visual assets
- Constantly explore innovative ways of visualizing big data
- Collaborate with marketing teams for trade show and marketing campaign collateral
- Occasional travel might be needed to work with engineering team in Boulder, CO

Required Experience and Skills:

- Bachelor's Degree in web or design-related field
- 5+ years of experience in user interface design for web
- 2+ years experience designing data products and a passion for data visualization
- Proficiency in Photoshop, Sketch, Axure or other visual design and wireframing tools
- Up-to-date with the latest UI trends, techniques, and technologies
- Experience working in an Agile/Scrum development process
- The ability to build your designs into solid front-end templates using HTML/CSS and JavaScript is highly desirable but not mandatory

To apply, send your resume to **jobs@hapara.com**
